Acronyms and abbreviations

Preface

This document lists and describes messages output by Hitachi Device Manager (abbreviated hereafter to *Device Manager*), Hitachi Replication Manager (abbreviated hereafter to *Replication Manager*), and Hitachi Tiered Storage Manager (abbreviated hereafter to *Tiered Storage Manager*), and provides recommended actions for the error conditions.

This preface includes the following information:

- Intended audience
- Product version
- Release notes
- Document organization
- Related documents
- Document conventions
- Conventions for storage capacity values
- Accessing product documentation
- Getting help
- Comments

Intended audience

This document is intended for storage administrators who use Hitachi Command Suite to operate and manage storage systems, and assumes that readers have:

- Basic knowledge about Storage Area Networks (SANs)
- Basic operational knowledge about the prerequisite OS and Web browser
- Knowledge necessary to operate and manage systems by using Hitachi Command Suite

Product version

This document revision applies to Hitachi Device Manager, Hitachi Replication Manager, and Hitachi Tiered Storage Manager v8.5 or later.

Release notes

Read the release notes before installing and using this product. They may contain requirements or restrictions that are not fully described in this document or updates or corrections to this document. Release notes are available on Hitachi Data Systems Support Connect: https://knowledge.hds.com/Documents.

Document organization

The following table provides an overview of the contents and organization of this document. Click the chapter title in the left column to go to that chapter. The first page of each chapter provides links to the sections in that chapter.

Chapter	Description
Chapter 1, Overview of messages on page 1-1	Describes the format and types of messages.
Chapter 2, Messages output by Device Manager, Tiered Storage Manager, and Replication Manager on page 2-1	Describes messages related to Device Manager, Tiered Storage Manager, and Replication Manager.
Chapter 3, Alerts output by Device Manager on page 3-1	Lists and describes the alerts output by Device Manager.
Chapter 4, Error codes for the Device Manager agent on page 4-1	Describes the error codes output by the Device Manager agent.
Chapter 5, Messages output by storage systems on page 5-1	Lists and describes the messages output by storage systems.

Document conventions

This document uses the following typographic conventions:

Convention	Description
Bold	• Indicates text in a window, including window titles, menus, menu options, buttons, fields, and labels. Example: Click **OK**. • Indicates a emphasized words in list items.
Italic	• Indicates a document title or emphasized words in text. • Indicates a variable, which is a placeholder for actual text provided by the user or for output by the system. Example: `pairdisplay -g group` (For exceptions to this convention for variables, see the entry for angle brackets.)
`Monospace`	Indicates text that is displayed on screen or entered by the user. Example: `pairdisplay -g oradb`
< > angled brackets	Indicates a variable in the following scenarios: • Variables are not clearly separated from the surrounding text or from other variables. Example: `Status-<report-name><file-version>.csv` • Variables in headings.
[ ] square brackets	Indicates optional values. Example: [a | b] indicates that you can choose a, b, or nothing.
{ } braces	Indicates required or expected values. Example: {a | b} indicates that you must choose either a or b.
| vertical bar	Indicates that you have a choice between two or more options or arguments. Examples: [a | b] indicates that you can choose a, b, or nothing. { a | b } indicates that you must choose either a or b.

This document uses the following icons to draw attention to information:

Icon	Label	Description
	Note	Calls attention to important or additional information.
	Tip	Provides helpful information, guidelines, or suggestions for performing tasks more effectively.
	Caution	Warns the user of adverse conditions or consequences (for example, disruptive operations).
	WARNING	Warns the user of severe conditions or consequences (for example, destructive operations).

Conventions for storage capacity values

Physical storage capacity values (for example, disk drive capacity) are calculated based on the following values:

Physical capacity unit	Value
1 kilobyte (KB)	1,000 (10^3) bytes
1 megabyte (MB)	1,000 KB or $1{,}000^2$ bytes
1 gigabyte (GB)	1,000 MB or $1{,}000^3$ bytes
1 terabyte (TB)	1,000 GB or $1{,}000^4$ bytes
1 petabyte (PB)	1,000 TB or $1{,}000^5$ bytes
1 exabyte (EB)	1,000 PB or $1{,}000^6$ bytes

Logical storage capacity values (for example, logical device capacity) are calculated based on the following values:

Logical capacity unit	Value
1 block	512 bytes
1 cylinder	Mainframe: 870 KB Open-systems: • OPEN-V: 960 KB • Others: 720 KB
1 KB	1,024 (2^{10}) bytes
1 MB	1,024 KB or $1{,}024^2$ bytes
1 GB	1,024 MB or $1{,}024^3$ bytes
1 TB	1,024 GB or $1{,}024^4$ bytes
1 PB	1,024 TB or $1{,}024^5$ bytes
1 EB	1,024 PB or $1{,}024^6$ bytes

Accessing product documentation

Product documentation is available on Hitachi Data Systems Support Connect: https://knowledge.hds.com/Documents. Check this site for the most current documentation, including important updates that may have been made after the release of the product.

Getting help

Hitachi Data Systems Support Connect is the destination for technical support of products and solutions sold by Hitachi Data Systems. To contact technical

support, log on to Hitachi Data Systems Support Connect for contact information: https://support.hds.com/en_us/contact-us.html.

Hitachi Data Systems Community is a global online community for HDS customers, partners, independent software vendors, employees, and prospects. It is the destination to get answers, discover insights, and make connections. **Join the conversation today!** Go to community.hds.com, register, and complete your profile.

Comments

Please send us your comments on this document: doc.comments@hds.com. Include the document title and number, including the revision level (for example, -07), and refer to specific sections and paragraphs whenever possible. All comments become the property of Hitachi Data Systems Corporation.

Thank you!

1

Overview of messages

This chapter describes the format and types of messages.

- Message syntax
- Format and types of message IDs
- Terms used in this manual

Message syntax

Device Manager, Tiered Storage Manager, and Replication Manager messages are output to the GUI, CLI, and log files. An output message consists of a message ID and message text. Note that some components also output a date, time, and program name to messages.

Format and types of message IDs

Message IDs have the following format:

PREFIXnnnnn-Z

The message ID consists of the following components:

PREFIX

Indicates the component that outputs the message. For details about the prefixes and which components they refer to, see Table 1-1 Prefixes and message ID types on page 1-2.

nnnnn

The message sequence number.

Z

Indicates the message type. Note that messages whose prefix begins with DRM-, KAID, or RPM- do not output the message type. The following shows message types and their meanings.

`I(Information)`: Notifies the user of information.

`Q(Question)`: Prompts the user to respond.

`W(Warning)`: Notifies the user that processing will continue but with certain restrictions.

`E(Error)`: Notifies the user that processing cannot continue due to an error.

Table 1-1 Prefixes and message ID types

Prefix	Descriptions of message IDs
DRM-	Messages related to Replication Manager Application Agent
KAIB	Messages related to the installer for Hitachi Command Suite products
KAIC	Messages related to Device Manager The following shows message numbers and corresponding functions: KAIC00000 - KAIC09999: Messages related to server functionality KAIC10000 - KAIC19999: GUI-related messages KAIC20000 - KAIC29999: Messages related to Device Manager agents KAIC30000 - KAIC39999: Trace messages KAIC60000 - KAIC69999: Trace messages KAIC70000 - KAIC79999: GUI-related messages KAIC90000 - KAIC99999: CLI-related messages

Prefix	Descriptions of message IDs
KAID	Alerts output by Device Manager
KAIE	Messages related to the Device Manager agent
KAIG	Messages related to Host Data Collector
KAPM	Messages related to Hitachi Command Suite Common Component
KAQB	Messages related to file servers. For details about these messages, see the message documentation for the file server.
KAQG	
KAQK	
KAQM	
KATS	Messages related to Tiered Storage Manager The following shows message numbers and corresponding functions: KATS10000 - KATS19999: CLI-related messages KATS20000 - KATS39999: GUI-related messages KATS40000 - KATS99999: Messages related to server functionality
KAVN	Messages related to Replication Manager The following shows message numbers and corresponding functions: KAVN00000 - KAVN00199: Common messages KAVN00200 - KAVN00399: GUI-related messages KAVN00400 - KAVN00799: Messages related to server functionality KAVN01800 - KAVN01899: Messages related to Device Manager agents KAVN02300 - KAVN02499: Common messages KAVN02500 - KAVN02999: Messages related to server functionality KAVN03000 - KAVN03399: Messages related to Replication Manager Application Agent KAVN10000 - KAVN19999: Messages related to audit log data
KAVX	Messages related to Replication Manager Application Agent
KDJE	Messages related to Hitachi Command Suite Common Component
KFPA	Messages related to HiRDB
KFPC	
KFPD	
KFPH	
KFPI	
KFPK	
KFPL	
KFPO	
KFPR	
KFPS	

Prefix	Descriptions of message IDs
KFPU	
KFPX	
RPM-	Messages related to Replication Manager The following shows message numbers and corresponding functions: RPM-00000 - RPM-00199: Common messages RPM-00200 - RPM-00399: GUI-related messages RPM-00400 - RPM-00599: Messages related to server functionality RPM-00600 - RPM-00799: Messages related to monitoring functionality RPM-00800 - RPM-00999: Messages related to database functionality RPM-01000 - RPM-01199: Messages related to Device Manager RPM-01400 - RPM-01599: Messages related to Business Continuity Manager and Mainframe Agent RPM-01600 - RPM-01799, RPM-03300 - RPM-03499: Messages related to Device Manager agents RPM-03700 - RPM-04099: Messages related to Replication Manager Application Agent RPM-04500 - RPM-04999: Messages related to server functionality RPM-10000 - RPM-29999: Messages related to Replication Manager Application Agent

Recommended actions are described in Chapter 2 and subsequent chapters. For errors whose recommended action is "Contact the Support Center.", a detailed investigation is required to determine the cause and resolve the problem. See the *Hitachi Command Suite Administrator Guide* or the *Hitachi Command Suite Replication Manager Configuration Guide* to collect maintenance information, and then contact customer support.

Terms used in this manual

The following table list terms in this manual that differ from terms used in Hitachi Command Suite products and other manuals.

Table 1-2 Correspondence between terms used in this manual and terms used in others

Terms used in this manual	Terms used in Hitachi Command Suite products and other manuals
Array group	Parity group
Array family	• Family of the storage system • Storage system family
Array name	Storage system name
Backup	Replica
Disk	Drive

Terms used in this manual	Terms used in Hitachi Command Suite products and other manuals
Host storage domain	Host group
PDEV	Drive
RAID Manager	CCI
Storage subsystem	Storage system
Subsystem	Storage system

This manual refers to the components of the Dynamic Provisioning functionality as follows:

- A DP pool of Hitachi Dynamic Tiering (HDT) is referred to as an HDT pool.
- A DP pool volume of Hitachi Dynamic Provisioning (HDP) is referred to as an HDP pool volume.
- A DP volume of Hitachi Dynamic Tiering (HDT) is referred as an HDT volume.

2

Messages output by Device Manager, Tiered Storage Manager, and Replication Manager

This chapter describes messages related to Device Manager, Tiered Storage Manager, and Replication Manager.

- Messages with IDs beginning with DRM
- Messages with IDs beginning with KAIB
- Messages with IDs beginning with KAIC
- Messages with IDs beginning with KAIE
- Messages with IDs beginning with KAIG
- Messages with IDs beginning with KAPM
- Messages with IDs beginning with KAQ*x*
- Messages with IDs beginning with KATS
- Messages with IDs beginning with KAVN
- Messages with IDs beginning with KAVX
- Messages with IDs beginning with KDJE
- Messages with IDs beginning with KFP*x*

- Messages with IDs beginning with RPM

Messages with IDs beginning with DRM

This section describes messages related to Replication Manager Application Agent.

Causes and actions to take for messages with IDs beginning with DRM might differ depending on the environment in which Replication Manager is used. If you use Replication Manager from GUI, see the information under *(For GUI)* in the *Description* column. If you use Replication Manager from the CLI, see the information under *(For CLI)* in the *Description* column.

DRM-10000 - DRM-19999

The following table describes messages related to Replication Manager Application Agent (DRM-10000 - DRM-19999).

Table 2-1 DRM-10000 - DRM-19999: messages output by Replication Manager Application Agent

Message ID	Message Text	Description
DRM-10000	An error occurred during exclusive processing.	*(For GUI)* *Cause* Exclusive processing was attempted because another operation was in progress, but the attempt failed. *Action* Wait a while, and then retry the operation. *(For CLI)* *Cause* An error occurred because another command was executing at the time of command execution even though exclusive processing (locking) was specified. *Action* Wait a while and then re-execute the command.
DRM-10001	The specified file is being used.	*(For GUI)* *Cause* Processing could not continue. The file to be restored was being used. *Action* Wait a while, and then retry the operation. *(For CLI)* *Cause* Since a file to be restored is being used, restore processing cannot continue.

Message ID	Message Text	Description
		Action Wait a while, and then re-execute the command.
DRM-10002	An internal error occurred.	*(For GUI)* *Cause* An unknown internal error occurred, either because the information in a dictionary map file or backup catalog was inconsistent or damaged, or because an unknown internal error occurred during execution of an OS system call. *Action* Use the following procedure to check the Application Agent operating environment: 1. Make sure that the RAID Manager instance that will communicate with the RAID Manager instance specified by Setup Application Agent Wizard has already started. 2. Make sure that the instance number specified in the Setup Application Agent Wizard is valid. 3. Make sure that the RAID Manager configuration definition file (`horcm`*n*`.conf`) is valid. If there is no problem in the Application Agent operating environment, check the appropriate troubleshooting section of the product manual, collect the necessary information, and then contact the Support Center. To perform a recovery, you must uninstall the product, and then re-install it. *(For CLI)* *Cause* An unknown internal error occurred because the information in a dictionary map file or backup catalog has lost conformity or was damaged. Or, an unknown internal error occurred during execution of an OS system call. *Action* Check the Replication Manager Application Agent operating environment using the following procedure:

Message ID	Message Text	Description
		1. Make sure that the RAID Manager instance that will communicate with the RAID Manager instance specified by the `HORCMINST` parameter of the RAID Manager linkage definition file (`DEFAULT.dat`) has already started. 2. Make sure that the instance number specified by the `HORCMINST` parameter of the RAID Manager linkage definition file (`DEFAULT.dat`) is appropriate. 3. Make sure that the RAID Manager configuration definition file (`horcm`*n*`.conf`) is correct. If there is no problem in the Replication Manager Application Agent operating environment, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect the necessary data, and then contact your support center.
DRM-10003	An attempt to obtain a backup ID failed.	*(For GUI)* *Cause* Replica information could not be acquired. The Replication Manager Application Agent data is corrupted. *Action* Check the appropriate troubleshooting section of the product manual, collect the necessary information, and then contact the Support Center. To perform a recovery, you must uninstall the product, and then re-install it. *(For CLI)* *Cause* The system could not obtain a backup ID because the information in a dictionary map file or a backup catalog became mismatched or corrupted. *Action* Refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect the necessary data, and then contact your support center. To recover, you must uninstall Replication Manager Application Agent and then re-install it.

Message ID	Message Text	Description
DRM-10004	The backup information associated with the specified backup ID does not exist.	*(For GUI)* *Cause* The replica details associated with the specified replica do not exist. *Action* Update the host information, and then retry the operation. *(For CLI)* *Cause* During an operation such as restoration or displaying backup information, the backup information associated with the backup ID that was specified by the command did not exist. *Action* Specify the correct backup ID and then re-execute the command.
DRM-10008	The pair status of the copy group is invalid.	*(For GUI)* *Cause* The command cannot be executed because the pair status of the copy group is invalid. Consider the following possible causes: 1. A program other than Replication Manager was used to change the pair volume status. 2. The user executed an invalid operation. 3. An error occurred on the storage system. *Action* Perform one of the following, based on the corresponding cause: 1. If a program other than Replication Manager has been used to change the status of the pair volume, use the CCI `pairsplit` command to change the copy group pair status to PSUS, and then re-execute the command. 2. If the user has executed an invalid operation, restore a backup from a tape or make another backup of the primary volume, and then correct the data in the secondary volume.

Message ID	Message Text	Description
		3. If an error occurred in the storage system, check the system log, and then check whether there is a message that indicates that an error has been output for the target volume. If any error messages are found, resolve the error. *(For CLI)* *Cause* The command cannot be executed because the pair status of the copy group is invalid. Possible causes are as follows: 1. The pair status of the copy group became invalid because a program other than Replication Manager Application Agent changed the status of the paired volume. 2. The user performed an invalid operation. 3. An error occurred in the storage system. *Action* Take one of the following actions: 1. If a program other than Replication Manager Application Agent changed the paired volume status, change the pair status of the copy group to PSUS by using the `pairsplit` command of RAID Manager, and then re-execute the command. 2. If the user performed an invalid operation, restore backup data from the tape or take backup copies of the primary volume again to create correct secondary volume data. To take backup copies, take one of the following actions: - If all of the following three conditions are satisfied, change the pair status of the copy group to PAIR or PSUS by using the `paircreate` command of RAID Manager, and then execute the command: - KAVX5106-E and KAVX5118-E are displayed at the same time. - The pair status displayed in KAVX5118-E is PAIR or PSUS.

Message ID	Message Text	Description
		- The pair status of the copy group displayed in KAVX5106-E is SMPL. - If all of the following three conditions are satisfied, change the pair status of the copy group to PSUS or SMPL by using the `pairsplit` command of RAID Manager, and then execute the command: - KAVX5107-E and KAVX5118-E are displayed at the same time. - The pair status displayed in KAVX5118-E is PSUS or SMPL. - The pair status of the copy group displayed in KAVX5106-E is PAIR. 3. If an error occurred in the storage system, examine the system log, check whether a message is displayed that indicates a target volume error, and then remove the cause of the error.
DRM-10009	An attempt to resynchronize the copy group(s) failed.	*(For GUI)* *Cause* An attempt to resynchronize a copy group while performing a backup or restore has failed. *Action* See the Replication Manager manual and check whether Replication Manager Application Agent is properly configured. *(For CLI)* *Cause* During backup or restore processing, the system failed to resynchronize the copy group(s). *Action* Refer to the RAID Manager log information and follow the directions in the RAID Manager manual to remove the error caused by the RAID Manager command failure, and then re-execute the Replication Manager Application Agent command. The error might have been caused by the configuration or settings for execution of Replication Manager Application Agent. Check the configuration and settings by referring to the following items in the manual

Message ID	Message Text	Description
		Replication Manager Application Agent CLI User Guide: • Application Agent System Configurations • Volume Configurations Usable by Application Agent • Setting Up CCI • Setting Up Operation of Application Agent • Setting Up Application Agent for Linkage with CCI
DRM-10010	RAID configuration information could not be obtained.	*(For GUI)* *Cause* A CCI command was unable to obtain the RAID configuration information. *Action* Check the appropriate CCI manual to eliminate the problem that caused the CCI command to fail, and then retry the operation. *(For CLI)* *Cause* A command of RAID Manager could not obtain the RAID configuration information. *Action* Refer to the RAID Manager log information and follow the directions in the RAID Manager manual to remove the error caused by the RAID Manager command failure, and then re-execute the Replication Manager Application Agent command. The error might have been caused by the configuration or settings for execution of Replication Manager Application Agent. Check the configuration and settings by referring to the following items in the manual *Replication Manager Application Agent CLI User Guide*: • Application Agent System Configurations • Volume Configurations Usable by Application Agent • Setting Up CCI • Setting Up Operation of Application Agent

Message ID	Message Text	Description
		• Setting Up Application Agent for Linkage with CCI
DRM-10011	A timeout error occurred.	*(For GUI)* *Cause* A timeout occurred during copy group resynchronization processing. *Action* Make sure that the storage devices are not overloaded, and then retry the operation. *(For CLI)* *Cause* During backup or restore processing, a timeout error occurred because it took a long time to check the pair status of the copy group. If KAVX5106-E is displayed, you can obtain the error target copy group name and the current pair status from the displayed result. *Action* In the manual *Replication Manager Application Agent CLI User Guide*, see the explanation for retry count and retry interval settings for checking a pair status, and then reconfigure the retry count and retry interval. If KAVX5119-E is displayed, reset the value of the displayed parameter.
DRM-10012	The target file system cannot be locked.	*Cause* During online backup processing, an error occurred in the lock processing for a file system in VxFS of Solaris. *Action* Examine the Replication Manager Application Agent trace log files and the system log, and check whether any output messages show errors in the file system.
DRM-10013	An attempt to obtain the installation path has failed.	*(For GUI)* *Cause* An attempt to obtain information about the product installation path has failed, because the product was not installed properly on a Windows system. *Action* Uninstall the product temporarily, and then re-install it. If the same problem

Message ID	Message Text	Description
		occurs after re-installation, contact the Support Center. *(For CLI)* *Cause* The system could not obtain the Replication Manager Application Agent installation path because Replication Manager Application Agent was not installed correctly in the Windows system. *Action* First uninstall Replication Manager Application Agent, and then re-install it.
DRM-10014	The specified copy group does not exist.	*(For GUI)* *Cause* The copy group registered as backup information was not found in the current configuration. *Action* Make sure the copy group is properly defined. If the copy group does not exist in the current configuration, check the CCI configuration definition file and make sure the CCI configuration definitions are correct. *(For CLI)* *Cause* The copy group registered as backup information was not found in the current configuration. Possible causes are as follows: • If KAVX5120-E is displayed, the copy group of the displayed result is not defined in the current configuration. • If KAVX5121-E is displayed, no target copy group is defined in the current configuration. *Action* Make sure that the target copy group has been defined correctly by following the procedure below: 1. Check the copy group registered in the backup information, by using the following commands: - When the backup is of a file system: `drmfscat` command

Message ID	Message Text	Description
		- When the backup is of an SQL Server database: `drmsqlcat` command - When the backup is of an Exchange database: `drmexgcat` command 2. Check the current configuration by using the following commands: - When the backup is of a file system: `drmfsdisplay` command - When the backup is of an SQL Server database: `drmsqldisplay` command - When the backup is of an Exchange database: `drmexgdisplay` command 3. If the copy group does not exist in the current configuration, check the RAID Manager configuration definition files and determine if the RAID Manager configuration definition is set correctly.
DRM-10015	An attempt to obtain RAID information failed.	*(For GUI)* *Cause* RAID configuration information could not be obtained while the setup files used by Replication Manager Application Agent were being updated. Alternatively, an attempt was made to update the setup files on the backup server. *Action* It is not necessary to update the setup files on the backup server. If this message was output on the database server, perform the following: 1. See the CCI log information, and check whether any CCI commands have failed. If a CCI command has failed, remove the cause of the problem by correcting the CCI configuration definition file (`horcm`*n*`.conf`) as described in the CCI manual, and then retry the operation. 2. See the manual, and make sure Replication Manager Application Agent is properly configured. *(For CLI)*

Message ID	Message Text	Description
		Cause The RAID configuration information could not be obtained when the dictionary map file was updated, or the backup server attempted to update the dictionary map file. If this message was output together with the KAVX0272-E message, it means that the configuration information could not be obtained on the backup server when executing the backup command with the `-svol_check` option specified. *Action* The backup server does not need to update the dictionary map file. If the database server outputs this message, check the following: • Refer to the RAID Manager log information to check whether the RAID Manager command has failed. If the RAID Manager command has failed, follow the directions in the RAID Manager manual to correct the RAID Manager configuration definition file (`horcm`*n*`.conf`) and remove the cause of the error, and then re-execute the Replication Manager Application Agent command. • Make sure that configuration and settings for using Replication Manager Application Agent are correct. For details on the configuration and settings, refer to the following items in the manual *Replication Manager Application Agent CLI User Guide*: Application Agent System Configurations Volume Configurations Usable by Application Agent Setting Up CCI Setting Up Operation of Application Agent Setting Up Application Agent for Linkage with CCI • In an environment using Hi-Copy or Cross-system Copy, check whether a pair has been created in error while the Hi-Copy or Cross-system Copy pair volume

Message ID	Message Text	Description
		was online. For details, see the operational procedure in the RAID Manager manual. • If this message was output together with the KAVX0272-E message and the backup command was executed with the –svol_check option specified, check whether a message indicating abnormality was output to the event log of the backup server. Execute the command again after removing the error cause.
DRM-10016	An attempt at mounting failed.	*Cause* During backup or restore processing, an attempt at mounting failed because the mount point directory did not exist or the drive had already been mounted. If KAVX5122-E is displayed, the displayed result indicates the incorrect logical volume. *Action* Check the Replication Manager Application Agent operating environment by using the following procedure: 1. Make sure that the RAID Manager instance that will communicate with the RAID Manager instance specified by the HORCMINST parameter of the RAID Manager linkage definition file (DEFAULT.dat) has already started. 2. Make sure that the instance number specified by the HORCMINST parameter of the RAID Manager linkage definition file (DEFAULT.dat) is appropriate. 3. Make sure that the RAID Manager configuration definition file (horcm*n*.conf) is correct. If there is no problem in the Replication Manager Application Agent operating environment, make sure that the following are true: • During the backup/restore processing on the primary volume, neither the mount operation nor the tape backup/restore operation was executed on the secondary volume.

Message ID	Message Text	Description
		• The `drmmount` command was not mistakenly executed on the primary volume. • The specification of the mount point directory is correct. If the setup of the mount point directory is correct, examine the system log and check whether there is any problem with the OS. See the notes on mounting, in the manual *Replication Manager Application Agent CLI User Guide*.
DRM-10017	The specified path has already been mounted.	*Cause* Processing could not continue because the specified drive to be mounted was already mounted at the time of backup or restore processing. *Action* Unmount the drive that has been mounted, and then re-execute the command. If the same error still occurs, examine the system log and check whether there is any problem with the OS.
DRM-10018	The specified path is invalid.	*(For GUI)* *Cause* Some information does not match between the Replication Manager server and Replication Manager Application Agent. *Action* Update host information, and then retry the operation. *(For CLI)* *Cause* The path name specified for backup with the `-target` option or `-f` option is invalid. *Action* Specify the correct path name and then re-execute the command.
DRM-10019	An attempt at unmounting failed.	*Cause* An attempt to unmount the drive failed during execution of backup or restore processing. If KAVX5122-E or KAVX5123-E is displayed, the displayed result indicates the incorrect logical volume. *Action*

Message ID	Message Text	Description
		Check the Replication Manager Application Agent operating environment by using the following procedure: 1. Make sure that the RAID Manager instance that will communicate with the RAID Manager instance specified by the HORCMINST parameter of the RAID Manager linkage definition file (DEFAULT.dat) has already started. 2. Make sure that the instance number specified by the HORCMINST parameter of the RAID Manager linkage definition file (DEFAULT.dat) is appropriate. 3. Make sure that the RAID Manager configuration definition file (horcm*n*.conf) is correct. 4. If this message is displayed when a backup or restore operation is being performed for the primary volume, and the cluster software is Veritas Cluster Server for Windows, make sure that the cluster information registered by using the drmclusinit command has been set correctly. If there is no problem in the Replication Manager Application Agent operating environment, make sure that the following are true: • During the backup/restore processing on the primary volume, neither the mount operation nor the tape backup/restore operation was executed on the secondary volume. • No drive that is to be unmounted is being used. • The work directory used to execute the command is not on the drive that is to be unmounted. If the work directory exists on the drive to be unmounted, the drive cannot be unmounted. If the unmounting specification is correct, examine the system log and check whether there is any problem with the OS. See the notes on mounting, in the manual *Replication*

Message ID	Message Text	Description
		Manager Application Agent CLI User Guide.
DRM-10020	An attempt to generate a pair of the copy group failed.	*(For GUI)* *Cause* An attempt to generate a copy group pair failed while performing a backup or restoration. *Action* See the CCI log information, and remove the cause of the problem as described in the CCI manual, and then retry the operation. If the error occurs again, see the Replication Manager manual, and make sure Replication Manager Application Agent is properly configured. *(For CLI)* *Cause* During backup or restore processing, the system failed to generate a pair of the copy group. If KAVX5120-E is displayed, the displayed result indicates the incorrect copy group. *Action* Refer to the RAID Manager log information and follow the directions in the RAID Manager manual to remove the error caused by the RAID Manager command failure, and then re-execute the Replication Manager Application Agent command. The error might have been caused by the configuration or settings for execution of Replication Manager Application Agent. Check the configuration and settings by referring to the following items in the manual *Replication Manager Application Agent CLI User Guide*: • Application Agent System Configurations • Volume Configurations Usable by Application Agent • Setting Up CCI • Setting Up Operation of Application Agent • Setting Up Application Agent for Linkage with CCI

Message ID	Message Text	Description
DRM-10021	An attempt to resynchronize the pair of the copy group failed.	*(For GUI)* *Cause* An attempt to resynchronize a copy group pair failed while performing a backup or restoration. *Action* See the CCI log information, and remove the cause of the problem as described in the CCI manual, and then retry the operation. If the error occurs again, see the Replication Manager manual, and make sure Replication Manager Application Agent is properly configured. *(For CLI)* *Cause* During backup or restore processing, the system failed to resynchronize the pair of the copy group. If KAVX5120-E is displayed, the displayed result indicates the incorrect copy group. *Action* Refer to the RAID Manager log information and follow the directions in the RAID Manager manual to remove the error caused by the RAID Manager command failure, and then re-execute the Replication Manager Application Agent command. The error might have been caused by the configuration or settings for execution of Replication Manager Application Agent. Check the configuration and settings by referring to the following items in the manual *Replication Manager Application Agent CLI User Guide*: • Application Agent System Configurations • Volume Configurations Usable by Application Agent • Setting Up CCI • Setting Up Operation of Application Agent • Setting Up Application Agent for Linkage with CCI
DRM-10022	An attempt to split the pair of the copy group failed.	*(For GUI)* *Cause*

Message ID	Message Text	Description
		An attempt to split a copy group pair failed while performing a backup or restoration. *Action* See the CCI log information, and remove the cause of the problem as described in the CCI manual, and then retry the operation. If the error occurs again, see the Replication Manager manual, and make sure Replication Manager Application Agent is properly configured. *(For CLI)* *Cause* During backup or restore processing, the system failed to split the pair of the copy group. If KAVX5120-E is displayed, the displayed result indicates the incorrect copy group. *Action* Refer to the RAID Manager log information and follow the directions in the RAID Manager manual to remove the error caused by the RAID Manager command failure, and then re-execute the Replication Manager Application Agent command. The error might have been caused by the configuration or settings for execution of Replication Manager Application Agent. Check the configuration and settings by referring to the following items in the manual *Replication Manager Application Agent CLI User Guide*: • Application Agent System Configurations • Volume Configurations Usable by Application Agent • Setting Up CCI • Setting Up Operation of Application Agent • Setting Up Application Agent for Linkage with CCI
DRM-10023	An attempt to reconfigure the drive information failed.	*Cause* During backup or restore processing, the system failed to reconfigure the logical volume manager's drive information. *Action*

Message ID	Message Text	Description
		If the message is displayed during the mount/unmount or tape backup/tape restore processing of the secondary volume, determine if a processing using the secondary volume or a processing using a disk group including the secondary volume exists. If the message is displayed during the backup or restore processing between volumes, examine the Replication Manager Application Agent operating environment by using the following procedure: 1. If the physical drive volume used in the backup or store processing belonged in the rootdg disk group. 2. If an error data on the logical volume manager was output in the trace log of the logical volume manager. If the physical drive belonged in the rootdg disk group, delete the physical drive subject to the backup or restore processing from the rootdg disk group.
DRM-10026	The status of the copy group could not be obtained.	*(For GUI)* *Cause* An attempt to obtain the status of a copy group pair failed while performing a backup or restoration. *Action* If the instance to be backed up is stopped, start the instance. See the Replication Manager manual, and make sure Replication Manager Application Agent is properly configured. *(For CLI)* *Cause* During backup or restore processing, the system could not obtain the status of the copy group. If KAVX5120-E is displayed, the displayed result indicates the incorrect copy group. The status of the copy group cannot be obtained when: • The instance to be backed up has stopped. • The copy group containing the object to be backed up is managed by multiple RAID Manager instances.

Message ID	Message Text	Description
		Action Check the Replication Manager Application Agent operating environment by using the following procedure: 1. Make sure that the RAID Manager instance that will communicate with the RAID Manager instance specified by the HORCMINST parameter of the RAID Manager linkage definition file (DEFAULT.dat) has already started. 2. Make sure that the instance number specified by the HORCMINST parameter of the RAID Manager linkage definition file (DEFAULT.dat) is appropriate. 3. Make sure that the RAID Manager configuration definition file (horcm*n*.conf) is correct. When there is no problem in the operating environment of Replication Manager Application Agent check whether the setup of RAID Manager or definition file is correct. If the setup is correct, examine the log information of RAID Manager and check whether there is any problem. Depending on the reason that the pair status of the copy group cannot be obtained, take appropriate action from the following: • Start the instance if the instance to be backed up has stopped. • When the copy group containing the object to be backed up is managed by multiple RAID Manager instances, modify the contents of the definition file.
DRM-10027	Two or more logical drive exist on one physical drive.	*(For GUI)* *Cause* A backup cannot be performed because the physical drive contains multiple logical drives, one of which corresponds to the mount point directory of the backup. *Action* Change the volume configuration by using a logical volume manager. *(For CLI)*

Message ID	Message Text	Description
		Cause Backup cannot be performed because there are two or more logical drives on the physical drive that has the logical drive corresponding to the mount point directory to be backed up. *Action* Use a logical volume manager to change the volume configuration.
DRM-10028	The specified file or directory does not exist on the RAID device.	*(For GUI)* *Cause* The path of a file or directory specified for the backup does not exist on any RAID devices. *Action* Specify a path that exists on a RAID device, and then retry the operation. *(For CLI)* *Cause* The path name of a file or a directory that was specified with the `-target` option or `-f` option does not exist on the RAID device. *Action* Specify the path name on the RAID device and then re-execute the command.
DRM-10031	Two or more mount points exist in the same copy group.	*(For GUI)* *Cause* A backup cannot be performed because the physical drive contains multiple logical drives, one of which corresponds to the mount point directory of the backup. *Action* Use a logical volume manager to change the volume configuration to a configuration that can be backed up. *(For CLI)* *Cause* Backup cannot be performed because there are two or more logical drives on the physical drive that has the logical drive corresponding to the mount point directory to be backed up. *Action*

Message ID	Message Text	Description
		Use a logical volume manager to change the volume configuration to a configuration allowing backup.
DRM-10032	The specified file or directory is not backed up.	*(For GUI)* *Cause* The specified file or directory has not been backed up. *Action* Check the backed up file or directory, specify the correct path name, and then re-execute the restore operation. *(For CLI)* *Cause* A file or directory path name specified with the `-target` option or `-f` option at the time of execution of a restore command is invalid. *Action* Check the backup file or directory, specify a correct path name, and then re-execute the restore command.
DRM-10033	The path of the specified file or directory is invalid.	*(For GUI)* *Cause* The path of the specified file or directory is invalid. *Action* Check the backed up file or directory, specify the correct path name, and then re-execute the restore operation. *(For CLI)* *Cause* The path name of the file or directory specified with the `-target` option or `-f` option at the time of execution of a restore command was invalid. *Action* Check the specified file or directory for which backup was executed, and then re-execute the command.
DRM-10034	The file system associated with the specified instance is not mounted.	*Cause* The file system associated with the instance specified at the time of backup or restore processing was not mounted. *Action*

Message ID	Message Text	Description
		Mount the file system to be backed up or restored, and then re-execute the command.
DRM-10035	Primary volume(s) and secondary volume(s) are mixed in the same logical disk group.	*(For GUI)* *Cause* A logical disk group contains both primary and secondary volumes. This type of volume configuration cannot be backed up or restored. *Action* Place the primary volumes and secondary volumes in separate disk groups, and then re-execute the operation. *(For CLI)* *Cause* The primary volume(s) and the secondary volume(s) of the copy group are in one logical disk group. *Action* With this volume configuration, Replication Manager Application Agent cannot perform backup or restore processing. Separate the primary volumes and the secondary volumes into other disk groups, and then re-execute the command.
DRM-10036	The object specified to be backed up cannot determine the backup destination secondary volume.	*(For GUI)* *Cause* A copy group could not be identified during a backup. *Action* Using CCI, correctly define the copy group, and then retry the operation. *(For CLI)* *Cause* This message is output when the copy group cannot be determined for one of the following reasons during a backup: Possible causes are as follows: • When the cause in KAVX5124-E is DRM-10082 In the current configuration, no copy group is defined in the volume specified as the backup target. • When the cause in KAVX5124-E is DRM-10099

Message ID	Message Text	Description

		No available copy groups exist because the copy groups are locked.
		• When the cause in KAVX5124-E is DRM-10300
		No selectable copy group is defined. Alternatively, only copy groups of an unsupported copy type are defined.
		• When the cause in KAVX5124-E is DRM-10301
		The number of copy groups in the disk group differs for each physical drive.
		Action
		Depending on the cause, take appropriate action from the following:
		• When the cause in KAVX5124-E is DRM-10082
		Use RAID Manager to define a copy group, and then re-execute the command.
		• When the cause in KAVX5124-E is DRM-10099
		Execute the following command to check the copy group of the volume specified to be backed up, use the `drmcgctl` command to unlock the copy group, and then re-execute the command:
		- When the backup is of a file system:
		`drmfsdisplay -cf`
		- When the backup is of an SQL Server database:
		`drmsqldisplay -cf`
		- When the backup is of an Exchange database:
		`drmexgdisplay -cf`
		• When the cause in KAVX5124-E is DRM-10300
		Use RAID Manager to define a copy group, and then re-execute the command.
		Execute the following command to check whether the Replication Manager Application Agent supports the copy type, and then re-execute the command:

Message ID	Message Text	Description

		- When the backup is of a file system:
		`drmfsdisplay -cf`
		- When the backup is of an SQL Server database:
		`drmsqldisplay -cf`
		- When the backup is of an Exchange database:
		`drmexgdisplay -cf`
		• When the cause in KAVX5124-E is DRM-10301
		Use RAID Manager to define a copy group, and then re-execute the command.

DRM-10037	The name of mount point directory is too long.	*(For GUI)* *Cause* The name of the specified mount point directory exceeds 255 characters. *Action* Specify a mount point directory that is 255 characters or less. *(For CLI)* *Cause* The length of the specified mount-point-directory name exceeded 255 characters. *Action* This program can only handle mount-point-directory names of 255 or fewer characters.
DRM-10038	The name of disk group is too long.	*(For GUI)* *Cause* The name of the specified disk group exceeded 28 characters. *Action* For a disk group name, specify 28 characters or less. *(For CLI)* *Cause* The disk group name exceeds the maximum length. Specify the disk group name by using the maximum number of characters or fewer. *Action* The maximum number of characters of the disk group name is 28.

Message ID	Message Text	Description
DRM-10039	The secondary volumes to be processed are already mounted.	*(For GUI)* *Cause* Some information does not match between the Replication Manager server and Replication Manager Application Agent. *Action* Update host information, and then retry the operation. *(For CLI)* *Cause* An attempt was made to perform backup or restoration, but the secondary volumes to be backed up or restored are already mounted. *Action* Unmount all secondary volumes to be backed up or restored.
DRM-10040	The cluster resource could not be placed offline.	*(For GUI)* *Cause* In a cluster environment, a cluster resource could not be placed offline. *Action* Check whether there is a problem with the cluster software. *(For CLI)* *Cause* In a cluster environment, an attempt to place the cluster resource offline has failed. *Action* Make sure of the following: • If the cluster software is Veritas Cluster Server for Windows Check whether the cluster information registered by using the `drmclusinit` command is set correctly. If the OS is Windows Server 2003, check whether the startup type of the Windows Management Instrumentation service is Disabled. If it is Disabled, return it to Manual or Automatic, and then re-execute the command. • For all cluster software products

Message ID	Message Text	Description
		Make sure that there are no problems with the cluster software. If there is no problem, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect the necessary data, and then contact your support center.
DRM-10041	The cluster resource could not be placed online.	*(For GUI)* *Cause* In a cluster environment, a cluster resource could not be placed offline. *Action* Check whether there is a problem with the cluster software. *(For CLI)* *Cause* In a cluster environment, an attempt to place the cluster resource online has failed. *Action* Make sure of the following: • When this message is displayed with KAVX5137-E Refer to the cause and action of KAVX5137-E. • If the cluster software is Veritas Cluster Server for Windows Check whether the cluster information registered by using the `drmclusinit` command is set correctly. • For all cluster software products Make sure that there are no problems with the cluster software. If there is no problem, refer to the troubleshooting explanation in the manual*Replication Manager Application Agent CLI User Guide*, collect the necessary data, and then contact your support center.
DRM-10042	An attempt to execute the chkdsk command on the primary volume(s) failed.	*(For GUI)* *Cause* In a cluster environment, an attempt to execute the `chkdsk` operation on the primary volumes has failed. *Action*

Message ID	Message Text	Description
		See the system log, and check whether a problem has occurred. *(For CLI)* *Cause* In a cluster environment, an attempt to execute the `chkdsk` command on the primary volume(s) failed. *Action* Check the system logs to confirm whether a problem exists. If there is no problem, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect the necessary data, and then contact your support center.
DRM-10043	An attempt to obtain the cluster information failed.	*(For GUI)* *Cause* An attempt to check whether the specified mount point exists on a cluster server failed. *Action* Check whether there is a problem with the cluster software. *(For CLI)* *Cause* An attempt to check whether the specified mount point exists on the cluster server failed. *Action* Make sure that there are no problems with the cluster software. If there is no problem, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect the necessary data, and then contact your support center.
DRM-10045	A cluster volume and a non-cluster volume exist in the same logical disk group.	*(For GUI)* *Cause* A logical disk group contains both cluster volumes and non-cluster volumes. A resynchronize restoration cannot be performed in this configuration. *Action* Unify all of the volumes in the logical disk group as either cluster volumes or

Message ID	Message Text	Description
		non-cluster volumes, and then retry the operation. *(For CLI)* *Cause* Within one logical disk group, volumes being managed by the cluster server are mixed with those that are not. Resynchronized restoration cannot be performed under this configuration. *Action* Decide whether all volumes existing in the logical disk group are to be managed by the cluster server of not, and execute the command.
DRM-10047	An attempt to perform the resynchronize restoration failed.	*(For GUI)* *Cause* The files to be restored are insufficient. *Action* Add restoration targets so that all files are subject to restoration. *(For CLI)* *Cause* When the files to be restored were specified, some of the files to be backed up were not specified. *Action* If the KAVX5125-E message is displayed, unspecified file names and their disk group names are contained in the displayed result. The disk group names are displayed in the environment where the logical volume manager is installed. In the basic disk configuration, – is displayed for a disk group name. Specify all the files that were backed up when you specify the files to be restored, and then re-execute the command.
DRM-10049	An attempt to synchronize the file system failed.	*(For GUI)* *Cause* This might be due to the following: If the DRM-10302 message is displayed at the same time, an attempt to obtain the volume name based on the mount point name has failed.

Message ID	Message Text	Description
		If the DRM-10303 message is displayed at the same time, an attempt to flush the relay buffer for the file system has failed. If the DRM-10304 message is displayed at the same time, an attempt to open the logical volume for performing a flush has failed. *Action* Check the system logs, and make sure that no abnormal messages are output for the target file system. If the problem persists, contact the Support Center. *(For CLI)* *Cause* Examine the system log and check whether error messages have been output for the file system. • When the cause in KAVX5126-E is DRM-10302: Processing to obtain the volume name based on the mount point name has failed. • When the cause in KAVX5126-E is DRM-10303: An attempt to flush the intermediate buffer of the file system has failed. • When the cause in KAVX5126-E is DRM-10304: An attempt to flush the intermediate buffer has failed. *Action* Examine the system log, check whether error messages have been output for the file system, and then remove the cause of the error.
DRM-10050	The specified mount point is already mounted.	*(For GUI)* *Cause* A resynchronization or restoration is being performed for a cluster directory that was mounted manually. *Action* Unmount the mount point that is the restoration target. *(For CLI)* *Cause*

Message ID	Message Text	Description
		Because a file system managed as a cluster resource by the cluster software has already been mounted, restoration by resynchronization cannot be performed. *Action* To perform restoration by drive resynchronization in a cluster environment, unmount the file system you want to restore, and then re-execute the command.
DRM-10052	An attempt to start RAID Manager failed.	*(For GUI)* *Cause* An attempt to start CCI has failed. *Action* Check the settings for the RAID management software. If the settings are correct, check the log information for the RAID management software, and make sure that there are no problems. If the problem cannot be determined, contact the Support Center. *(For CLI)* *Cause* An instance of RAID Manager could not be started. If KAVX5127-E is displayed, the displayed result indicates the number of the instance that could not be started. If the displayed instance number is –, an incorrect instance number was specified in the `HORCMINST` parameter of the RAID Manager linkage definition file (`DEFAULT.dat`). *Action* Check the Replication Manager Application Agent operating environment by using the following procedure: 1. Make sure that the RAID Manager instance that will communicate with the RAID Manager instance specified by the `HORCMINST` parameter of the RAID Manager linkage definition file (`DEFAULT.dat`) has already started.

Message ID	Message Text	Description
		2. Make sure that the instance number specified by the HORCMINST or HORCMINST_AUX parameter of the RAID Manager linkage definition file (DEFAULT.dat) is appropriate. 3. If the environment variable DRM_HORCMINST or DRM_HORCMINST_AUX is specified, make sure that the instance number set to the environment variable is also specified for either HORCMINST or HORCMINST_AUX parameter in the RAID Manager linkage definition file (DEFAULT.dat). 4. Make sure that the RAID Manager configuration definition file (horcm*n*.conf) is correct. When there is no problem in the Replication Manager Application Agent operating environment, examine the RAID Manager trace log and configuration definition files, and check whether the configuration definitions are correct.
DRM-10053	An attempt to stop RAID Manager failed.	*(For GUI)* *Cause* An attempt to stop CCI has failed. *Action* Check the settings for the RAID management software. If the settings are correct, check the log information for the RAID management software, and make sure that there are no problems. If the problem cannot be determined, contact the Support Center. *(For CLI)* *Cause* An instance of RAID Manager could not be stopped. *Action* If KAVX5127-E is displayed, the displayed result indicates the number of the instance that could not be stopped. Examine the RAID Manager trace log and check whether there is any problem.

Message ID	Message Text	Description
DRM-10054	The path configuration for the primary volume(s) and secondary volume(s) is invalid.	*(For GUI)* *Cause* Many secondary volume physical paths have been set for the primary volume, for a multi-path configuration. *Action* Set the number of secondary volume physical paths to be less than or equal to the number of primary volume physical paths set. *(For CLI)* *Cause* This message is output when, in a multi-path configuration of the logical volume manager, the number of physical paths specified for the secondary volume(s) is greater than that of the primary volume(s). *Action* Set the physical paths for the secondary volume(s) in such a manner that they are equal to less than the number of physical paths for the primary volume(s).
DRM-10055	An attempt to restore the volume group information failed.	*(For GUI)* *Cause* An attempt to recover volume group information has failed. *Action* Re-register the volume group information on the backup server. *(For CLI)* *Cause* This message is output when the volume group information in the logical volume manager cannot be restored. The volume group cannot be recognized from the backup server because the management information about the volume group in the logical volume manager is rewritten. *Action* Use the logical volume manager on the backup server to register the management information about the volume group.
DRM-10058	The system detected the same copy group(s).	*(For GUI)* *Cause*

Message ID	Message Text	Description
		The same copy group is specified in the CCI configuration definition file, on different instances. *Action* Make sure that CCI copy group names are unique. If they overlap, change the CCI settings so that the copy group names are unique, and then restart. *(For CLI)* *Cause* This message is output when different instances describe the same copy group name in the RAID Manager configuration definition file. *Action* Check whether the same copy group is configured in RAID Manager. If the same copy group exists, change the RAID Manager settings so as not to configure the same copy group, and then restart RAID Manager.
DRM-10059	An error occurred in the processing of the definition file (DEFAULT.dat) to link with the RAID management software.	*(For GUI)* *Cause* A product was not properly installed on a Windows system, or the files related to CCI and used by Replication Manager Application Agent do not exist, or contain invalid contents. *Action* Make sure that the files related to CCI and used by Replication Manager Application Agent exist. If the files do not exist, uninstall and then re-install Replication Manager Application Agent. If the files exist, make sure that their contents are valid, and then retry the operation. If the problem cannot be resolved, contact the Support Center. *(For CLI)* *Cause* This message is output when the product has not been installed correctly and the RAID Manager linkage definition file (`DEFAULT.dat`) was not found, or when there is an incorrect description in the RAID Manager linkage definition file (`DEFAULT.dat`). *Action* Check whether the RAID Manager linkage definition file (`DEFAULT.dat`)

Message ID	Message Text	Description
		exists. If it does not exist, copy the DEFAULT.dat.model file (which should exist in the same directory as the one that should contain the DEFAULT.dat file) as DEFAULT.dat, and then correct the contents of the file. If the DEFAULT.dat.model file also does not exist, uninstall Replication Manager Application Agent and then reinstall it. If the RAID Manager linkage definition file (DEFAULT.dat) exists, check the contents of the file and try to access the file again. If the same error occurs, contact your support center.
DRM-10061	The target copy group is managed by a different RAID Manager instance.	*(For GUI)* *Cause* The target copy group is managed by a different instance. *Action* The target copy group needs to be managed by a single instance of CCI. Make sure that the CCI settings are correct, and set for the correct instance, and then execute the command again. *(For CLI)* *Cause* The copy group to be backed up or restored needs to be managed in one RAID Manager instance. *Action* Check whether the setup of RAID Manager is correct, set up the correct instance, and then re-execute the command.
DRM-10062	Two or more logical drive exist under the target mount point.	*(For GUI)* *Cause* A directory within the target mount point contains a mount point corresponding to another logical drive. *Action* Processing cannot continue, because a directory within the mount point of the processing target contains a mount point corresponding to another logical drive. Check the volume configuration. *(For CLI)* *Cause*

Message ID	Message Text	Description
		The mount point directory contains a mount point that corresponds to another logical drive. *Action* Check the volume configuration. If KAVX5132-E is displayed, the displayed mount point is the highest-order mount point where the error occurred. For example, when an error occurs in the following cases: If two mount points (`E:` and `E:\mnt`) exist, you cannot specify mount point `E:`. Change the configuration of the volumes to be backed up.
DRM-10063	A secondary volume is being managed by the primary volume's host.	*(For GUI)* *Cause* Both the primary volume and secondary volume of a copy group are managed as volumes on the host on which the command was executed. *Action* Processing cannot continue, because both the primary volume and secondary volume of a copy group are managed as volumes on the host on which the command was executed. *(For CLI)* *Cause* The primary and secondary volumes of the copy group are managed by the same command executing host. *Action* Assign separate command executing hosts to the primary and secondary volumes, and then execute the command.
DRM-10064	Two or more mount points exist on one physical drive.	*(For GUI)* *Cause* The physical drive mounted to the target mount point is mounted to another mount point. *Action* Processing cannot continue, because another mount point exists in the volume mounted to the mount point of the processing target. Check the volume configuration. *(For CLI)*

Message ID	Message Text	Description
		Cause The mount point drive is mounted at another mount point. *Action* Check the volume configuration.
DRM-10065	The target volume's ldev or serial number is inconsistent between the backup information and the current configuration.	*(For GUI)* *Cause* The LDEV number or serial number of the processing target volume, as registered as backup information, is not consistent with the current configuration. *Action* Processing cannot continue, because the LDEV number or serial number of the processing target volume, which was registered as backup information, is not consistent with the current configuration. Make sure that the volume configuration has not changed since backup. Check the volume configuration during backup, and use the CCI commands to check the current volume configuration. *(For CLI)* *Cause* The current configuration does not indicate the logical device or serial number of the volume subject to backup information processing. If KAVX5128-E is displayed, the displayed result indicates the LDEV number and the SERIAL number of the processing target volume registered in the backup catalog. The disk group name is displayed in the environment where logical volume manager is installed. In the basic disk configuration, – is displayed for a disk group name. *Action* Make sure that there is no change to the volume configuration during backup processing with the following procedure: 1. Execute one of the following commands specifying the `-l` option, and then check the volume configuration at the time of the backup: - When the backup is of a file system:

Message ID	Message Text	Description
		`drmfscat` command - When the backup is of an SQL Server database: `drmsqlcat` command - When the backup is of an Exchange database: `drmexgcat` command 2. Check the current volume configuration by using a method such as a RAID Manager command. If you are executing the restore operation forcibly, such as when the logical device number is changed by replacing a volume, execute the command with the `-force` option specified.
DRM-10066	The character string of the target mount point exceeds the maximum number of characters.	*(For GUI)* *Cause* The name for the mount point directory to be processed exceeds the maximum length. *Action* Processing cannot continue, because the name for the mount point directory to be processed exceeds the maximum length. Check the length of the string for the mount point directory name. *(For CLI)* *Cause* Processing cannot continue, because the name of the target mount point directory is too long. *Action* Check the length (number of characters) of the mount point directory name.
DRM-10067	The name of the target logical volume is too long.	*(For GUI)* *Cause* The name of the logical volume to be processed is too long. *Action* Processing cannot continue, because the name of the logical volume to be processed exceeds the maximum length. Check the length of the string for the logical volume name. *(For CLI)*

Message ID	Message Text	Description
		Cause Processing cannot continue, because the logical volume name to be processed is too long. *Action* Check the length (number of characters) of the logical volume name. The maximum number of characters for the logical volume name is the maximum number of characters that can be specified in the OS.
DRM-10069	An attempt to acquire copy group information has failed.	*(For GUI)* *Cause* An attempt to acquire copy group information by using RAID management software failed. *Action* Check the RAID management software settings. If the settings are correct, see the RAID management software log information, and check whether there is a problem. If no problem exists, contact the Support Center. *(For CLI)* *Cause* This message is output when an attempt to acquire copy group information by using the RAID Manager command fails. *Action* Refer to the RAID Manager log information and follow the directions in the RAID Manager manual to remove the error caused by the RAID Manager command failure, and then re-execute the Replication Manager Application Agent command. The error might have been caused by the configuration or settings for execution of Replication Manager Application Agent. Check the configuration and settings by referring to the following items in the manual *Replication Manager Application Agent CLI User Guide*: • Application Agent System Configurations • Volume Configurations Usable by Application Agent • Setting Up CCI

Message ID	Message Text	Description
		• Setting Up Operation of Application Agent • Setting Up Application Agent for Linkage with CCI
DRM-10070	A copy group for which a pair was not generated was specified when the dictionary map file was updated.	*(For GUI)* *Cause* A copy group with the Simplex pair status was backed up or resynchronized when a file used by Replication Manager Application Agent was updated. *Action* Perform pair generation for the target copy group, and then update the host information. *(For CLI)* *Cause* This message is output when the copy group whose pair status is SMPL is backed up or resynchronized while the dictionary map file is being updated. *Action* Use the RAID Manager `pairresync` command to change the pair status to PAIR, and then update the dictionary map file.
DRM-10071	The pair status has been changed to the SMPL mode.	*(For GUI)* *Cause* A copy group with the Simplex pair status was backed up or restored without an appropriate parameter specified for a file used by Replication Manager Application Agent. *Action* Either delete the definition of the target pair logical volumes from the CCI configuration definition file and files used by Replication Manager Application Agent, or specify the `PAIR_CREATE=ENABLE` parameter in the configuration definition file and files used by Replication Manager Application Agent. *(For CLI)* *Cause* This message is output when backup or resynchronization is performed for a copy group whose pair status is SMPL, without the `PAIR_CREATE=ENABLE` parameter being set in the RAID

Message ID	Message Text	Description
		Manager linkage definition file (`DEFAULT.dat`). *Action* Perform one of the following operations: • Delete the target pair logical volume definition from the RAID Manager configuration definition file (`horcm`*n*`.conf`). • Update the dictionary map file with the `PAIR_CREATE=ENABLE` parameter set in the RAID Manager linkage definition file (`DEFAULT.dat`). • Use the following operation to lock and remove the copy group from operations: `drmcgctl -copy_group` *copy-group-name* `-mode lock`
DRM-10073	The volume replication function of the specified copy group is not supported.	*(For GUI)* *Cause* A paired volume (a copy group) with an unsupported copy type has been specified in a command. *Action* The specified copy group uses an unsupported volume replication function. A paired volume with a copy type of Hi-Copy / Cross-system copy cannot be specified in a command. Check the copy type of the copy group. *(For CLI)* *Cause* The copy group is using a volume replication function that is not supported by Replication Manager Application Agent. The copy type cannot be used for pair volumes of Hi-Copy / Cross-system Copy. *Action* Check the copy type of the copy group specified. If KAVX5120-E is displayed, the displayed result indicates the incorrect copy group.
DRM-10074	The target volume is protected.	*(For GUI)* *Cause*

Message ID	Message Text	Description
		A command is executing for a protected target volume. *Action* Check the volume access attribute of the RAID management software, change the access permissions, and then re-execute the command. *(For CLI)* *Cause* This message is output when a command is executed with the data protection status set in the target volume. *Action* Check the access attribute of the volume by using the RAID Manager command, and then re-execute the command after canceling access restrictions.
DRM-10075	The target copy group was not found.	*(For GUI)* *Cause* The target copy group does not exist in the current configuration. *Action* • If VSS is being used, check the instance number set for the `VSHTCHORCMINST_REMOTE` system environment variable. • Make sure the target copy group is defined in the CCI configuration definition file (`horcm`*n*`.conf`). • Make sure that the instance number has been defined for the CCI configuration definition file (`horcm`*n*`.conf`) that contains the copy group specified in the `HORCMINST` parameter in the CCI linkage definition file (`DEFAULT.dat`). *(For CLI)* *Cause* This message is output when the target copy group does not exist in the current configuration. *Action* Perform one of the following operations: • When the VSS functionality is being used, check the RAID Manager instance number

Message ID	Message Text	Description
		specified in the system environment variable VSHTCHORCMINST_REMOTE. • Make sure that the target copy group has been defined in the RAID Manager settings. • Check whether the instance number of the RAID Manager configuration definition file (horcm*n*.conf) where the target copy group is written is defined in the HORCMINST parameter of the RAID Manager configuration definition file (DEFAULT.dat).
DRM-10076	An error occurred in the execution of a RAID management software command.	*(For GUI)* *Cause* An error occurred while a CCI command was being executed. *Action* Check the RAID management software settings. If the settings are correct, see the RAID management software log information, and check whether a problem has occurred. *(For CLI)* *Cause* This message is output if an error occurs when a RAID Manager command is being executed. *Action* Refer to the RAID Manager log, and check whether there are any problems.
DRM-10077	RAID management software has not been started.	*(For GUI)* *Cause* The target CCI instance is stopped. *Action* Check the RAID management software settings. If the settings are correct, see the RAID management software log information, and check whether a problem has occurred. *(For CLI)* *Cause* This message is displayed when the target RAID Manager instance has stopped. *Action*

Message ID	Message Text	Description
		Perform either of the following operations: • Start the RAID Manager instance if the target RAID Manager instance has stopped. • Start the RAID Manager instance if the RAID Manager instance has stopped on the database server. If the RAID Manager instance cannot be started, refer to the RAID Manager log and check whether there are any problems.
DRM-10080	The volume to be processed as the primary volume is the secondary volume.	*(For GUI)* *Cause* The local volume of the processing target copy group was changed to the secondary volume when a file used by Replication Manager Application Agent was updated. *Action* Change the local volume to the primary volume. *(For CLI)* *Cause* This message is displayed when a local volume in the target copy group has been changed to the secondary volume after updating the dictionary map file. *Action* To set the target volume to the primary volume, see the manual *Replication Manager Application Agent CLI User Guide*.
DRM-10081	Copy groups that used different volume replication functions cannot be specified at the same time.	*Cause* This message is output when the copy group using the volume replication function within the storage system and the copy group using the volume replication function between storage systems are specified at the same time. *Action* Correct the settings so that copy types of the copy group described in the copy-group list file are not simultaneously specified, and then re-execute the command. To check the copy type, use the following command:

Message ID	Message Text	Description

		• When the resynchronization is of a file system:
		`drmfsdisplay -cf`
		• When the resynchronization is of an SQL Server database:
		`drmsqldisplay -cf`
		• When the resynchronization is of an Exchange database:
		`drmexgdisplay -cf`

DRM-10082	The specified generation identification name is invalid.	*(For GUI)*
		Cause
		There is no copy group with the specified target generation name (generation ID).
		Action
		Check the target generation name (generation ID), and then retry the operation.
		(For CLI)
		Cause
		The copy group with the specified generation identifier does not exist.
		Action
		Check the generation identifier by executing the following commands, and then re-execute the command:
		• When a file system is to be backed up:
		`drmfsdisplay -cf`
		• When an SQL Server database is to be backed up:
		`drmsqldisplay -cf`
		• When an Exchange database is to be backed up:
		`drmexgdisplay -cf`

DRM-10083	An error occurred during preparatory processing that is required for linkage with RAID management software.	*(For GUI)* *Cause* An error occurred during load processing for a file used by Replication Manager Application Agent. *Action* Perform one of the following: 1. If this message is output at the same time as the KAVX5100-E message, make sure that none of the files used by Replication

Message ID	Message Text	Description
		Manager Application Agent are missing. 2. If this message is output at the same time as the KAVX5102-E message, check the contents of the related files used by Replication Manager Application Agent, specify the `output` parameters, and execute the command again. *(For CLI)* *Cause* An error occurred during processing to read the RAID Manager linkage definition file or the copy parameter definition file. Possible causes are as follows: • When KAVX5100-E is output at the same time The copy parameter definition file name that was specified in the `-pf` option is either incorrect or does not exist. • When KAVX5102-E is output at the same time The parameter that was output to the RAID Manager linkage definition file (`DEFAULT.dat`) is not specified. *Action* Depending on the cause, take appropriate action from the following: • When KAVX5100-E is output at the same time Check whether the copy parameter definition file specified in the `-pf` option exists, specify the correct copy parameter definition file name, and then re-execute the command. • When KAVX5102-E is output at the same time Check the contents of the RAID Manager linkage definition file (`DEFAULT.dat`), write the `output` parameter, and then re-execute the command.
DRM-10084	An error occurred during copy group selection.	*(For GUI)* *Cause*

Message ID	Message Text	Description
		An error occurred for copy group selection during backup. *Action* Resolve the cause of the error according to the countermeasures for the previously output message, and then execute the command again. *(For CLI)* *Cause* An error occurred with the selection of the copy group when backup was executed. *Action* Refer to the instructions of the previously output message to resolve the cause of the error, and then re-execute the command.
DRM-10085	An internal error occurred during registry information definition file processing.	*(For GUI)* *Cause* An attempt to load a file used by Replication Manager Application Agent has failed, or the file is corrupted or has been altered. *Action* Re-install Replication Manager Application Agent. If recovery is not performed, check the contents given for troubleshooting in the product manual, collect the appropriate materials, and then contact the Support Center. *(For CLI)* *Cause* Possible causes are as follows: • An attempt to read an internal file (registry information definition file) failed. • The internal file (registry information definition file) was illegally destroyed or altered. *Action* Re-install Replication Manager Application Agent. If the status does not recover, see the descriptions about trouble shooting in the manual *Replication Manager Application Agent CLI User Guide*, collect the relevant information, and then contact your support center.

Message ID	Message Text	Description
DRM-10086	Failed to read the registry in order to acquire information on the software to be linked.	*(For GUI)* *Cause* An attempt to load a registry for obtaining linked software information has failed. *Action* Make sure that the linked software product is installed correctly. Re-install the OS if a problem is found with the registry. *(For CLI)* *Cause* An attempt to read the registry for acquiring linkage software information has failed. *Action* Check whether the software product that links to Replication Manager Application Agent has been installed properly. If a registry problem is found, reinstall the OS.
DRM-10087	Detected multiple installation paths for the software to be linked.	*(For GUI)* *Cause* Multiple installation paths of different versions were found for the linked software. *Action* A product with a different version might have been installed for the linked software. Check the currently installed product, and if multiple versions exist, uninstall the unused versions. Re-install the OS if a problem is found in the registry. *(For CLI)* *Cause* Two or more installation paths with different versions were detected in the software that links to Replication Manager Application Agent. Software products that link to Replication Manager Application Agent might have different versions installed. *Action* Check the versions of the products currently installed. If multiple versions exist, uninstall the unused version.

Message ID	Message Text	Description
		If a registry problem is found, reinstall the OS.
DRM-10088	An attempt to deport the disk group has failed.	*(For GUI)* *Cause* An attempt to deport a disk group created by the logical volume manager has failed. *Action* Use the logical volume manager to check the status of the disk group. If the disk group status cannot be confirmed to be normal, re-create the disk group. Once the disk group malfunction has been resolved, use the logical volume manager to import the disk group, and mount the logical volume again. When this is displayed during backup or restoration, and VERITAS Cluster Server for Windows is used as the cluster product, make sure that the cluster information does not contain any errors. *(For CLI)* *Cause* This message is displayed when an attempt to deport a disk group managed by VxVM fails. If KAVX5131-E is displayed, the displayed result indicates the incorrect disk group. *Action* Check the status of the disk group by using the logical volume manager. If the status of the disk group cannot be confirmed as normal, re-create the disk group. Correct any disk group problems, import the disk group by using the logical volume manager, and then remount the logical volume. If this message is displayed during a backup or restore operation, and the cluster software is Veritas Cluster Server for Windows, make sure that the cluster information registered by using the `drmclusinit` command is correct.
DRM-10089	An attempt to import the disk group has failed.	*(For GUI)* *Cause*

Message ID	Message Text	Description
		An attempt to import a disk group created by the logical volume manager has failed. *Action* Use the logical volume manager to check the status of the disk group. If the disk group status cannot be confirmed to be normal, re-create the disk group. Once the disk group malfunction has been resolved, use the logical volume manager to import the disk group, and mount the logical volume again. *(For CLI)* *Cause* This message is displayed when an attempt to deport a disk group managed by VxVM fails. If KAVX5131-E is displayed, the displayed result indicates the incorrect disk group. *Action* Check the status of the disk group by using the logical volume manager. If the status of the disk group cannot be confirmed as normal, re-create the disk group. Correct any disk group problems, import the disk group by using the logical volume manager, and then remount the logical volume.
DRM-10090	An attempt to acquire the logical volume from the physical drive has failed.	*(For GUI)* *Cause* An attempt to obtain logical volume information has failed. *Action* Use the logical volume manager to check that the logical volume is defined properly on the physical drive. If the logical volume cannot be confirmed to be normal, delete, re-create, and then mount the logical volume. *(For CLI)* *Cause* An attempt was made to acquire logical volume information by using the API of the OS from the physical drive, but it could not be acquired.

Message ID	Message Text	Description
		If KAVX5130-E is displayed, the displayed result indicates the incorrect disk group. *Action* Use the logical volume manager to check whether the logical volume has been correctly defined on the physical drive. If the logical volume cannot be confirmed as normal, delete the logical volume, and then re-create and mount it.
DRM-10091	An attempt to rescan the physical drive has failed.	*(For GUI)* *Cause* An attempt to rescan for physical drive information has failed. *Action* Make sure that Veritas Volume Manager or Logical Device Manager is running properly. If it cannot be confirmed to be running properly, re-install Veritas Volume Manager or the Windows OS. *(For CLI)* *Cause* This message appears when an attempt to rescan physical drive information fails. *Action* Confirm that VxVM is running normally. If confirmation is not possible, reinstall VxVM.
DRM-10097	An attempt to execute the "diskpart" command has failed.	*(For GUI)* *Cause* The `diskpart` command has failed. *Action* Check the system logs, resolve the cause of the `diskpart` failure, and then retry the operation. *(For CLI)* *Cause* This message is output when an attempt to execute the `diskpart` command fails. *Action* Verify the contents of the system log, remove the cause of the unsuccessful

Message ID	Message Text	Description
		`diskpart` command execution, and then re-execute the command.
DRM-10098	No specified copy group exists in the current configuration.	*(For GUI)* *Cause* A copy group from replica creation did not exist during restoration. *Action* Check the detailed message output after this message, and act accordingly. *(For CLI)* *Cause* This message is output if the copy group in the backup catalog does not exist in the current configuration. *Action* A detailed message, output after this message, indicates the cause of the KAVX0006-E message. Check the detailed message, and then take appropriate action to remove the error.
DRM-10099	An optional generation of the copy group cannot be specified.	*(For GUI)* *Cause* No available copy group exists, because the copy groups are locked. *Action* Check the detailed message output after this message, and act accordingly. *(For CLI)* *Cause* This message is output when no usable copy group exists because copy groups are locked. *Action* A detailed message, output after this message, indicates the cause of the KAVX0006-E message. Check the detailed message, and then take appropriate action to remove the error.
DRM-10100	The maximum number of files that the OS can open at one time was exceeded.	*(For GUI)* *Cause* The maximum number of files that can be opened on a system has been reached. *Action*

Message ID	Message Text	Description
		Redefine the OS kernel parameter, and increase the number of files that can be opened by the system. *(For CLI)* *Cause* An attempt was made to open files that exceeded the maximum number that can be opened in the system. *Action* Redefine the OS kernel parameter to increase the maximum number of files that can be opened in the system.
DRM-10101	The dictionary map file is corrupted.	*(For GUI)* *Cause* A file used by Replication Manager Application Agent has been damaged. *Action* Update the host information, and then retry the operation. *(For CLI)* *Cause* The dictionary map file is corrupted. *Action* Use the `drmdbsetup` utility to re-create the dictionary map file.
DRM-10102	The target record is locked.	*(For GUI)* *Cause* A record could not be updated during database update, because it was locked. *Action* Wait a while, and then retry the operation. If the error persists after re-execution, contact the Support Center. *(For CLI)* *Cause* A record to be updated was locked when the attempt was made to update the dictionary map file, so it has not updated. *Action* Wait a while, and then re-execute the command.
DRM-10103	The target file is locked.	*(For GUI)* *Cause*

Message ID	Message Text	Description
		A file could not be updated during a dictionary map file update, because it was locked. *Action* Wait a while, and then retry the operation. If the error persists after re-execution, contact the Support Center. *(For CLI)* *Cause* The file to be updated was locked when the attempt was made to update the dictionary map file, so it has not updated. *Action* Wait a while, and then re-execute the command.

DRM-10104	No target record exists.	*(For GUI)*
		Cause
		A target record could not be viewed, because it does not exist.
		Action
		Make sure that the correct value is specified for the Application Agent setting.
		If the information is correct, update the host information. If the error persists after re-execution, contact the Support Center.
		(For CLI)
		Cause
		A record to be referenced did not exist when the attempt was made to reference the dictionary map file, so it was not referenced.
		Action
		Refresh the contents of the dictionary map file by using following command. Execute the command as follows.
		• When the backup is of a file system:
		`drmfsdisplay -refresh`
		• When the backup is of an SQL Server database:
		`drmsqldisplay -refresh`
		• When the backup is of an Exchange database:
		`drmexgdisplay -refresh`

Message ID	Message Text	Description
DRM-10105	Memory is insufficient.	*(For GUI)* *Cause* Memory was insufficient when the operation was executed. *Action* Increase the amount of memory, and execute the command again. *(For CLI)* *Cause* Memory became insufficient when the command was executed. *Action* Increase available memory, and then re-execute the command.
DRM-10106	An internal error occurred.	*(For GUI)* *Cause* An unknown internal error occurred while internal processing was executing, when a system call was used. *Action* Check the troubleshooting items given in the product manual, collect the appropriate materials, and then contact the Support Center. The product needs to be uninstalled and then re-installed for recovery. *(For CLI)* *Cause* During internal processing, an unknown internal error occurred when a system call was used. *Action* Refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect the necessary data, and then contact your support center. This message might be output if any of the following commands are executed while a backup operation is running: `drmfscat`, `drmsqlcat`, `drmexgcat`, `drmoracat`, or `drmappcat`. If this happens, wait for the backup command to end, and then re-execute the above command.
DRM-10107	The dictionary map file already exists.	*(For GUI)* *Cause*

Message ID	Message Text	Description
		A file is already being used by Replication Manager Application Agent. *Action* Update the host information. If the error persists after re-execution, contact the Support Center. *(For CLI)* *Cause* This message is output if the dictionary map file created during the previous installation still exists when you attempt to create a new dictionary map file in the specified directory by using the `drmdbsetup` utility. *Action* Delete the dictionary map file in the specified directory, and then re-create the dictionary map file by using the `drmdbsetup` utility.
DRM-10108	The dictionary map file cannot be found.	*(For GUI)* *Cause* A file used by Replication Manager Application Agent does not exist. *Action* Make sure that the correct value is specified for the Application Agent setting, and complete the settings. If the error persists after re-execution, contact the Support Center. *(For CLI)* *Cause* This message is output when the dictionary map file was deleted for some reason or the storage directory for a dictionary map file does not exist. *Action* Check the `DRM_HOSTNAME` environment variable and the contents of the `init.conf` environment settings file. Also, create a storage directory for a dictionary map file, and then use the `drmdbsetup` utility to create a dictionary map file.
DRM-10109	Drive space is insufficient.	*(For GUI)* *Cause* Unused drive capacity was insufficient when the operation was executed.

Message ID	Message Text	Description
		Action Secure more drive capacity, and then retry the operation. *(For CLI)* *Cause* Unused drive capacity was insufficient when the command was executed. *Action* Increase available drive capacity, and then re-execute the command.
DRM-10110	You do not have access permission.	*(For GUI)* *Cause* A general user or a user without the proper permissions attempted to perform an operation. *Action* Check the permissions, and then retry the operation. *(For CLI)* *Cause* The user is not authorized to execute the command. *Action* Re-execute the command with system administrator permissions.
DRM-10111	The specified copy group is already locked.	*(For GUI)* *Cause* The copy group specified to be locked was already locked. *Action* No action is required. *(For CLI)* *Cause* The system tried to lock the specified copy group, but it was already locked. *Action* If this message is displayed during execution of the `drmmount` command, check the following: 1. Whether execution of the `drmmount` command has completed for the same backup ID. 2. Whether a completed `drmmount` command contains a copy group

Message ID	Message Text	Description
		that includes a backup ID specified in a drmmount command for which an error was output. Depending on the cause, take appropriate action from the following: 1. Execute the drmumount command for the backup ID from which this error occurred, and then re-execute the drmmount command. 2. From a drmmount command that completed execution, find the item containing the copy group that includes the backup ID specified in the drmmount command for which an error was output. Execute the drmumount command with the corresponding backup ID, and then re-execute the drmmount command.
DRM-10112	The specified copy group is not locked.	*(For GUI)* *Cause* An attempt was made to unlock a copy group that was not locked. *Action* No action is required. *(For CLI)* *Cause* The system tried to unlock the copy group, but it was not locked. *Action* No action is required.
DRM-10113	No usable copy group exists.	*(For GUI)* *Cause* No usable copy groups existed during backup, because all copy groups were locked. *Action* Unlock a copy group, and then execute the backup command again. *(For CLI)* *Cause* Since all the copy groups were locked at the time of executing backup, a usable copy group did not exist. *Action* Unlock a copy group and then re-execute the backup command.

Message ID	Message Text	Description
DRM-10114	A system error occurred during operation on a temporary file.	*(For GUI)* *Cause* A system error occurred during an operation on a temporary file executed by a command. *Action* Make sure that there is enough free memory and unused drive capacity. If there is enough, see the system log, and make sure there are no problems with the OS. If you cannot identify the cause of the error, contact the Support Center. *(For CLI)* *Cause* A system error occurred during operation on a temporary file. *Action* Check that memory and unused drive capacity are sufficient. If they are, check the system log and confirm that no problems exist in the OS. This message might be output if any of the following commands are executed during a backup command is running: `drmfscat`, `drmsqlcat`, `drmexgcat`, `drmoracat`, or `drmappcat`. In this case, wait for the backup command to end, and then re-execute the above command.
DRM-10115	The backup data is already locked.	*(For GUI)* *Cause* An attempt was made to create a replica for a locked copy group. *Action* Make sure that the replicas of target hosts are not mounted before creating a replica or acquiring replica information. If a replica is mounted, unmount it, and then create the replica or acquire the replica information. *(For CLI)* *Cause* The user attempted to execute a command on a locked copy group. *Action*

Message ID	Message Text	Description
		Unlock the target copy group before the command is executed.
DRM-10116	The dictionary map file is incorrect, but you lack permission to restore it.	*(For GUI)* *Cause* A file used by Replication Manager Application Agent is corrupted for some reason. An attempt to recover the file failed because the operation was performed with general user permissions, which do not contain the permissions necessary to perform the operation. *Action* Grant system administrator permissions to the user who manages Replication Manager Application Agent services, and then retry the operation. *(For CLI)* *Cause* The user tried to execute a command to restore a corrupted dictionary map file, but the user had general user permissions only. *Action* Obtain system administrator permissions, and then re-execute the command to update the dictionary map file.
DRM-10117	The backup ID for the backup to the tape could not be specified.	*Cause* This message is output when you attempt to lock a copy group by using the `drmcgctl` command for the backup ID to be displayed by the `drmtapecat` command. *Action* Specify the backup ID contained in any of the following commands as the backup ID to be specified in the `drmcgctl` command: • When the backup is of a file system: `drmfscat` command • When the backup is of an SQL Server database: `drmsqlcat` command • When the backup is of an Exchange database: `drmexgcat` command

Message ID	Message Text	Description
DRM-10118	The version of the dictionary map file is incorrect.	*(For GUI)* *Cause* The version of a file used by Replication Manager Application Agent was different when Replication Manager Application Agent was upgraded. *Action* Configure Application Agent. *(For CLI)* *Cause* During an upgrade of Replication Manager Application Agent, the data format conflicts with the upgrade version because a previous version of the dictionary map file exists in the default storage directory or the directory specified in the `init.conf` file. *Action* Use the `drmdbconvert` command to convert data in the dictionary map file. The default storage directory for the dictionary map file is as follows: *Replication-Manager-Application-Agent-installation-destination*`\DRM\db`
DRM-10119	The virtual server name in the configuration file (init.conf) is invalid.	*(For GUI)* *Cause* A virtual server name is invalid. *Action* Check the configuration, and change the virtual server name from the Edit Application Agent dialog box as necessary. If the problem cannot be resolved, contact the Support Center. *(For CLI)* *Cause* The virtual server name specified in the `DRM_DB_PATH` parameter in the configuration definition file (`init.conf`) does not match that defined in the `DRM_HOSTNAME` environment variable. *Action* Check the virtual server name specified in the `DRM_DB_PATH` parameter in the configuration definition file (`init.conf`) and the

Message ID	Message Text	Description
		virtual server name defined in the DRM_HOSTNAME environment variable.
DRM-10120	The virtual server name in the DRM_HOSTNAME environment variable or the configuration file (init.conf) is too long.	*(For GUI)* *Cause* A virtual server name is too long. *Action* Replication Manager Application Agent supports virtual server names no more than 63 characters. Reduce the length of the virtual server name to no more than 63 characters. *(For CLI)* *Cause* The virtual server name specified in the DRM_DB_PATH parameter in the configuration definition file (init.conf) or the virtual server name defined in the DRM_HOSTNAME environment variable is too long. *Action* Check the virtual server name specified in the DRM_DB_PATH parameter in the configuration definition file (init.conf) and the virtual server name defined in the DRM_HOSTNAME environment variable.
DRM-10121	The specified directory name of the dictionary map file is invalid.	*(For GUI)* *Cause* The directory name of a file used by Replication Manager Application Agent is invalid. *Action* Contact the Support Center. *(For CLI)* *Cause* Possible causes are as follows: • The directory name of the dictionary map file defined in the DRM_DB_PATH parameter in the configuration definition file (init.conf) is too long. • The directory name of the dictionary map file defined in the DRM_DB_PATH parameter in the configuration definition file (init.conf) is not an absolute path name. *Action*

Message ID	Message Text	Description
		Check the directory name of the dictionary map file specified in the `DRM_DB_PATH` parameter of the configuration file (`init.conf`).
DRM-10122	The specified copy group is a "remote copy" type, so it is not subject to processing.	*(For GUI)* *Cause* The specified copy group is a remote copy, and not subject to processing. *Action* Contact the Support Center. *(For CLI)* *Cause* This message is output when the `drmtapebackup` or `drmtaperestore` command is executed with a remote copy group specified. *Action* Check the copy type of the copy group that was backed up using the backup catalog specified by the `drmtapebackup` or `drmtaperestore` command. The `drmtapebackup` and `drmtaperestore` commands perform processing only for the volume replication function in the storage system. To perform a backup to a tape or a restoration from a tape, for the copy group using a remote copy, use the `EX_DRM_TAPE_BACKUP` or `EX_DRM_TAPE_RESTORE` command.
DRM-10123	Data conversion is unnecessary, because the dictionary map file is the latest version.	*(For GUI)* *Cause* Data does not need to be converted, because the dictionary map file is of the latest version. *Action* Contact the Support Center. *(For CLI)* *Cause* This message is output when the `drmdbconvert` command is executed for a dictionary map with the most recent data structure. *Action* You can perform a normal backup without using the `drmdbconvert` command to convert the data.

Message ID	Message Text	Description
DRM-10124	A contradiction was detected in the dictionary map file.	*(For GUI)* *Cause* An operation for the dictionary map file has failed, because the contents of the dictionary map file are invalid. *Action* Contact the Support Center. *(For CLI)* *Cause* This message is output when an attempt to operate the dictionary map file fails because an internal contradiction exists in the dictionary map file. *Action* See the actions taken for dictionary map file errors in the manual *Replication Manager Application Agent CLI User Guide*, and then execute the dictionary map file recovery procedure. If the error still occurs after recovering the dictionary map file, check the table name, processing, and error code output at the same time, collect all the required data, and then contact your support center.
DRM-10125	An unexpected error occurred in the processing of the dictionary map file.	*(For GUI)* *Cause* An unexpected error occurred during processing of a file used by Replication Manager Application Agent. *Action* Contact the Support Center. *(For CLI)* *Cause* This message is output when an attempt to operate the dictionary map file fails because an unexpected fatal error occurred. *Action* See the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect all the required data, and then contact your support center.
DRM-10126	A system error occurred during operation of the dictionary map file.	*(For GUI)* *Cause*

Message ID	Message Text	Description
		A system error occurred during processing of a file used by Replication Manager Application Agent. *Action* Resolve the cause of the system error based on the output OS error code, and then retry the operation. For details on the contents, causes, and countermeasures for the system error, see the appropriate OS documentation. If the problem cannot be resolved, contact the Support Center. *(For CLI)* *Cause* This message is output when an attempt to operate the dictionary map file fails because an OS system error occurred. *Action* Remove the cause of the system error based on the output OS error code, and then re-execute the command. For the contents of system errors, causes, and actions to be taken, see the appropriate OS manual.
DRM-10300	An optional copy group is not defined.	*(For GUI)* *Cause* A copy group has not been defined in a volume belonging to the selected storage group, or defined only with an unsupported copy type. *Action* Define the copy group, and then retry the operation. *(For CLI)* *Cause* This message is displayed when no copy group is defined for the volume specified for backup, or when only a copy group of an unsupported copy type is defined. *Action* A detailed message, output after this message, indicates the cause of the KAVX0006-E message. Check the detailed message, and then take appropriate action to remove the error.

Message ID	Message Text	Description
DRM-10301	The number of generations of the backup destination is different.	*(For GUI)* *Cause* The number of replica generations does not match. *Action* Check the detailed message subsequently output with the cause of the KAVX0006-E message, and act accordingly. *(For CLI)* *Cause* This message is output when the number of copy groups differs for each physical drive. *Action* A detailed message, output after this message, indicates the cause of the KAVX0006-E message. Check the detailed message, and then take appropriate action to remove the error.
DRM-10302	An attempt to acquire volume name has failed.	*(For GUI)* *Cause* An attempt to obtain a volume name has failed. *Action* If the KAVX0272-E message is not output, check the detailed message subsequently output with the cause of the KAVX0006-E message, and act accordingly. If the KAVX0272-E message is output, check whether a message indicating a problem is output to the backup server event logs, resolve the cause of failure, and execute the command again. *(For CLI)* *Cause* This message is output when an attempt to acquire a volume name fails. *Action* If the KAVX0272-E is not output, check the detailed message that is output after this message and indicates the cause of the KAVX0006-E message, and then take appropriate action. If the KAVX0272-E message is output, check whether a message indicating

Message ID	Message Text	Description
		abnormality was output to the event log of the backup server, and execute the command again after removing the error cause.
DRM-10303	An attempt at flush of the middle buffer of the file system has failed.	*(For GUI)* *Cause* An attempt to flush the file system relay buffer has failed. *Action* Check the detailed message subsequently output with the cause of the KAVX0006-E message, and act accordingly. *(For CLI)* *Cause* This message is output when an attempt to flush the intermediate buffer in the file system fails. *Action* A detailed message, output after this message, indicates the cause of the KAVX0006-E message. Check the detailed message, and then take appropriate action to remove the error.
DRM-10304	An attempt to open a file has failed.	*(For GUI)* *Cause* An attempt to open a file has failed. *Action* Check the detailed message subsequently output with the cause of the KAVX0006-E message, and act accordingly. *(For CLI)* *Cause* This message is output when an attempt to open a file fails. *Action* A detailed message, output after this message, indicates the cause of the KAVX0006-E message. Check the detailed message, and then take appropriate action to remove the error.
DRM-10305	The mount point is different.	*(For GUI)* *Cause* The mount point has changed. The information might not be up to date.

Message ID	Message Text	Description
		Action Update the host information. If the problem is still not resolved, contact the Support Center. *(For CLI)* *Cause* This message is output when one or more logical volumes to be restored where mount points differ exist both in backup catalog information and in the current configuration. If KAVX5129-E is displayed, the displayed result indicates the incorrect disk group. *Action* Perform the following procedure to make sure that there is no change to the volume configuration during backup processing: 1. Execute one of the following commands specifying the `-l` option, and then check the volume configuration at the time of the backup: - When the backup is of a file system: `drmfscat` command - When the backup is of an SQL Server database: `drmsqlcat` command - When the backup is of an Exchange database: `drmexgcat` command 2. Check the current volume configuration by using a method such as a RAID Manager command.
DRM-10306	The number of physical drive is different.	*(For GUI)* *Cause* The number of physical drives to be restored is different between the replica catalog information and the current configuration. The information might not be up to date. *Action* Update the host information. If the problem is still not resolved, contact the Support Center. *(For CLI)*

Message ID	Message Text	Description
		Cause This message is output when the number of physical drives to be restored in backup catalog information differs from that in the current configuration. If KAVX5129-E is displayed, the displayed result indicates the incorrect disk group. *Action* Perform the following procedure to make sure that there is no change to the volume configuration during backup processing: 1. Execute one of the following commands specifying the `-l` option, and then check the volume configuration at the time of the backup: - When the backup is of a file system: `drmfscat` command - When the backup is of an SQL Server database: `drmsqlcat` command - When the backup is of an Exchange database: `drmexgcat` command 2. Check the current volume configuration by using a method such as a RAID Manager command.
DRM-10307	The number of volumes is different.	*(For GUI)* *Cause* The volume count has changed. The information might not be up to date. *Action* Update the host information. If the problem is still not resolved, contact the Support Center. *(For CLI)* *Cause* This message is output when the number of volumes to be restored in backup catalog information differs from that in the current configuration. If KAVX5129-E is displayed, the displayed result indicates the incorrect disk group.

Message ID	Message Text	Description
		Action Make sure that there is no change to the volume configuration during backup processing with the following procedure: 1. Execute one of the following commands specifying the `-l` option, and then check the volume configuration at the time of the backup: - When the backup is of a file system: `drmfscat` command - When the backup is of an SQL Server database: `drmsqlcat` command - When the backup is of an Exchange database: `drmexgcat` command 2. Check the current volume configuration by using a method such as a RAID Manager command.
DRM-10308	An error occurred in an operation related to extended maintenance mode.	*(For GUI)* *Cause* An error occurred during an operation related to the extended maintenance mode. *Action* Check the following: • The patch for using the MSCS extended maintenance mode is installed. • The target disk resource is in the online status. • The host node owns the target disk resource. If no problems exist, check the table name, processing, and error code output at the same time, collect the appropriate materials, and then contact the Support Center. *(For CLI)* *Cause* Possible causes are as follows: • The status of the maintenance mode for the disk resource could not be obtained.

Message ID	Message Text	Description
		• The operated disk resource could not be changed to maintenance mode. *Action* Make sure of the following: • The patch for using the MSCS extended maintenance mode is installed. • The target disk resource is online. • The host node owns the target disk resource. If no problems exist, check the table name, processing, and error code output at the same time, collect all the required data, and then contact your support center.
DRM-10309	The target disk resource is not online.	*(For GUI)* *Cause* The target disk resource is not online. *Action* Make sure that the disk resource to be used is online. If the disk resource is not online, place the disk resource online, and then retry the operation. If this error occurs even when the target resource is not online, check the table name, processing, and error code output at the same time, collect the appropriate materials, and then contact the Support Center. *(For CLI)* *Cause* The status of the operated disk resource cannot be changed because the disk resource is not online. *Action* Check whether the operated disk resource is online. If the disk resource is not online, bring it online, and then re-execute the command. If this error occurs even when the target disk resource is online, check the table name, processing, and error code output at the same time, collect all the required data, and then contact your support center.

Message ID	Message Text	Description
DRM-10310	A timeout occurred while waiting for the disk resource status to change.	*(For GUI)* *Cause* A timeout occurred waiting for the status of the target disk resource to change. *Action* Contact the Support Center. *(For CLI)* *Cause* The status of the maintenance mode for the disk resource did not change to the specified status, within the waiting period. *Action* In the environment settings file for Replication Manager Application Agent (`init.conf`), increase the values of `CLU_RETRY_TIME` and `CLU_RETRY_WAIT`, and then re-execute the command.
DRM-10311	This version of Windows does not support partial restoration of cluster resources that are in an online state.	*(For GUI)* *Cause* The version of the server OS is not supported. *Action* Windows Server 2003 or Windows Server 2008 is needed to perform partial restoration of an online cluster resource. *(For CLI)* *Cause* The server's OS is not Windows Server 2003 or Windows Server 2008. To perform partial restoration of cluster resources in an online state, Windows Server 2003 or Windows Server 2008 is needed. *Action* In the configuration definition file of Replication Manager Application Agent (`init.conf`), specify `CLU_MSCS_RESTORE=OFFLINE`, and then try again.
DRM-10312	An attempt to acquire OS version information has failed.	*(For GUI)* *Cause* OS version information could not be obtained. *Action*

Message ID	Message Text	Description
		Wait a while, update the host information, and then retry the operation. If the problem persists, contact the Support Center. *(For CLI)* *Cause* An attempt to acquire OS version information has failed. *Action* Based on the error code output to the trace log of the product, remove the problem preventing the version information from being obtained, and then re-execute the command.
DRM-10313	An attempt to re-set signature and volume layout information on the physical drive has failed.	*(For GUI)* *Cause* An attempt to reset signature and volume layout information on the physical drive has failed. *Action* Make sure that the physical drive is supported by Replication Manager Application Agent. If the drive is not supported by Replication Manager Application Agent, check the system logs, make sure that no messages indicating a problem on the physical drive are output, and resolve the cause of failure. *(For CLI)* *Cause* An error occurred during processing to re-set the signature and volume layout information on the physical drive. *Action* Refer to the *Release Notes* and check whether the target volume is a drive supported by Replication Manager Application Agent. If the target volume is supported, examine the system log and check whether error messages have been output for the target volume, and then remove the cause of the error.
DRM-10314	An attempt to acquire signature and volume layout information from the physical drive has failed.	*(For GUI)* *Cause* An attempt to obtain signature and volume layout information from the physical drive has failed.

Message ID	Message Text	Description
		Action Make sure that the physical drive is supported by Replication Manager Application Agent. If the drive is not supported by Replication Manager Application Agent, check the system logs, make sure that no messages indicating a problem on the target volume are output, and resolve the cause of failure. *(For CLI)* *Cause* An error occurred during the attempt to acquire the signature and volume layout information from the physical drive. *Action* Refer to the *Release Notes* and check whether the target volume is a drive supported by Replication Manager Application Agent. If the target volume is supported, examine the system log and check whether error messages have been output for the target volume, and then remove the cause of the error.
DRM-10315	The status of the secondary volume is invalid.	*(For GUI)* *Cause* The status of the secondary volume was checked, and found to have one of the following anomalies: 1. If the KAVX5146-E message was output at the same time: The target secondary volume is mounted on the backup server. 2. If the KAVX5147-E message was output at the same time: The secondary volume is not hidden. 3. If the KAVX5151-E message was output at the same time: The pair status is invalid. The secondary volume of the output pair is the primary volume of another pair. *Action* The target method differs depending on the message displayed at the same time.

Message ID	Message Text	Description
		1. If the KAVX5146-E message is displayed at the same time: Unmount the corresponding volume from the backup server, and then retry the operation. 2. If the KAVX5147-E message is displayed at the same time: If the corresponding volume is mounted on the backup server, unmount it. After that, use the replica option in the Application Agent settings to hide the volume. This will hide the backup server volume. Once this is done, try again. 3. If the KAVX5151-E message is displayed at the same time: Use the displayed MU number to identify the secondary volume pair, and split the pair. *(For CLI)* *Cause* Either of the following abnormalities was detected as a result of checking the secondary volume status: • If KAVX5146-E was output at the same time The target secondary volume is mounted on the backup server. • If KAVX5147-E was output at the same time The secondary volume is not hidden. • If KAVX5151-E was output at the same time The pair status is incorrect. The secondary volume of the output copy group and the primary volume of another copy group have been set. *Action* Take the following actions based on the message output at the same time. • If the KAVX5146-E was output at the same time Unmount the output mount point on the backup server, and then re-execute the command. To

Message ID	Message Text	Description
		unmount the volume mounted by using the `drmmount` command, use the `drmumount` command. • If the KAVX5147-E was output at the same time If the output volume is mounted on the backup server, unmount it. Then, describe the `HORCMINST` and `DEVICE_DETACH=ENABLE` in the RAID Manager linkage definition file, and then execute the `drmdevctl -detach` command. By this operation, volumes on the backup server are hidden. After this, re-execute the command. • If the KAVX5151-E was output at the same time Determine the copy group of the secondary volume from the output MU number, and then perform the pair-split processing.
DRM-10316	An attempt to acquire the physical drive information from the logical volume has failed.	*(For GUI)* *Cause* An attempt to use the OS API to obtain information about the physical drive on which the logical volume is located has failed. *Action* Check the system logs to confirm whether a message indicating a problem related to the target physical drive was output, and resolve the cause of failure. *(For CLI)* *Cause* An attempt to acquire the physical drive information from the logical volume using the API provided by the OS has failed. *Action* See the system log to check whether a message indicating abnormality in the target physical drive is output, and then remove the error cause.
DRM-10317	An error occurred in the Protection Manager service.	*(For GUI)* *Cause* An error occurred for the Replication Manager Application Agent service during processing on the backup server.

Message ID	Message Text	Description
		Action Resolve the issue according to the countermeasures in the error message output at the same time, and then retry the operation. *(For CLI)* *Cause* An error occurred in the Protection Manager Service during the processing on the backup server. *Action* Fix the error based on the error message (KAVX5024-E) that was output at the same time, and then execute the command again.
DRM-10318	An attempt to connect to the Protection Manager service has failed.	*(For GUI)* *Cause* An error occurred during communication processing for the Replication Manager Application Agent service. *Action* Resolve the issue according to the countermeasures in the error message output at the same time, and then retry the operation. *(For CLI)* *Cause* An error occurred during communication processing with the Protection Manager Service. *Action* Fix the error based on the error message (KAVX0258-E or KAVX0269-E) that was output at the same time, and then execute the command again.
DRM-10319	An attempt to set an environment variable has failed.	*(For GUI)* *Cause* An attempt to set environment variables in Replication Manager Application Agent has failed. *Action* Make sure that sufficient memory and drive capacity exist. If they do exist, check the system logs to see whether any problems exist with the OS. If no problems exist, contact the Support Center. *(For CLI)*

Message ID	Message Text	Description
		Cause An error occurred in the settings processing for the environment variable. *Action* Make sure the memory and unused drive capacity are sufficient. If there is enough memory and unused drive capacity, see the system log, and check whether the OS has an abnormality. If no abnormality is found, contact your support center.
DRM-10320	The mount command of the backup server ended with an error.	*(For GUI)* *Cause* A backup server mount operation terminated with an error. *Action* Make sure that the mount path name is specified correctly. If the correct path name is specified, check the system logs on the backup server to see whether a problem exists. If no problems exist, contact the Support Center. *(For CLI)* *Cause* The `mount` command on the backup server terminated due to an error. *Action* Check whether the path name of the mount has been specified correctly. If the path name is correct, see the trace log file for the product or the system log file on the backup server, and check whether a problem exists. If no abnormality is found, contact your support center.
DRM-10321	The command was not executed because the backup ID of the backup server was locked.	*(For GUI)* *Cause* An attempt to automatically import replica history has failed, because the backup server replica was already locked. *Action* Check the following and act accordingly: • If another operation is being executed on the backup server, wait a while, and then retry the operation.

Message ID	Message Text	Description
		• If the backup server replica is locked, unlock it, and then retry the operation. *(For CLI)* *Cause* Automatic import of the backup catalog failed because the backup ID of the backup server has already been locked. *Action* Check the following, and then take appropriate action based on the check result: • Make sure another command is not running on the backup server. If another command is running, wait for that command to end, and then execute the command again. • Make sure the backup ID of the backup server is not locked. If the backup ID of the backup server is locked, unlock it, and then execute the command again.
DRM-10322	The drive to be backed up is not related to any copy groups defined in the definition file for the cascade configuration.	*Cause* When the backup of the cascade configuration was executed, the drive to be backed up does not use the same volume as the copy group of the remote copy defined in the definition file for the cascade configuration. *Action* Make sure that the cascade configuration is correct, remove the cause of the error, and then re-execute the command.
DRM-10323	An attempt to perform backup pre-processing at the remote site has failed.	*Cause* An error occurred while preprocessing at a remote site, during backup of the cascade configuration. *Action* Check the message that was output before the KAVX5402-E message, remove the cause of the error at the remote site, and then re-execute the command.
DRM-10324	An attempt to resynchronize a copy group at the remote site has failed.	*Cause* An error occurred in the resynchronization of the copy group at

Message ID	Message Text	Description
		a remote site, during backup of the cascade configuration. *Action* Check the message that was output before the KAVX5402-E message, remove the cause of the error in the remote site, and then re-execute the command.
DRM-10325	An attempt to perform backup post-processing at the remote site has failed.	*Cause* An error occurred while postprocessing at a remote site, during backup of the cascade configuration. *Action* Check the message that was output before the KAVX5402-E message, remove the cause of the error in the remote site, and then re-execute the command.
DRM-10326	Processing at the remote site was forcibly terminated.	*Cause* A time-out occurred in processing at a remote site, during backup of the cascade configuration. This forcibly terminated the process. *Action* Change the time-out time specified in the definition file for the cascade configuration to a longer time than the expected necessary time, and then re-execute the command. For details on the definition file for the cascade configuration, see the *Replication Manager Application Agent CLI User Guide*.
DRM-10327	Processing at the remote site could not be forcibly terminated.	*Cause* A time-out occurred in processing at a remote site, during backup of the cascade configuration. The system attempted to forcibly terminate the process, but the attempt failed. *Action* Remove the cause of the failure. After that, change the time-out time specified in the definition file for the cascade configuration to a longer time than the expected necessary time, and then re-execute the command. For details on the definition file for the cascade configuration, see the *Replication Manager Application Agent CLI User Guide*.

Message ID	Message Text	Description
DRM-10328	An attempt to acquire physical drive information from a copy group has failed.	*(For GUI)* *Cause* An error occurred for processing to obtain the physical drive name from a copy group. *Action* Check the CCI settings. If the settings are correct, check the CCI log information, and make sure that no issues exist. *(For CLI)* *Cause* An error occurred during processing to acquire the name of a physical drive from a copy group. *Action* If the settings are correct, refer to the RAID Manager log to check whether any problems exist.
DRM-10329	A physical drive could not be placed offline.	*(For GUI)* *Cause* An error occurred during processing to place the physical drive offline. *Action* Check the system logs to see whether messages indicating a problem related to the target physical drive have been output, and resolve the cause of failure. *(For CLI)* *Cause* An attempt to place a physical drive offline has failed. *Action* Refer to the system log to check whether a message indicating abnormality in the target physical drive has been output, and then remove any causes of abnormality.
DRM-10330	A physical drive could not be placed online.	*(For GUI)* *Cause* An error occurred during processing to place the physical drive online. *Action* Check the system logs to see whether messages indicating a problem related to the target physical drive have been

Message ID	Message Text	Description
		output, and resolve the cause of failure. *(For CLI)* *Cause* An attempt to place a physical drive online has failed. *Action* Refer to the system log to check whether a message indicating abnormality in the target physical drive has been output, and then remove any causes of abnormality.
DRM-10337	The current physical drive partition style differs from the one that was backed up.	*(For GUI)* *Cause* The partition style of the drive to be restored is different from that during backup. *Action* Unite the drive partition style with that used during backup, and then perform a restoration again. *(For CLI)* *Cause* The drive partition style of the restoration destination is different from the drive partition style that was used when the backup was performed. *Action* Make sure that the drive partition style is the same as the drive partition style that was used when the backup was performed, and then re-execute the restore command.
DRM-10339	The user has not been authorized by RAID Manager.	*Cause* Possible causes are as follows: 1. The user who executed the command is not logged in to RAID Manager. 2. A version of RAID Manager whose user authentication function is not supported by Replication Manager Application Agent is being used. *Action* According to the cause, take one of the following actions: 1. Log in to RAID Manager, and then execute the command.

Message ID	Message Text	Description
		2. Upgrade RAID Manager to a version whose user authentication function is supported by Replication Manager Application Agent. For details about the RAID Manager versions supported by Replication Manager Application Agent, see *Replication Manager Application Agent CLI User Guide*. For details about how to check and upgrade the RAID Manager version, see the RAID Manager documentation.
DRM-10340	The user authentication function of RAID Manager did not execute correctly.	*Cause* The user authentication function of RAID Manager was not executed correctly. *Action* See the RAID Manager manuals to review the RAID Manager settings. If the settings are correct, check the RAID Manager log information to make sure that there is no problem.
DRM-10405	The file name is too long.	*(For GUI)* *Cause* The path name specified as a backup target exceeds 1,024 half-width characters. *Action* Path names of 1,025 characters or more cannot be specified. Specify a correct file name with 1,024 characters or fewer. *(For CLI)* *Cause* The file path name specified with the `-target` option or `-f` option for backup exceeds 1,024 bytes. *Action* A file path name exceeding 1,024 bytes cannot be specified. Specify a correct file name by using less than 1,024 bytes.
DRM-10406	The process has reached the maximum number of files that can be opened.	*(For GUI)* *Cause* The maximum number of files that can be opened by one process has been reached. *Action*

Message ID	Message Text	Description
		Redefine the kernel parameter, and increase the number of files that can be opened by a process. *(For CLI)* *Cause* The process has reached the maximum number of files that can be opened. *Action* Redefine the kernel parameter and increase the number of files that a process can open.
DRM-10407	The number of open files in the entire system has reached the maximum allowed limit.	*(For GUI)* *Cause* The maximum number of files that can be opened on a system has been reached. *Action* Redefine the kernel parameter, and increase the number of files that can be opened by the system. *(For CLI)* *Cause* The number of open files in the entire system has reached the maximum allowed limit. *Action* Redefine the kernel parameter to increase the number of files that the system can open.
DRM-10408	An attempt to access a file failed.	*(For GUI)* *Cause* An invalid file or directory name was specified when backup or restoration processing was performed, preventing access to the target path name. *Action* Make sure that the path name for the backup or restoration target is specified correctly. If a correct path name is specified, check the Replication Manager Application Agent trace log file and system logs for any anomalies. If the problem persists, contact the Support Center. *(For CLI)* *Cause*

Message ID	Message Text	Description
		The system cannot access the file path because an invalid file name or invalid directory name was specified for backup or restore processing. *Action* Check whether the path name used in backup or restore processing is specified correctly. If the path name is correct, examine the Replication Manager Application Agent trace log file and the system log, and check whether there is any problem.
DRM-10409	An attempt to generate a process failed.	*(For GUI)* *Cause* An attempt to spawn an internal process failed when the Replication Manager Application Agent function was executed. *Action* Make sure that sufficient memory and drive capacity exist. If they do exist, check the system logs to see whether any problems exist with the OS. If the problem persists, contact the Support Center. *(For CLI)* *Cause* When a command was executed, an attempt to generate an internal process failed. *Action* Make sure there is sufficient memory and unused drive capacity. If there are no problems with memory or unused drive capacity, examine the system log and check whether there are any problems in the OS.
DRM-10410	The host name could not be obtained.	*Cause* During execution of a command to back up to tape, the host name that executes the command could not be obtained. *Action* Set up the system so that the name of the host that executes the command can be obtained correctly. Then, re-execute the command.
DRM-10411	The expiration period could not be set.	*Cause*

Message ID	Message Text	Description
		When executing the `drmtapebackup` command, the system could not set the expiration period, based on the number of days that the backup data is to be stored (previously specified in the `drmtapeinit` command). *Action* Re-execute the `drmtapeinit` command and reset the number of days that the backup data is to be stored, and then re-execute the `drmtapebackup` command.
DRM-10418	An indispensable item *item-name* is not specified.	*(For GUI)* *Cause* A required item is missing from the agent user script. *Action* Specify the required items in the agent user script file. *(For CLI)* *Cause* This message is output when a required item is not specified in a user script. *Action* Specify all required items in the user script file.
DRM-10419	Line *line-number*: The required item "*item-name*" is not specified in the command definition section.	*(For GUI)* *Cause* A required item is missing from the command definition section in the agent user script. *Action* Specify the required items in the agent user script file. *(For CLI)* *Cause* This message is output when a required item is not specified in the command definition section of a user script. *Action* Specify all required items in the user script file.
DRM-10420	Line *line-number*: The value of item "*item-name*" is not specified.	*(For GUI)* *Cause*

Message ID	Message Text	Description
		An item in the agent user script has no value specified. *Action* Set the value on the corresponding line in the agent user script file. *(For CLI)* *Cause* This message is output when no value is specified for an item in the user script. *Action* Set the value on the corresponding line of the user script file.
DRM-10421	Line *line-number*: The specified value cannot be used for item "*item-name*".	*(For GUI)* *Cause* A prohibited keyword is used as an item value in the agent user script. *Action* See the manual for values that can be used, and fix the value on the corresponding line in the agent user script file. *(For CLI)* *Cause* This message is output when an illegal keyword is used for the value of an item in the user script. *Action* See the manual *Replication Manager Application Agent CLI User Guide*, check the values that can be used for the item, and then correct the corresponding line of the user script file.
DRM-10422	Line *line-number*: The specified value's length exceeded the limit for item "*item-name*" The max. is *maximum-number-of-characters* characters.	*(For GUI)* *Cause* The value of an item in the agent user script file is too long. *Action* Edit the agent user script file so that the number of characters in the value on the corresponding line is less than or equal to the maximum. *(For CLI)* *Cause* This message is output when the value of an item in the user script file is too long.

Message ID	Message Text	Description
		Action Edit the contents of the user script file: correct the corresponding line so that the number of characters in the value is less than or equal to the maximum.
DRM-10423	Line *line-number*: The specified value is not an integer, or is outside the range from *minimum-value* to *maximum-value*.	*(For GUI)* *Cause* The value of an item in the agent user script file is out of range. *Action* Edit the contents of the agent user script file so that the value on the corresponding line is an integer within the displayed range. *(For CLI)* *Cause* This message is output when the value of an item in the user script file is outside the valid range. *Action* Edit the contents of the user script file: correct the corresponding line so that the value is an integer within the displayed range.
DRM-10424	Line *line-number*: Item "*item-name*" cannot be specified more than once in the same file.	*(For GUI)* *Cause* An item that must be unique appears multiple times in the agent user script file. *Action* Edit the agent user script file so that the item on the corresponding line does not occur more than once. *(For CLI)* *Cause* This message is output when an item that cannot be duplicated is specified more than once in the user script file. *Action* Edit the contents of the user script file: correct the corresponding line so that the item is not duplicated.
DRM-10425	Line *line-number*: Item "*item-name*" cannot be specified more than once in the same command definition section.	*(For GUI)* *Cause* An item that must be unique appears multiple times in the agent user script. *Action*

Message ID	Message Text	Description
		Edit the agent user script so that the item on the corresponding line does not occur more than once. *(For CLI)* *Cause* This message is output when an item that cannot be duplicated is specified more than once in the same command definition section of the user script file. *Action* Edit the contents of the command definition section of the user script file: correct the corresponding line so that the item is not duplicated.
DRM-10426	Line *line-number*: The item name or section name is invalid.	*(For GUI)* *Cause* The name of an item or section specified in the agent user script is invalid. *Action* See the manual for item names that can be specified, and fix the corresponding line in the agent user script. *(For CLI)* *Cause* This message is output when either the specified item name or section name in the user script file is invalid. *Action* See the manual *Replication Manager Application Agent CLI User Guide*, check the values that can be set for the item name, and then correct the corresponding line of the user script file.
DRM-10427	Line *line-number*: Item "*item-name*" cannot be specified outside the user processing section.	*(For GUI)* *Cause* An item that is not allowed to be specified before the user processing section in the agent user script is specified before the user processing section. *Action* Fix the contents of the agent user script so that corresponding line falls within the user processing section. *(For CLI)* *Cause*

Message ID	Message Text	Description
		This message is output when an item that cannot be specified before the user processing section of the user script file is specified in that section. *Action* Move the corresponding line of the user script file to within the user processing section of the user script file.
DRM-10428	Line *line-number*: Item "*item-name*" cannot be specified outside the command definition section.	*(For GUI)* *Cause* An item that is not allowed to be specified outside the command definition section in the agent user script is specified outside the command definition section. *Action* Fix the contents of the agent user script so that corresponding line falls within the command definition section. *(For CLI)* *Cause* This message is output when an item that cannot be specified outside of the command definition section of a user script file is specified in that section. *Action* Move the corresponding line of the user script file to within the command definition section of the user script file.
DRM-10429	Line *line-number*: Item "*item-name*" cannot be specified inside the user processing section.	*(For GUI)* *Cause* An item that is not allowed to be specified within the user processing section in the agent user script is specified before the user processing section. *Action* Fix the contents of the agent user script so that corresponding line falls outside the user processing section. *(For CLI)* *Cause* This message is output when an item that cannot be specified outside of the command definition section of a user script file is specified in that section. *Action*

Message ID	Message Text	Description
		Move the corresponding line of the user script file to within the command definition section of the user script file.
DRM-10430	Line *line-number*: The size of the specified line exceeded the limit. The max. is *maximum-number-of-bytes* bytes.	*(For GUI)* *Cause* The number of bytes in a line in the agent user script exceeds the maximum. *Action* Fix the contents of the agent user script so that the number of bytes in the corresponding line is less than or equal to the maximum. *(For CLI)* *Cause* This message is output when a line whose length exceeds the maximum exists in the user script file. *Action* Correct the corresponding line in the user script file so that the number of characters is within the maximum length.
DRM-10431	The user script is too large.	*(For GUI)* *Cause* Processing cannot be performed because the agent user script is too large. *Action* Reduce the contents in the agent user script. *(For CLI)* *Cause* This message is output when the user script is too large for processing. *Action* Delete some of the contents of the user script file.
DRM-10432	Line *line-number*, column *column-number*: Contains an invalid character.	*(For GUI)* *Cause* The agent user script contains an invalid character code (a character less than 0x20, other than a carriage return or tab). *Action*

Message ID	Message Text	Description
		Fix the contents of the agent user script so that the invalid character is removed. *(For CLI)* *Cause* This message is output when the user script file contains an invalid character code (anything less than 0x20, a line break, or a tab character). *Action* Edit the user script file contents: delete any invalid characters.
DRM-10433	An internal error occurred in the user script processing.	*(For GUI)* *Cause* An internal error occurred for agent user script processing. *Action* Contact the Support Center. *(For CLI)* *Cause* This message is output when an internal error occurs in the user script processing. *Action* Contact your support center.
DRM-10434	An error occurred in VSS.	*(For GUI)* *Cause* An error occurred for VSS. *Action* Make sure that the startup type for Volume Shadow Copy service is not disabled. If the startup type for VSS is disabled, revert the startup type to manual, and then retry the operation. If the startup type is manual, collect the appropriate materials, and then contact the Support Center. *(For CLI)* *Cause* This message is output when an error occurs in VSS. *Action* Check whether the startup type of the Volume Shadow Copy service is invalid.

Message ID	Message Text	Description
		If it is invalid, return it to manual and then re-execute the command. If this message is displayed after returning the startup type to manual, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect all the required data, and then contact your support center. In addition, if either of the following conditions is not satisfied in a cluster configuration for the dependency relation between the restore target cluster disk resource and the Microsoft Exchange Information Store resource, this message is output: • For Exchange Server 2003: Except the dependency relation between the restore target cluster disk resource and the Microsoft Exchange System Attendant resource, do not set a dependency relation in which the Microsoft Exchange Information Store resource goes offline when the restore target cluster disk resource goes offline. • For Exchange Server 2007: Do not set a dependency relation in which the Microsoft Exchange Information Store resource goes offline when the restore target cluster disk resource goes offline.
DRM-10435	An error occurred in Virtual Disk Service.	*Cause* An error occurred in Virtual Disk Service. *Action* Make sure that the startup type for the Virtual Disk Service service is not disabled. If the startup type for the Virtual Disk Service service is disabled, revert the startup type to manual, and try again. If the error occurs again, relaunch the Virtual Disk Service service, and then re-execute the command. After re-executing the command, if the error occurs once again, collect the appropriate materials by referring to the troubleshooting explanation in the *Hitachi Command Suite Replication Manager Application Agent CLI User Guide*, and then contact customer support.

Message ID	Message Text	Description
DRM-10436	Line *line-number*: The value's format is invalid.	*(For GUI)* *Cause* The format of a value is invalid. This might be due to the following: The specified format of the ENV setting is invalid (it contains no half-width equals sign, or no environment variable name is specified). *Action* Fix the value of the corresponding line so that its format is valid. *(For CLI)* *Cause* This message is output when the value's format is invalid. Possible causes are as follows: • The value's format of the ENV setting item is invalid (no equal sign exists, or the environment variable name is not specified). *Action* Correct the corresponding line to the correct format.
DRM-10450	An attempt to transfer files to the FTP client has failed.	*Cause* An attempt to transfer files to the FTP client has failed. *Action* Check the following items. • Ensure the FTP service in the FTP server is running normally. • Determine if connection to the FTP server can be made properly with the specified user ID and password. • When connection to the FTP server can be made, determine if a temporary directory for extended command on the FTP server and a backup catalog file subject to transfer exist.
DRM-10451	An attempt to transfer files to the FTP server has failed.	*Cause* An attempt to transfer files to the FTP server has failed. *Action* Check the following items. • Ensure the FTP service in the FTP server is running normally.

Message ID	Message Text	Description
		• Determine if connection to the FTP server can be made properly with the specified user ID and password. • When connection to the FTP server can be made, determine if a temporary directory for extended command on the FTP server exists and if a file can be created.
DRM-10452	The character string specified as the operation ID exceeds the maximum number of characters.	*Cause* The operation ID, which was specified when the command was executed, exceeds the maximum number of characters allowed. *Action* Specify an operation ID within the limit.
DRM-10453	The specified file does not exist.	*Cause* The file required by the executed extended command does not exist. *Action* Check that the specified file exists.
DRM-10454	An attempt to access the specified file failed.	*Cause* An attempt to access the required file failed during the processing of the extended command. *Action* Check that the user has the proper permission for the target file and that there is sufficient memory and unused drive capacity. If there is sufficient memory and unused drive capacity, examine the system log and check if there is any problem with the operating system.
DRM-10455	An attempt to read the specified file failed.	*Cause* An attempt to read the required file failed during the processing of the extended command. *Action* Use a text editor to check that the specified definition file can be opened.
DRM-10456	An attempt to copy the specified file failed.	*Cause* An error occurred when the file is copied. *Action*

Message ID	Message Text	Description
		Check whether the file system capacity is full. If the file system capacity is not full, examine the system log and check whether there is any error message about the target file system. If the file system is normal, contact your support center.
DRM-10457	The content of the specified file is invalid.	*Cause* The contents of the specified file are incorrect. *Action* Check that the contents of the file are correct.
DRM-10458	An attempt to generate a process failed.	*Cause* Generation of an internal process failed during command execution. *Action* Check that there is sufficient memory and unused drive capacity. If there is sufficient memory and unused drive capacity, examine the system log and check if there is any problem with the operating system.
DRM-10459	An attempt to obtain the installation path failed.	*Cause* Since Replication Manager Application Agent is not installed correctly in the Windows system, the installation path of the program could not be obtained. *Action* Uninstall the program and then re-install it.
DRM-10460	An attempt to connect to the FTP server failed.	*Cause* Connection to the FTP server was not possible. *Action* On the FTP server, check that the FTP service is running normally. Also make sure that you can use the specified ID and password to connect to the specified FTP server.
DRM-10461	An attempt to connect to database server failed.	*Cause* Connection to the database server was impossible. *Action* On the database server, make sure that the service is running normally. Also make sure that you can connect to the database server by using the

Message ID	Message Text	Description
		name of the user who is logged in and the password.
DRM-10462	An internal error occurred.	*Cause* An unknown internal error occurred. *Action* Refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect the necessary data, and then contact your support center.
DRM-10463	The target backup catalog file does not exist.	*Cause* This message is output when the backup catalog file to be operated by executing the extended command cannot be found. *Action* Create or copy a backup catalog file to execute the extended command.
DRM-10464	An error occurred during database server processing.	*Cause* This message is output if an error occurs during the database server processing. *Action* Make sure that the service is running on the database server. Also make sure that you can connect to the database server by using the name of the user who is logged in and the password.
DRM-10465	The assigned directory does not exist in the specified file.	*Cause* This message is output when the specified directory does not exist on the host. *Action* Confirm that the specified directory exists.
DRM-10466	The assigned directory name is not an absolute path.	*Cause* This message is output when the specified directory is not an absolute path. *Action* Use an absolute path to specify the directory name.
DRM-10467	The target file does not exist.	*Cause* The file subject to the extended command operation could not be found.

Message ID	Message Text	Description
		Action Use the following extended commands and create a file to operate. • EX_DRM_BACKUPID_SET • EX_DRM_SQL_BACKUP (When the backup is of an SQL Server database.) • EX_DRM_TAPE_RESTORE • EX_DRM_DB_IMPORT
DRM-10469	An attempt to write an internal file failed.	*Cause* The file could not be written to during processing of the extension command. *Action* Check the file name that was output with this message, and make sure that the file is in a writable state and that no other program is accessing that file.
DRM-10470	The target SQL Server metafile does not exist.	*Cause* The target SQL Server metafile executed by the extended command cannot be found. *Action* Create or copy the SQL Server metafile and then re-execute the extended command.
DRM-10471	The required initialization command has not been executed.	*Cause* Either the necessary parameter registration command (drmsqlinit) was not executed before the extended command was executed, or the information created when the parameter registration command was executed is damaged. *Action* Execute the parameter registration command that is displayed in this message and then re-execute the extended command.
DRM-11010	An internal error occurred.	*(For GUI)* *Cause* An internal error occurred. *Action* Collect the SQL Server error log and the Windows event log, and check the status of the OS and SQL Server. If no abnormality is found in the OS or SQL Server, contact the Support Center.

Message ID	Message Text	Description
		(For CLI) *Cause* An unexpected internal error occurred during command execution. *Action* Check the error code and the details indicated in the message, refer to the SQL Server documentation, and then remove the cause of the error. Collect the SQL Server error log and the Windows event log as required, and then check the status of the OS or the SQL Server. If you cannot detect any problems, contact your support center.
DRM-11011	The error was detected during execution of an SQL statement.	*(For GUI)* *Cause* An error was returned from SQL Server while an SQL statement was being executed. *Action* Collect the SQL Server error log and the Windows event log, and check the status of the OS and SQL Server. If no abnormality is found in the OS or SQL Server, contact the Support Center. *(For CLI)* *Cause* A message was returned from SQL Server during execution of an SQL statement. *Action* Check the error code and the details indicated in the message, refer to the SQL Server documentation, and then remove the cause of the error. Collect the SQL Server error log and the Windows event log as required, and then check the status of the OS or the SQL Server. If you cannot detect any problems, contact your support center.
DRM-11012	An error was detected during the processing to log on to SQL Server.	*(For GUI)* *Cause* An unexpected error occurred while processing a logon to SQL Server. *Action* Collect the SQL Server error log and the Windows event log, and check the status of the OS and SQL Server.

Message ID	Message Text	Description
		If no abnormality is found in the OS or SQL Server, contact the Support Center. *(For CLI)* *Cause* An unexpected internal error occurred during command execution. *Action* Collect the SQL Server error log and the Windows event log as required, and then check the status of the OS or the SQL Server. If you cannot detect any problems, contact your support center.
DRM-11013	Logging on to SQL Server...	*Cause* The above message was returned while logging on to SQL Server. *Action* Check the error code and the details indicated in the message, refer to the SQL Server documentation, and then remove the cause of the error. Collect the SQL Server error log and the Windows event log as required, and then check the status of the OS or the SQL Server. If you cannot detect any problems, contact your support center.
DRM-11014	An error was detected during the processing to log off from the SQL Server.	*(For GUI)* *Cause* An unexpected error occurred while processing a logoff from SQL Server. *Action* Collect the SQL Server error log and the Windows event log, and check the status of the OS and SQL Server. If no abnormality is found in the OS or SQL Server, contact the Support Center. *(For CLI)* *Cause* An unexpected error occurred during the logoff process from SQL Server. *Action* Collect the SQL Server error log and the Windows event log as required, and then check the status of the OS or the SQL Server. If you cannot detect any problems, contact your support center.

Message ID	Message Text	Description
DRM-11015	Logging off from SQL Server...	*Cause* The above message was returned while logging off from SQL Server. *Action* Check the error code and the details indicated in the message, refer to the SQL Server documentation, and then remove the cause of the error. Collect the SQL Server error log and the Windows event log as required, and then check the status of the OS or the SQL Server. If you cannot detect any problems, contact your support center.
DRM-11016	An attempt to open a metafile failed.	*(For GUI)* *Cause* An attempt to open a VDI metafile failed. *Action* Make sure that you have access permissions for the VDI metafile. *(For CLI)* *Cause* An attempt to open a metafile failed while backup or restore processing was being performed for the SQL Server database. *Action* Check whether you have permission to read or write to the metafile. You can check the location of the metafile for backup by using the `drmsqlinit` command, and the location of the metafile for restoration by using the `drmsqlcat` command.
DRM-11017	A timeout error occurred.	*(For GUI)* *Cause* A timeout occurred. *Action* Make sure that SQL Server is in an appropriate status, and then retry the operation. If the same message reappears, check the value for the VDI metafile creation timeout in the Application Agent settings, and change it if necessary. *(For CLI)* *Cause* A timeout error occurred during VDI metafile creation by using the

Message ID	Message Text	Description
		`drmsqlbackup` command. Alternatively, the VDI metafile application that was performed by using the `drmsqlrestore` command took a long time. A transaction log for an application other than Replication Manager Application Agent may have been undergoing backup while the `drmsqlbackup` command was executing. *Action* Check the status of the SQL Server, and then re-execute the command. If the same message is displayed repeatedly, check and reset the timeout value by using the `drmsqlinit` command.
DRM-11018	The user lacks appropriate permission to execute SQL statements.	*(For GUI)* *Cause* The user who manages Replication Manager Application Agent does not have permissions for executing SQL statements. *Action* Grant permissions for executing SQL statements to the user who manages Replication Manager Application Agent. *(For CLI)* *Cause* A user who does not have permission to execute SQL statements attempted to execute a statement. *Action* Make sure that the user has the appropriate permissions, and then re-execute the command.
DRM-11019	An attempt to start SQL Server has failed.	*(For GUI)* *Cause* An attempt to start SQL Server has failed. *Action* Eliminate the cause of the error by referencing the Windows event log. If the problem is not resolved, collect the necessary data by referencing the troubleshooting explanation in the *Hitachi Command Suite Replication Manager Configuration Guide*, and then contact the Support Center. *(For CLI)*

Message ID	Message Text	Description
		Cause This message is output when an attempt to start SQL Server fails. *Action* Examine the Windows event log and then remove the cause of the error. If the same message reappears after removing the cause of the error, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect all the required data, and then contact your support center.
DRM-11020	An attempt to operate the virtual device interface has failed.	*(For GUI)* *Cause* An attempt to operate a virtual device has failed. *Action* Eliminate the cause of the error by referencing the Windows event log. If the problem is not resolved, collect the necessary data by referencing the troubleshooting explanation in the *Hitachi Command Suite Replication Manager Configuration Guide*, and then contact the Support Center. *(For CLI)* *Cause* This message is output when an attempt to operate a virtual device interface fails. *Action* Examine the Windows event log and then remove the cause of the error. If the same message reappears after removing the cause of the error, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect all the required data, and then contact your support center.
DRM-11021	An attempt to gather information from SQL Server has failed.	*(For GUI)* *Cause* An attempt to collect information from SQL Server has failed. *Action* A message was returned from SQL Server while the SQL statement was being executed. Eliminate the cause of

Message ID	Message Text	Description
		the error by referencing the SQL Server documentation. For example, a database whose name uses multibyte characters of 3 or more bytes for one character might exist in the SQL Server instance. If necessary, collect the SQL Server error log and the Windows event log, and check the status of the OS and SQL Server. If no abnormality is found in the OS or SQL Server, contact the Support Center. *(For CLI)* *Cause* This message is output when an attempt to gather SQL Server information fails. *Action* A message was returned from SQL Server during execution of an SQL statement. Check the error code and the details indicated in the message, see the SQL Server documentation, and then remove the cause of the error. For example, a database whose name uses multibyte characters of 3 or more bytes for one character might exist in the SQL Server instance. Collect the SQL Server error log and the Windows event log as required, and then check the status of the OS or the SQL Server. If you cannot detect any problems, contact your support center.
DRM-11022	An attempt to allocate the object and check the structural consistency has failed.	*(For GUI)* *Cause* An attempt to check the allocation and structural consistency of an object in SQL Server has failed. *Action* A message was returned from SQL Server while the SQL statement was being executed. Eliminate the cause of the error by referencing the SQL Server documentation. If necessary, collect the SQL Server error log and the Windows event log, and check the status of the OS and SQL Server. If no abnormality is found in the OS or SQL Server, contact the Support Center. *(For CLI)* *Cause*

Message ID	Message Text	Description
		This message is output when an attempt to allocate an object and check the structural consistency fails. *Action* A message was returned from SQL Server during execution of an SQL statement. Check the error code and the details indicated in the message, see the SQL Server documentation, and then remove the cause of the error. Collect the SQL Server error log and the Windows event log as required, and then check the status of the OS or the SQL Server. If you cannot detect any problems, contact your support center.
DRM-11100	The specified database is offline.	*Cause* The specified database is offline, so backup processing cannot be executed. *Action* Place the database online or exclude the database where the error occurred from command targets.
DRM-11101	The specified database is currently restored.	*Cause* The specified database has been restored, but not recovered. *Action* If the `drmsqlbackup` command or `drmsqllogbackup` command was used, recover the target database and then re-execute the command. If the `drmsqlrestore` command was used, recover or delete the target database and then re-execute this command.
DRM-11102	The specified database is being recovered.	*Cause* The specified database is currently being recovered and cannot be used in the query. *Action* Wait a short while, and then re-execute the command.
DRM-11103	The specified database is suspect.	*(For GUI)* *Cause* The SQL database is in a status in which recovery is unavailable. *Action*

Message ID	Message Text	Description
		Make sure that the target SQL database is in an appropriate status, and then retry the operation. *(For CLI)* *Cause* The database could not be recovered. *Action* Check the status of the target database, and then re-execute the command. If you cannot restore the database status to either of the following statuses, start processing from restoration: • At backup or transaction log backup: Online • At recovery: Being read or read-only
DRM-11104	The file name of the specified database could not be found.	*Cause* For some reason, the file name of the specified database could not be found. For example, backup might have been performed with an unknown database owner. *Action* To continue, check the status of the database.
DRM-11105	The attribute of the specified database is read-only.	*Cause* - *Action* Check the status of the target database, and then re-execute the command.
DRM-11107	The specified database information could not be obtained.	*Cause* This message is output if the information for the target database could not be obtained. *Action* Collect the SQL Server error log and Windows event log, check the OS status and SQL Server status, and then contact your support center.
DRM-11109	The specified database is in standby mode.	*Cause* This message is output when the specified database is in the standby mode. *Action*

Message ID	Message Text	Description
		Execute the `drmsqlrecover` command without specifying the `-undo` option to recover the database.
DRM-11112	Automatic recovery did not finish.	*Cause* This message is output when automatic restoration does not finish within a certain time. *Action* Change the values of `SVC_RETRY_TIME` and `SVC_RETRY_WAIT` in the `init.conf` file, and then re-execute the command.
DRM-11113	The DATABASEPROPERTY function detected an invalid return code.	*(For GUI)* *Cause* An invalid value was detected while the status of the SQL database was being acquired. *Action* Collect the SQL Server error log and the Windows event log, and check the status of the OS and SQL Server. If no abnormality is found in the OS or SQL Server, contact the Support Center. *(For CLI)* *Cause* This message is output when an invalid value is detected during database status acquisition. *Action* Collect the SQL Server error log and the Windows event log, check the status of the OS and SQL Server, and then contact your support center.
DRM-11500	Exchange Server information could not be acquired.	*(For GUI)* *Cause* The obtained Exchange Server settings information is invalid. *Action* Make sure that the services required to start Exchange Server are running, and check the Exchange settings. *(For CLI)* *Cause* Exchange Server information could not be obtained when the user executed a command. *Action*

Message ID	Message Text	Description
		Check the settings for Exchange Server. If the settings are incorrect, check that the service used to start Exchange Server is running.
DRM-11501	The system has been returned to pre-failure status.	*(For GUI)* *Cause* The status has been reverted to that before the operation was performed, because restoration processing has failed. *Action* Resolve the cause of the error, and then retry the operation. *(For CLI)* *Cause* Since an attempt to perform restore processing has failed, the following files have been returned to their previous statuses: • Data files (`*.edb` or `*.stm`) • Transaction log files (`*.log`) • Check point files (`*.chk`) *Action* Remove the cause of the error, and re-execute the restore command.
DRM-11502	Mounting cannot take place, since a database inconsistency exists.	*(For GUI)* *Cause* The database contains an inconsistency, because an attempt to perform restoration processing failed. *Action* Resolve the cause of the error, and then retry the operation. *(For CLI)* *Cause* Restore processing has failed because an inconsistency exists in the database. *Action* Remove the cause of the error, and then re-execute the restore command.
DRM-11503	An attempt to execute the ESEUTIL command failed.	*(For GUI)* *Cause* An error occurred during a database consistency check. *Action*

Message ID	Message Text	Description
		Resolve the cause of the error, and then retry the operation. *(For CLI)* *Cause* An error occurred when an attempt was made to check the compatibility of the database. *Action* Remove the cause of the error, and then re-execute the command.
DRM-11504	An internal error occurred.	*(For GUI)* *Cause* An unknown error occurred. *Action* If a code and detailed message were displayed with this message, see the Exchange Server manual and resolve the cause of the error. If necessary, collect the Windows event logs, and check the status of the OS and Exchange Server. If the problem is still not resolved, check the troubleshooting items given in the product manual, collect the appropriate materials, and then contact the Support Center. *(For CLI)* *Cause* An unknown error occurred. *Action* Refer to the documentation for Exchange Server and correct the error according to the error code and detailed message that appear with this message. You may have to check the statuses of the OS and Exchange Server in the Windows event log as required. If there is no problem in the OS or Exchange Server, contact your support center.
DRM-11505	An error occurred during the Information Store Service processing.	*(For GUI)* *Cause* 1. The information store service is not running normally. 2. A timeout occurred during a status transition for the information store service. 3. An operation was performed for the information store service from an external source during

Message ID	Message Text	Description
		command execution, causing a change to an unexpected status. 4. The information store service has not started, even though the information store cluster resource is online in a cluster environment. *Action* See the Exchange Server manual, and make sure that the Microsoft Exchange Information Store service is running normally. *(For CLI)* *Cause* This can be due to any of the following: • The Information Store Service is not functioning properly. • A timeout occurred during an Information Store Service status change. • An unexpected status was entered because an external operation was performed on the Information Store Service while the command was executed. • In a cluster environment, even though the information store of the cluster resource was online, the Information Store Service was not running. *Action* See the Exchange Server documentation, and check whether the Information Store Service is operating properly. If the message DRM-11508 is output as the cause, adjust the values of the `SVC_RETRY_TIME` or `SVC_RETRY_WAIT` field in the `init.conf` file. If another cause is indicated, check as indicated.
DRM-11506	An attempt to start the Information Store Service has failed.	*(For GUI)* *Cause* An attempt to start the information store service has failed. *Action* See the Exchange Server manual, and make sure that the information store service is running normally. *(For CLI)* *Cause*

Message ID	Message Text	Description
		This message is output when an attempt to start the Information Store Service fails. *Action* Make sure that the Information Store Service is running correctly. If the message DRM-11508 is output as the cause, adjust the values of the `SVC_RETRY_TIME` or `SVC_RETRY_WAIT` field in the `init.conf` file. If another cause is indicated, check as indicated.
DRM-11507	An exception occurred with the status of the Information Store Service.	*(For GUI)* *Cause* An operation was performed for the information store while an operation related to the information store was executing, causing the status to change. Alternatively, the Microsoft Exchange Information Store service has not started, even though a cluster resource in the cluster environment is online. *Action* Do not perform operations for the information store while an operation related to the information store is executing. For a cluster environment, if the information store cluster resource is online, make sure that the Microsoft Exchange Information Store service has started. *(For CLI)* *Cause* This can be due to any of the following: • An unexpected status was entered because an external operation was performed on the Information Store Service while the command was executed. • In a cluster environment, even though the information store of the cluster resource was online, the Information Store Service was not running. *Action* Make sure that no external operations are performed on the Information Store Service while the command is

Message ID	Message Text	Description
		executing. Also, make sure that the Information Store Service is running when the information store of the cluster resource is online.
DRM-11508	A timeout occurred.	*(For GUI)* *Cause* A timeout has occurred. *Action* Check the other message displayed at the same time. *(For CLI)* *Cause* This message is output when a timeout occurs. *Action* Check the other message output at the same time, and act accordingly.
DRM-11509	The ESEUTIL command returned the error.	*(For GUI)* *Cause* An error occurred during a database consistency check. *Action* Resolve the cause of the error, and then retry the operation. *(For CLI)* *Cause* An error occurred when a check for the database compatibility was executed. *Action* Remove the cause of the error, and then re-execute the command.
DRM-11602	An internal error occurred.	*Cause* An unknown internal error occurred. *Action* Contact your support center. Refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect the necessary data, and then contact your support center.
DRM-11603	An attempt to generate the object has failed.	*Cause* An attempt to generate an object has failed. *Action*

Message ID	Message Text	Description
		Examine the system log to check whether there is a problem in the OS.
DRM-12500	An attempt to access the remote directory has failed.	*Cause* An attempt to access the remote directory on the FTP server has failed. *Action* See the message that is displayed with this message, and make sure of the following: • That the user ID and password are correct. • That the FTP service is running. • That the target directory exists. • That the target directory or file have sufficient write permission.
DRM-12501	The user does not have execution permission for the file.	*Cause* Command execution failed because there is no execution permission for the command. *Action* Make sure that the specified file is executable and the user has permission to execute the specified file.
DRM-12502	The target backup catalog file does not exist on the FTP server.	*Cause* The target backup catalog file was not found in the specified directory on the FTP server. *Action* Make sure that the target backup catalog file exists in the FTP server. If it does not exist, create or copy the backup catalog file and then re-execute the command.
DRM-12503	The target file does not exist.	*Cause* The temporary directory for the extended command was not found. *Action* Execute the check tool for operation definition files, and then re-execute the command.
DRM-12504	An error occurred during Active Directory processing.	*Cause* The system could not connect to the domain controller. *Action* Determine if you can establish connection to the domain controller

Message ID	Message Text	Description
		using the logon user name and password. Alternatively, determine if the domain controller, the DNS service, and the network are operating properly. If required, collect event log information from the server that runs this program, the domain controller, and the DNS service, and check the operating system status.
DRM-14000	An attempt to start the service has failed.	*Cause* This message is output when an attempt to start a service fails. *Action* Refer to the OS error code displayed with this message and the Windows event log to remove the cause of the error. If the same message reappears after removing the cause of the error, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect all the required data, and then contact your support center.
DRM-14001	An attempt to stop the service has failed.	*Cause* This message is output when an attempt to stop a service fails. *Action* Refer to the OS error code displayed with this message and the Windows event log to remove the cause of the error. If the same message reappears after removing the cause of the error, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect all the required data, and then contact your support center.
DRM-14002	The service control manager could not be opened.	*Cause* This message is output when an attempt to open the service control manager fails. *Action* Refer to the OS error code displayed with this message and the Windows event log to remove the cause of the error. If the same message reappears after removing the cause of the error, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect all the required data, and then contact your support center.

Message ID	Message Text	Description
DRM-14003	An attempt to acquire information on the service has failed.	*Cause* This message is output when an attempt to acquire information on the service fails. *Action* Refer to the OS error code displayed with this message and the Windows event log to remove the cause of the error. If the same message reappears after removing the cause of the error, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect all the required data, and then contact your support center.
DRM-14004	An attempt to generate the thread has failed.	*Cause* This message is output when an attempt to generate a thread fails. *Action* Refer to the OS error code displayed with this message and the Windows event log to remove the cause of the error. If the same message reappears after removing the cause of the error, contact your support center. If the same message reappears after removing the cause of the error, refer to the troubleshooting explanation in the manual *Replication Manager Application Agent CLI User Guide*, collect all the required data, and then contact your support center.
DRM-14005	The -s option is required to execute a backup server user script.	*Cause* The `-s` option was not specified when the user script was executed at the remote site. *Action* If the user script is executed at the remote site, specify the host name by the `-s` option.
DRM-14006	The method used to specify the site name section is invalid.	*Cause* The method used to specify the site name section in the definition file for the cascade configuration is invalid. *Action* Correct the contents of the definition file for the cascade configuration, and then re-execute the command.

Message ID	Message Text	Description
		For details on the definition file for the cascade configuration, see the *Replication Manager Application Agent CLI User Guide*.
DRM-14007	An invalid parameter was specified.	*Cause* An invalid parameter was specified in the definition file for the cascade configuration. *Action* Correct the contents of the definition file for the cascade configuration, and then re-execute the command. For details on the definition file for the cascade configuration, see the *Replication Manager Application Agent CLI User Guide*.
DRM-14008	The maximum specifiable length was exceeded.	*Cause* In the definition file for the cascade configuration, there is a parameter that exceeds the maximum specifiable length. *Action* Correct the contents of the definition file for the cascade configuration, and then re-execute the command. For details on the definition file for the cascade configuration, see the *Replication Manager Application Agent CLI User Guide*.
DRM-14009	The specified character string is invalid.	*Cause* In the definition file for the cascade configuration, there is a parameter whose character string is invalid. *Action* Correct the contents of the definition file for the cascade configuration, and then re-execute the command. For details on the definition file for the cascade configuration, see the *Replication Manager Application Agent CLI User Guide*.
DRM-14010	The specified numerical value is invalid.	*Cause* In the definition file for the cascade configuration, there is a parameter whose value is invalid. *Action* Correct the contents of the definition file for the cascade configuration, and then re-execute the command.

Message ID	Message Text	Description
		For details on the definition file for the cascade configuration, see the *Replication Manager Application Agent CLI User Guide*.
DRM-14011	A specified parameter can only be specified once.	*Cause* In the definition file for the cascade configuration, there are multiple descriptions for a parameter for which multiple descriptions are not allowed. *Action* Correct the contents of the definition file for the cascade configuration, and then re-execute the command. For details on the definition file for the cascade configuration, see the *Replication Manager Application Agent CLI User Guide*.
DRM-14012	The parameters are not specified in the correct order.	*Cause* The order of parameters in the definition file for the cascade configuration is not correct. *Action* Correct the contents of the definition file for the cascade configuration, and then re-execute the command. For details on the definition file for the cascade configuration, see the *Replication Manager Application Agent CLI User Guide*.
DRM-14013	A transaction log error was detected during verification processing.	*Cause* This message is output when a transaction log error is detected during verification. *Action* Using either the Windows event log on the backup server or the information output by executing the `ESEUTIL` command with the `/ml` option on the database server, check for any abnormalities in the transaction logs, resolve any problems, and then re-execute the backup command. The base name specified for the `/ml` option of the `ESEUTIL` command can be confirmed by looking at the KAVX0282-E message output to the standard log (`drm_output.log`) on the backup server.

Message ID	Message Text	Description
		For more information about how to use the ESEUTIL command as well as how to troubleshoot problems, see the Exchange Server documentation.

Messages with IDs beginning with KAIB

This section describes messages related to the installer for Hitachi Command Suite products.

KAIB00000 - KAIB09999

The following table describes messages KAIB00000 to KAIB09999, which are related to the installer for Hitachi Command Suite products.

Table 2-2 KAIB00000 - KAIB09999 (messages related to the installer for Hitachi Command Suite products)

Message ID	Message Text	Description
KAIB00100-I	Hitachi Command Suite services are running on the management server. These services will stop if you continue the installation. To continue, click [OK].	*Cause* Hitachi Command Suite services are running on the management server. *Action* To stop Hitachi Command Suite services, click [**OK**] and continue your installation.
KAIB00101-I	Hitachi Command Suite services are running on the management server. These services will stop if you continue the removal. To continue, click [OK].	*Cause* Hitachi Command Suite services are running on the management server. *Action* To stop Hitachi Command Suite services, click [**OK**] and continue your removal process.
KAIB00103-I	If you are using any of the following products on this host, upgrade each product to version 8 or later, before starting operation: *Product name*	*Cause* - *Action* -
KAIB00104-I	If you are using any of the following products, upgrade each product, including any product used via remote connection, to version 8.5 or later, before starting operation: *Product name*	*Cause* - *Action* -

Message ID	Message Text	Description
KAIB00200-I	The files required for installation are on the media.	*Cause* - *Action* -
KAIB00225-I	There is *free-virtual-memory* MB of free virtual memory for the management server. Hitachi Command Suite requires *required-capacity*MB of virtual memory.	*Cause* - *Action* -
KAIB00226-I	The specified location has enough free capacity for installation. Disk: *disk*, Required: *required-capacity* MB, Available: *free-disk-capacity* MB Additional disk capacity may be needed if you back up the database at installation.	*Cause* - *Action* -
KAIB00227-I	OS version: *os-version*	*Cause* - *Action* -
KAIB00250-I	The HiRDB/ClusterService _HD1 service is stopped.	*Cause* - *Action* -
KAIB00251-I	The HiRDB/EmbeddedEdition _HD1 service is running.	*Cause* - *Action* -
KAIB00252-I	The installed Hitachi Command Suite version can be updated.	*Cause* - *Action* -
KAIB00253-I	No program is accessing the database from another machine.	*Cause* - *Action* -
KAIB00254-I	Hitachi Command Suite Common Component (32-bit) is not installed.	*Cause* - *Action* -

Message ID	Message Text	Description
KAIB00255-I	Hitachi Command Suite Common Component (32-bit) was installed. Location: *installation-directory*	*Cause* - *Action* -
KAIB00256-I	Device Manager is not installed.	*Cause* - *Action* -
KAIB00257-I	Device Manager is installed. Location: *installation-directory*	*Cause* - *Action* -
KAIB00258-I	Tiered Storage Manager is not installed.	*Cause* - *Action* -
KAIB00259-I	Tiered Storage Manager is installed. Location: *installation-directory*	*Cause* - *Action* -
KAIB00260-I	Replication Manager is not installed.	*Cause* - *Action* -
KAIB00261-I	Replication Manager is installed. Location: *installation-directory*	*Cause* - *Action* -
KAIB00262-I	Tuning Manager is not installed.	*Cause* - *Action* -
KAIB00263-I	Tuning Manager is installed. Location: *installation-directory*	*Cause* - *Action* -
KAIB00264-I	The HiRDB/ClusterService _HD1 service is stopped.	*Cause* - *Action* -

Message ID	Message Text	Description
KAIB00265-I	The HiRDB/EmbeddedEdition _HD1 service is running.	*Cause* - *Action* -
KAIB00266-I	Hitachi Command Suite Common Component (64-bit) is not installed.	*Cause* - *Action* -
KAIB00267-I	Hitachi Command Suite Common Component (64-bit) was installed. Location: *installation-directory*	*Cause* - *Action* -
KAIB00268-I	Products installed in the 32-bit application folder are moved to the 64-bit application folder (*folder-name*).	*Cause* - *Action* -
KAIB00269-I	CCI is not installed. The version of CCI that was provided with the Configuration Manager REST API will be used.	*Cause* - *Action* -
KAIB00270-I	The version of CCI that was provided with the Configuration Manager REST API is installed.	*Cause* - *Action* -
KAIB00271-I	CCI is installed.	*Cause* - *Action* -
KAIB00275-I	*host-name(ip-address)* is running.	*Cause* - *Action* -
KAIB00276-I	UDP port (162) is not being used.	*Cause* - *Action* -
KAIB00277-I	The Application Experience service is enabled.	*Cause* - *Action* -

Message ID	Message Text	Description
KAIB00279-I	The processing of *Product name* was successful.	*Cause* - *Action* -
KAIB00280-I	The Hitachi Command Suite products on the management server are in a cluster configuration (*cluster-mode(active node or standby node)*).	*Cause* - *Action* -
KAIB00281-I	Configuration Manager REST API was not removed because it was installed separately. If you no longer need Configuration Manager REST API, then remove it separately.	*Cause* Configuration Manager REST API was not removed because it was installed separately. *Action* If you no longer need Configuration Manager REST API, remove it separately.
KAIB00900-I	The prerequisites check has finished. If a checked item does not have a Pass status, resolve the problem.	*Cause* The prerequisites check is finished. *Action* If a checked item does not have a Pass status, resolve the problem.
KAIB09000-I	The Hitachi Command Suite services started successfully. To verify service status, select [Status] from the Start menu.	*Cause* - *Action* -
KAIB09001-I	The Hitachi Command Suite services stopped successfully. To verify service status, select [Status] from the Start menu.	*Cause* - *Action* -
KAIB09004-I	Export of platform shift tool has completed successfully. Transfer export data to the management server of the shift. Export data path: *Export data path*	*Cause* - *Action* -
KAIB09005-I	Import of platform shift tool has completed successfully.	*Cause* - *Action* -

KAIB10000 - KAIB19999

The following table describes messages KAIB10000 to KAIB19999, which are related to the installer for Hitachi Command Suite products.

Table 2-3 KAIB10000 - KAIB19999 (messages related to the installer for Hitachi Command Suite products)

Message ID	Message Text	Description
KAIB10000-W	To access Tuning Manager you must run the htmsetup command after the installation.	*Cause* Unable to obtain Tuning Manager information. *Action* To access Tuning Manager you must run the `htmsetup` command after the installation.
KAIB10002-W	This location does not have enough space for the installation. Add more space or change the location. Disk: *Disk*, Required: *Capacity necessary*MB, Available: *Disk free space*MB	*Cause* There is not enough space for the installation. *Action* This location does not have enough space for the installation. Add more space or change the location.
KAIB10003-W	This location does not have enough space for the installation. Add more space. Disk: *Disk*, Required: *Capacity necessary*MB, Available: *Disk free space*MB	*Cause* There is not enough space for the installation. *Action* This location does not have enough space. Add more space or change the location.
KAIB10004-W	If you continue the removal, all files and folders under the target folder in the confirmation screen will be removed. Do you want to continue?	*Cause* This is a removal confirmation. *Action* If you continue the removal, all files and folders under the target folder in the confirmation screen will be removed.
KAIB10005-W	The installation host name is too long. Modify the host name to be fewer than 128 characters or specify an IP address in the installation window.	*Cause* The installation host name is too long. *Action* The management server host name is too long. Modify the host name to be fewer than 128 characters or specify an IP address in the installation window.
KAIB10006-W	The following folders will be removed for the backup. *backup folder*	*Cause* This backup folder already exists. *Action*

Message ID	Message Text	Description
	This folder will be deleted because the backup file folder specified already exists. To continue, click the [OK].	Remove the existing folder or specify another one.
KAIB10007-W	Virtual memory free space for the management server is *Free space of virtual memory*MB. Hitachi Command Suite requires *capacity-necessary*MB of virtual memory, so you must add more. Lack of free space may lead to unstable system and unable to run program.	*Cause* Not enough virtual memory free space for the management server. *Action* Add more space.
KAIB10008-W	Virtual memory free space for the management server is *free-virtual-memory*MB. Hitachi Command Suite requires *required-capacity*MB of virtual memory, so you must add more. Lack of free space may lead to unstable system and unable to run program. Note that Hitachi Command Suite services are running and some virtual memory is being consumed.	*Cause* There may not be enough virtual memory. *Action* Add more virtual memory if necessary. Note that Hitachi Command Suite services are running and some virtual memory is being consumed. If you stop Hitachi Command Suite services and restart Prerequisite Checker, you can have more accurate size.
KAIB10009-W	A connectivity check was performed for the local host, but there was no response. A communication error may have occurred because Hitachi Command Suite products perform communications using the local loopback address (localhost and 127.0.0.1) or the host name as the destination. Verify the local loopback address and the host name settings. Depending on network settings, this message may appear even if the local loopback address and the host name are set correctly. If this is the case, ignore this message and continue the installation.	*Cause* A connectivity check was performed for the local host, but there was no response. *Action* Verify the local loopback address and the host name settings.
KAIB10010-W	A connectivity check was performed for *host-name-or-*	*Cause*

Message ID	Message Text	Description
	ip-address, but there was no response. A communication error may have occurred because Hitachi Command Suite products perform communications using *host-name-or-ip-address* as the destination. Verify the value. Depending on network settings, this message may appear even if there is no problem with the specified value. If this is the case, ignore this message and continue the installation.	A network connectivity check was conducted for the specified value, but there was no response. *Action* Verify the specified value.
KAIB10011-W	Device Manager UDP port(162) for receiving SNMP Traps is in use by another application.	*Cause* Device Manager UDP port(162) for receiving SNMP Traps is in use by another application. *Action* Device Manager port for receiving SNMP Traps is in use by another application.
KAIB10012-W	Hitachi Command Suite is not supported on this OS. Verify which OSs are supported for the Hitachi Command Suite.	*Cause* Hitachi Command Suite is not supported on this OS. *Action* Verify the OSs supported for the Hitachi Command Suite.
KAIB10013-W	Remote connection information cannot be obtained. This is not a problem if Tuning Manager is not connected remotely.	*Cause* Remote connection information cannot be obtained. *Action* This is not an issue if Tuning Manager is not connected remotely.
KAIB10019-W	Processing cannot continue because at least one file at the installation destination is currently in use. Check whether any Hitachi Command Suite programs are running. If a program is running, wait until it finishes. If a program is waiting for user input, exit the program. If there are not any Hitachi Command Suite programs running, another program might be using a file	*Cause* Processing cannot continue because at least one file at the installation destination is currently in use. *Action* Check whether any Hitachi Command Suite programs are running. If a program is running, wait until it finishes. If a program is waiting for user input, exit the program. If there are not any Hitachi Command Suite programs running, another program might be using a file

Message ID	Message Text	Description
	temporarily. Check whether anti-virus software or a program that regularly accesses installed files is being used. If such a program is being used, prevent the program from running during the installation. Note: To view a list of the files in use, see the following: *filename*	temporarily. Check whether anti-virus software or a program that regularly accesses installed files is being used. If such a program is being used, prevent the program from running during the installation.
KAIB10020-W	Processing cannot continue because at least one file at the installation destination is currently in use. Check whether any Hitachi Command Suite programs are running. If a program is running, wait until it finishes. If a program is waiting for user input, exit the program. If there are not any Hitachi Command Suite programs running, another program might be using a file temporarily. Check whether anti-virus software or a program that regularly accesses installed files is being used. If such a program is being used, prevent the program from running during the removal. Note: To view a list of the files in use, see the following: *filename*	*Cause* Processing cannot continue because at least one file at the installation destination is currently in use. *Action* Check whether any Hitachi Command Suite programs are running. If a program is running, wait until it finishes. If a program is waiting for user input, exit the program. If there are not any Hitachi Command Suite programs running, another program might be using a file temporarily. Check whether anti-virus software or a program that regularly accesses installed files is being used. If such a program is being used, prevent the program from running during the removal.
KAIB10021-W	If you are using any of the following products on this host, you need to upgrade each product to version 8 or later: *Product name*	*Cause* - *Action* -
KAIB10022-W	If you are using any of the following products, you need to upgrade each product, including any product used via remote connection, to version 8.5 or later: *Product name*	*Cause* - *Action* -
KAIB10200-W	The Hitachi Command Suite services cannot be stopped. Stopping these services may be delayed. Click Retry.	*Cause* The Hitachi Command Suite services cannot be stopped.

Message ID	Message Text	Description
	If you cannot stop the services, to determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	Causes include: - The management server is running, and stopping the service may be delayed. *Action* Click Retry. If you cannot stop the services, to determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.
KAIB10201-W	Unable to start the SLP service, but the installation will continue. After the installation, start the SLP service.	*Cause* Unable to start SLP service. *Action* After the installation, start the SLP service.
KAIB10202-W	Unable to release the SLP service, but the removal will continue. After the removal, release the SLP service.	*Cause* Unable to release SLP service. *Action* After the removal, release the SLP service.
KAIB10203-W	Unable to set up SMI-S. To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	*Cause* Unable to set up SMI-S. *Action* To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting.
KAIB10204-W	Unable to access Tuning Manager, but the installation will continue. After the installation, run the htmsetup command to configure Tuning Manager access.	*Cause* Unable to communicate with Tuning Manager. *Action* After the installation, run the `htmsetup` command to configure Tuning Manager access.
KAIB10205-W	The Hitachi Command Suite services cannot be stopped, but the installation completed successfully. Stopping these services may be delayed. Please wait for a while, and then manually stop the services.	*Cause* The Hitachi Command Suite services cannot be stopped. Causes include: • The management server is running, and stopping the service may be delayed. *Action*

KAIB19000-W	This location might not have enough space for export data. Add more space or change the location.	*Cause* There is not enough space for the installation.

Message ID	Message Text	Description
	Disk: *Disc*, Required: *Capacity necessary*MB, Available: *Disk free space*MB Do you want to continue? Enter Y to ignore and continue, N to cancel.	*Action* This location might not have enough space for export data. Add more space or change the location.

KAIB20000 - KAIB29999

The following table describes messages KAIB20000 to KAIB29999, which are related to the installer for Hitachi Command Suite products.

Table 2-4 KAIB20000 - KAIB29999 (messages related to the installer for Hitachi Command Suite products)

Message ID	Message Text	Description
KAIB20001-E	Only group *group-name* users can start the installer.	*Cause* Administrator permission is required for installation. *Action* Administrator permission is required for installation.
KAIB20002-E	Only group *group-name* user can perform a removal.	*Cause* Administrator permission is required for removal. *Action* Administrator permission is required for removal.
KAIB20003-E	Hitachi Command Suite cannot be installed in this OS version. Verify the supported OS versions for the Hitachi Command Suite.	*Cause* The OS version you are using is not supported. *Action* Verify the supported OS versions for the Hitachi Command Suite.
KAIB20004-E	Hitachi Command Suite cannot be installed in the Server Core environment. The installation will stop.	*Cause* The Server Core environment is not supported. *Action* Verify the supported Hitachi Command Suite environments.
KAIB20005-E	You cannot downgrade. A more recent version of Hitachi Command Suite is installed. The downgrade will stop.	*Cause* You cannot downgrade. *Action* Verify the Hitachi Command Suite version you are installing.

Message ID	Message Text	Description
KAIB20006-E	You cannot upgrade your *Product name* version. The upgrade will stop.	*Cause* You cannot upgrade your Hitachi Command Suite version. *Action* Verify that your version can be upgraded.
KAIB20007-E	You cannot perform the installation. An Hitachi Command Suite from a different vendor is installed. The installation will stop. Contact Support.	*Cause* Hitachi Command Suite provided by a different vendor is installed. *Action* Contact Support.
KAIB20008-E	You cannot perform the installation. The HiRDB/EmbeddedEdition _HD1 service is not running. The installation will stop. Start the HiRDB/EmbeddedEdition _HD1 service and try again.	*Cause* The HiRDB/EmbeddedEdition _HD1 service is not running. *Action* Start the HiRDB/EmbeddedEdition _HD1 before installing.
KAIB20010-E	Hitachi Command Suite services are running on the management server. Hitachi Command Suite products installed on this server are set up in a cluster environment. You must stop the services and manually set up the cluster environment.	*Cause* Existing Hitachi Command Suite products have been set up in the cluster environment. *Action* Hitachi Command Suite services are running on the management server. Hitachi Command Suite products installed on this server are set up in a cluster environment. You must stop the services and manually set up the cluster environment.
KAIB20011-E	The product cannot be installed because it is incompatible with an already-installed product. *Target product information "<exclusive-product-name> (version)"*	*Cause* The installation cannot be completed because an excluded product is installed. *Action* Uninstall the excluded product. Then, try the installation again.
KAIB20012-E	An internal error occurred. The installation will stop. To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	*Cause* An internal error occurred. *Action* To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting.

Message ID	Message Text	Description
KAIB20013-E	You cannot perform the removal. Products that depend on the Hitachi Command Suite are installed. Remove the following products, and then remove the Hitachi Command Suite. *Product name*	*Cause* Products depending on the Hitachi Command Suite are installed. *Action* After removing the products that depend on the Hitachi Command Suite, remove the suite.
KAIB20014-E	Hitachi Command Suite products on this server are set up in a cluster environment. You must remove them following the cluster environment removal procedure.	*Cause* Hitachi Command Suite products are set up in a cluster environment. *Action* You must remove them following the cluster environment removal procedure.
KAIB20015-E	You cannot perform the installation. An Hitachi Command Suite from a different vendor is installed. The installation will stop. Contact Support.	*Cause* Hitachi Command Suite provided by a different vendor is installed. *Action* Contact Support.
KAIB20016-E	You cannot perform the removal because the HiRDB/EmbeddedEdition _HD1 service is not running. Start the HiRDB/EmbeddedEdition _HD1 service and try again.	*Cause* The HiRDB/EmbeddedEdition _HD1 service is not running. *Action* Start the HiRDB/EmbeddedEdition _HD1 service and try again.
KAIB20017-E	You cannot perform the installation because the HiRDB/ClusterService _HD1 service is running. Stop the HiRDB/ClusterService _HD1 service and try again.	*Cause* The HiRDB/ClusterService _HD1 service is running. *Action* Stop the HiRDB/ClusterService _HD1 service and try again.
KAIB20018-E	You cannot perform the removal because the HiRDB/ClusterService _HD1 service is running. Stop the HiRDB/ClusterService _HD1 service and try again.	*Cause* The HiRDB/ClusterService _HD1 service is running. *Action* Stop the HiRDB/ClusterService _HD1 service and try again.
KAIB20019-E	The JDK was not found. Use the hcmds64chgjdk command to set the JDK. If you do not use the JDK that comes with the Hitachi Command Suite, you must install it separately.	*Cause* The JDK is not set appropriately. *Action* Use the `hcmds64chgjdk` command to set the JDK.

Message ID	Message Text	Description
		If you do not use the JDK that comes with the Hitachi Command Suite, you must install it separately.
KAIB20020-E	You must run setup.exe to install Hitachi Command Suite.	*Cause* The command is not valid. *Action* Run `setup.exe` to install Hitachi Command Suite.
KAIB20021-E	File "*file-name*", required for installation, cannot be read. Causes include: - File copying from the integrated installation media to a Windows drive failed. - A copied file was deleted from a Windows drive. - The name of the copy destination folder contains characters other than single-byte alphanumeric characters (excluding special characters and blanks). If you cannot resolve this problem, to determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	*Cause* A file required for installation cannot be read. Causes include: • File copying from the integrated installation media to a Windows drive failed. • A copied file was deleted from a Windows drive. • The name of the copy destination folder contains characters other than single-byte alphanumeric characters (excluding special characters and blanks). *Action* If you cannot resolve this problem, to determine the cause and resolve the problem, detailed investigation is required. KAIB20022-E	Unable to read file "*file-name*". To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	*Cause* Unable to read file. *Action* To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.
KAIB20023-E	<*Product name*> cannot be installed on a server on which a <*Installed Product name*>*Tuning Manager agents* has already been installed. To use <*Product name*> and *Tuning Manager agents* on the same server, install <*Product name*> first.	*Cause* Tuning Manager Agent is installed. *Action* Uninstall all instances of Tuning Manager Agent. Then, try the installation again.

Message ID	Message Text	Description
KAIB20024-E	A program on *ip-address* is connected to the management server database. Stop Tuning Manager server services on *ip-address*. The Tuning Manager server is probably accessing the database.	*Cause* A remote program is connected to the management server database. *Action* Stop the remotely connected Tuning Manager server service.
KAIB20025-E	Hitachi Command Suite cannot be installed because the Common Component path is too long.	*Cause* Hitachi Command Suite cannot be installed because the Common Component path is too long. *Action* Use the `hcmds64dbtrans` command to export Hitachi Command Suite data. Then, remove all products and reinstall them. Verify that the Common Component path does not exceed 72 bytes including "`\Base`". After reinstalling all products, import the data and reinstall Hitachi Command Suite.
KAIB20026-E	Hitachi Command Suite cannot be installed in the Minimal Server Interface environment. The installation will stop.	*Cause* The Minimal Server Interface environment is not supported. *Action* Verify the supported Hitachi Command Suite environments.
KAIB20027-E	Installation cannot be performed because the Application Experience service is disabled. Installation will now end. Change the Application Experience service start type to "Automatic", reboot the server, and then perform the installation again.	*Cause* The Application Experience service is disabled. *Action* Change the Application Experience service start type to "Automatic", reboot the server, and then perform the installation again.
KAIB20028-E	The JDK was not found. Use the hcmds64chgjdk command to set the JDK. If you do not use the JDK that comes with the Hitachi Command Suite, you must install it separately.	*Cause* The JDK is not set appropriately. *Action* Use the `hcmds64chgjdk` command to set the JDK. If you do not use the JDK that comes with the Hitachi Command Suite, you must install it separately.
KAIB20029-E	You cannot perform the installation because the HiRDB/	*Cause* The HiRDB/ClusterService _HD1 service is running.

Message ID	Message Text	Description
	ClusterService _HD1 service is running. Stop the HiRDB/ClusterService _HD1 service and try again.	*Action* Stop the HiRDB/ClusterService _HD1 service and try again.
KAIB20030-E	You cannot perform the installation. The HiRDB/EmbeddedEdition _HD1 service is not running. The installation will stop. Start the HiRDB/EmbeddedEdition _HD1 service and try again.	*Cause* The HiRDB/EmbeddedEdition _HD01service is not running. *Action* Start the HiRDB/EmbeddedEdition _HD1 before installing.
KAIB20031-E	A program on *IP-address* is connected to the management server database. Stop Tuning Manager server services on *IP-address*. The Tuning Manager server is probably accessing the database.	*Cause* A remote program is connected to the management server database. *Action* Stop the remotely connected Tuning Manager server service.
KAIB20032-E	You cannot perform the removal because the HiRDB/ClusterService _HD1 service is running. Stop the HiRDB/ClusterService _HD1 service and try again.	*Cause* The HiRDB/ClusterService _HD1 service is running. *Action* Stop the HiRDB/ClusterService _HD1 service and try again.
KAIB20033-E	You cannot perform the removal because the HiRDB/EmbeddedEdition _HD1 service is not running. Start the HiRDB/EmbeddedEdition _HD1 service and try again.	*Cause* The HiRDB/EmbeddedEdition _HD1 service is not running. *Action* Start the HiRDB/EmbeddedEdition _HD1 service and try again.
KAIB20034-E	Installation will stop because the evaluation version of Hitachi Command Suite is already installed. You cannot use the full version of Hitachi Command Suite together with the evaluation version. Uninstall the evaluation version, and then retry installation.	*Cause* You cannot use the full version of Hitachi Command Suite together with the evaluation version. *Action* Uninstall the evaluation version of Hitachi Command Suite, and then retry installation.
KAIB20035-E	The settings for managing a user account for a Hitachi Command Suite product that is installed on this server are incorrect. To determine the cause and resolve the problem, detailed investigation is required. Contact customer	*Cause* A Hitachi Command Suite product that is installed on this server contains incorrect settings for managing a user account. *Action*

	support, who may ask you to collect troubleshooting information.	To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIB20036-E	The procedure stopped because the file listed below exists. Either rename the file and then try again; or, move or delete the file, and then try again. *file-name*	*Cause* Make sure that no other file, hardware link, or symbolic link has the same name. *Action* If there is a file, hard link, or symbolic link that has the same name as the specified directory, delete or rename it, and then try again.
KAIB20038-E	At least one Hitachi Command Suite program is running. Wait until the program has finished, and then try the operation again.	*Cause* At least one Hitachi Command Suite program is running. *Action* Confirm that the programs have finished, and then try the operation again.
KAIB20039-E	Processing cannot continue because the following required value is not specified in the PATH system environment variable. Add the following value to the PATH system environment variable, and then try again. *path* If you performed the operation from the command prompt or PowerShell, add the value to the PATH system environment variable, and then restart the command prompt or PowerShell. Afterward, try performing the operation again.	*Cause* Processing cannot continue because the required value is not specified in the PATH system environment variable. *Action* Add the path in the message to the PATH system environment variable, and then try again. If you performed the operation from the command prompt or PowerShell, add the value to the PATH system environment variable, and then restart the command prompt or PowerShell. Afterward, try performing the operation again.
KAIB20040-E	The clustering configurations of existing Hitachi Command Suite products version 7 and version 8 products do not match. Uninstall the existing version 8 or later versions of Hitachi Command Suite products, and then install them again.	*Cause* The clustering configurations of existing Hitachi Command Suite products version 7 and version 8 products do not match. *Action* Uninstall the existing version 8 or later versions of Hitachi Command Suite products, and then install them again.
KAIB20041-E	The installation cannot continue because a previous	*Cause*

Message ID	Message Text	Description
	installation for a clustering environment did not finish. Use the procedure to migrate Hitachi Command Suite products version 8 or later to a clustering environment by referring to the manual.	The installation cannot continue because a previous installation for a clustering environment did not finish. *Action* Use the procedure to migrate Hitachi Command Suite products version 8 or later to a clustering environment by referring to the manual.
KAIB20042-E	If a product is to be installed as a cluster configuration, a local user cannot install the product. Install the product as a domain user.	*Cause* If a product is to be installed as a cluster configuration, a local user cannot install the product. *Action* Install the product as a domain user.
KAIB20043-E	The shared disk that stores the database file cannot be referenced. The owner of the resource group might be set to a different host. Migrate the resource group to the host on which the installation will be completed.	*Cause* The shared disk that stores the database file cannot be referenced. The owner of the resource group might be set to a different host. *Action* Migrate the resource group to the host on which the installation will be completed.
KAIB20044-E	The resource group (including the shared disk that stores the database file) was not found. Register the shared disk with the resource group.	*Cause* The resource group (including the shared disk that stores the database file) was not found. *Action* Register the shared disk with the resource group.
KAIB20045-E	The Hitachi Command Suite products on the management server are in a cluster configuration. Remove the product as a domain user.	*Cause* The Hitachi Command Suite products on the management server are in a cluster configuration. *Action* Remove the product as a domain user.
KAIB20046-E	The shared disk that stores the database file cannot be referenced. The owner of the resource group might be set to a different host. Migrate the resource group to the host on which the removal will be completed.	*Cause* The shared disk that stores the database file cannot be referenced. The owner of the resource group might be set to a different host. *Action* Migrate the resource group to the host on which the removal will be completed.
KAIB20048-E	The installation destination for Hitachi Command Suite	*Cause*

Message ID	Message Text	Description
	Common Component includes an unexpected directory, which prevents the creation of a symbolic link. To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.	The installation destination for Hitachi Command Suite Common Component includes an unexpected directory, which prevents the creation of a symbolic link. *Action* To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIB20101-E	The installation path contains an invalid character. Valid characters are: A-Z a-z 0-9 . _ ( ) and the space character.	*Cause* The installation path contains an invalid character. *Action* These characters can be used for the installation path: A-Z a-z 0-9 . _ ( ) and a blank space. If parentheses are used, check whether (x86) and half-width spaces are used in the actual folder path.
KAIB20103-E	Specify up to 64 bytes for the installation path.	*Cause* The installation path is too long. *Action* Specify up to 64 bytes for the installation path.
KAIB20104-E	An invalid character is included in the path specified for the location for storing database files. Specify the following characters for the path in which the files will be stored. A-Z a-z 0-9 . _ ( ) and the space character Note: The following paths cannot be specified: - The root of a drive - Paths that include OS-reserved words	*Cause* An invalid character is included in the database file path. *Action* Specify the following characters for the database file path. A-Z a-z 0-9 . _ ( ) and the space character. The following paths cannot be specified: • The root of a drive • Paths that include OS-reserved words
KAIB20106-E	Specify up to 90 bytes for the database file path.	*Cause* The path specified for storing database files is too long. *Action* Specify up to 90 bytes for the database file path.
KAIB20109-E	The IPv4 address or host name is too long. Specify up to 128	*Cause*

Message ID	Message Text	Description
	bytes for the IPv4 address or host name.	The IPv4 address or host name is too long. *Action* Up to 128 bytes are allowed for the IPv4 address or host name.
KAIB20110-E	An invalid character is included in the IPv6 address. Valid characters are: A-F a-f 0-9 . :	*Cause* The IPv6 address is invalid. *Action* Valid characters for the IPv6 address are: `A-F a-f 0-9 . :`
KAIB20111-E	The IPv6 address is too long. Specify up to 47 bytes for the IPv6 address.	*Cause* The IPv6 address is too long. *Action* Up to 47 bytes are allowed for the IPv6 address.
KAIB20113-E	An invalid character is included in the backup file path. Valid characters are: A-Z a-z 0-9 . _ ( ) and the space character.	*Cause* An invalid character is included in the database file path. *Action* Valid characters for the database file path are: `A-Z a-z 0-9 . _ ( )` and the space character.
KAIB20114-E	Specify up to 150 bytes for the backup file path.	*Cause* The path for backup files is too long. *Action* Specify up to 150 bytes for the backup file path.
KAIB20115-E	An error occurred. Hitachi Command Suite installation will stop. To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	*Cause* An error occurred. *Action* To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting.
KAIB20116-E	The property (*property name*) cannot be omitted. Specify the HINST_DBDIR or HINST_IPADDRESS property.	*Cause* `HINST_DBDIR` or `HINST_IPADDRESS` property must be specified when installing in the cluster environment. *Action* Specify the `HINST_DBDIR` or `HINST_IPADDRESS` property.

Message ID	Message Text	Description
KAIB20117-E	The property(*property name*) is invalid. Specify TRUE or FALSE.	*Cause* A value other than `TRUE` or `FALSE` is specified. *Action* Specify `TRUE` or `FALSE`.
KAIB20118-E	The property(*property name*) is invalid. Specify SMALL, MEDIUM, or LARGE.	*Cause* A value other than `SMALL`, `MEDIUM`, or `LARGE` is specified. *Action* Specify `SMALL`, `MEDIUM`, or `LARGE`.
KAIB20119-E	The property(*property name*) is invalid. Specify SMALL or MEDIUM.	*Cause* A value other than `SMALL` or `MEDIUM` is specified. *Action* Specify `SMALL` or `MEDIUM`.
KAIB20120-E	The property(*property name*) is invalid. The specified folder cannot be used.	*Cause* The `HINST_INSTDIR`, `HINST_DBDIR` or `HINST_DBBACKUPDIR` property is invalid. The specified drive cannot be accessed, or the drive does not exist. *Action* Specify a valid drive path.
KAIB20121-E	The program cannot be installed on a network drive. Specify a local disk.	*Cause* A network drive was specified for the program installation folder. *Action* Specify a local disk.
KAIB20122-E	The database files cannot be stored on a network drive. Specify a local disk.	*Cause* A network drive was specified for storing database files. *Action* Specify a local disk.
KAIB20123-E	The database backup files cannot be stored on a network drive. Specify a local disk.	*Cause* A network drive was specified for storing database backup files. *Action* Specify a local disk.
KAIB20124-E	Hitachi Command Suite cannot be installed on the path below. Specify a different path. - *list-of-prohibited-paths*	*Cause* Hitachi Command Suite cannot be installed on the specified path. *Action* Specify a different path.

Message ID	Message Text	Description
KAIB20125-E	The database files cannot be stored in the path below. Specify a different path. - *list-of-prohibited-paths*	*Cause* The database files cannot be stored on the specified path. *Action* Specify a different path.
KAIB20126-E	The backup files cannot be stored in the path below. Specify a different path. - *list-of-prohibited-paths*	*Cause* The backup files cannot be stored on the specified path. *Action* Specify a different path.
KAIB20127-E	Specify a resource group name that does not exceed 1,024 bytes.	*Cause* The specified resource group name is too long. *Action* Specify a resource group name that does not exceed 1,024 bytes.
KAIB20128-E	Specify a logical host name (client access point) that does not exceed 128 bytes.	*Cause* The specified logical host name (client access point) is too long. *Action* Specify a logical host name (client access point) that does not exceed 128 bytes.
KAIB20129-E	Specify an active node host name that does not exceed 128 bytes.	*Cause* The specified active node host name is too long. *Action* Specify an active node host name that does not exceed 128 bytes.
KAIB20130-E	Specify a standby node host name that does not exceed 128 bytes.	*Cause* The specified standby node host name is too long. *Action* Specify a standby node host name that does not exceed 128 bytes.
KAIB20131-E	The specified resource group is not found. Use the clustering management application to verify that the specified resource group is registered.	*Cause* The specified resource group is not found. *Action* Use the clustering management application to verify that the specified resource group is registered.
KAIB20132-E	The specified logical host name (client access point) is not a member of a resource group.	*Cause*

Message ID	Message Text	Description
	Use the clustering management application to verify configuration and ensure that you specify a logical host name (client access point) in a resource group.	The specified logical host name (client access point) is not a member of the resource group. *Action* Use the clustering management application to verify the configuration and ensure that you specify a logical host name (client access point) that is a member of a resource group.
KAIB20133-E	The shared disk providing the database store is not a member of a resource group. Use the clustering management application to verify configuration and ensure you specify a path on a shared disk in a resource group.	*Cause* The shared disk providing the database store is not a member of the resource group. *Action* Use the clustering management application to verify configuration and ensure that you specify a path on a shared disk that belongs to a resource group.
KAIB20134-E	The resource group name contains an invalid character. The following characters cannot be used: ! " &) * ^ | < >	*Cause* The resource group name contains an invalid character. *Action* Specify a resource group name that does not contain the following characters: ! " &) * ^ | < >
KAIB20135-E	Hitachi Command Suite products do not support a clustering environment with more than three nodes.	*Cause* Hitachi Command Suite products do not support a clustering environment with more than three nodes. *Action* -
KAIB20136-E	A database file created on the active node already exists in the specified database file storage destination. This means that the current installation as the active node is not possible. Complete one of the following options: - Install as the standby node. - Install as the active node by (1) deleting the database storage destination on the shared disk, then (2) installing as the active node.	*Cause* A database file created on the active node already exists in the specified database file storage destination. *Action* Install as the standby node. To install as the active node, (1) delete the database storage destination on the shared disk, then (2) reinstall as the active node.

Message ID	Message Text	Description
KAIB20137-E	No database file created on the active node exists in the specified database file storage destination. Installation as the standby node is not possible. The following are possible causes: - The database file storage destination that was specified on the active node, was not specified. - Installation has not been performed on the active node. To continue, specify the database file storage destination that was specified on the active node. If no installation occurred on the active node, then complete the installation now.	*Cause* No database file created on the active node exists in the specified database file storage destination. The following are possible causes: • The database file storage destination that was specified on the active node, is not specified. • No installation occurred on the active node. *Action* Specify the database file storage destination specified on the active node. If no installation occurred on the active node, then install on the active node now.
KAIB20138-E	Please specify *input-item(Resource group name or Logical host name or Active node host name or Standby node host name or Database folder)*.	*Cause* No information was specified. *Action* -
KAIB20139-E	The property(*property name*) is invalid. Specify ACTIVE or STANDBY.	*Cause* A value other than ACTIVE or STANDBY is specified. *Action* Specify ACTIVE or STANDBY.
KAIB20140-E	The property (*property name*) cannot be omitted. Specify the HINST_CLUSTER_RESOURCEGROUPNAME, HINST_CLUSTER_HOSTNAME_ACTIVE or HINST_CLUSTER_HOSTNAME_STANDBY property.	*Cause* `HINST_CLUSTER_RESOURCEGROUPNAME`, `HINST_CLUSTER_HOSTNAME_ACTIVE` or `HINST_CLUSTER_HOSTNAME_STANDBY` property must be specified when installing in the cluster environment. *Action* Specify the `HINST_CLUSTER_RESOURCEGROUPNAME`, `HINST_CLUSTER_HOSTNAME_ACTIVE` or `HINST_CLUSTER_HOSTNAME_STANDBY` property.
KAIB20200-E	An error for Hitachi Command Suite Common Components occurred. To determine the cause and resolve the problem, detailed investigation is required.	*Cause* An error for Hitachi Command Suite Common Components occurred. *Action*

	correct, and then retry the removal.	about javapathlocation, see the *Hitachi Command Suite Administrator Guide*.
KAIB40203-W	No SLP service is installed. After the installation is complete, if required, install OpenSLP and start the SLP service.	*Cause* No SLP service is installed. *Action* When you use the service Discovery function, install OpenSLP accompanying the OS, and then start the SLP service.
KAIB40204-W	This operating system is not supported for Tuning Manager version 8.5 or later. Install Tuning Manager on a different host, and then enable remote connection. For details about how to enable remote connection in Tuning Manager, see the Tuning Manager manuals.	*Cause* - *Action* -

KAIB50000 - KAIB59999

The following table describes messages KAIB50000 to KAIB59999, which are related to the installer for Hitachi Command Suite products.

Table 2-7 KAIB50000 - KAIB59999 (messages related to the installer for Hitachi Command Suite products)

Message ID	Message Text	Description
KAIB50006-E	The installation path contains an invalid character. Valid characters are: A-Z a-z 0-9 _ / Note that these directories cannot be specified: - /usr - /usr/local - /var - The root directory (/)	*Cause* The installation path contains an invalid character. *Action* These characters are valid for the installation path: `A-Z a-z 0-9 _ /`
KAIB50008-E	An invalid character is included in the database file path. Valid characters are: A-Z a-z 0-9 . _ /	*Cause* Invalid database path character. *Action* Use valid characters.
KAIB50018-E	The property(*Specified property*) is invalid.	*Cause* Invalid property name.

Message ID	Message Text	Description
		Action Invalid syntax.
KAIB50019-E	Syntax error. Usage: install.sh [-s [property=value] ...] -s silent mode Possible properties (see manual for more details): HINST_INSTDIR Installation directory [/opt/HiCommand] HINST_DBDIR Database directory [/var/opt/HiCommand/database] HINST_IPADDRESS Host name or IP address [`hostname`] HINST_DBBACKUP (TRUE|FALSE) [TRUE] HINST_DBBACKUPDIR Database backup directory [/var/opt/HiCommand/backup] HINST_HDVMHEAP (SMALL|MEDIUM|LARGE) [LARGE] HINST_RUNSERVICE (TRUE|FALSE) [TRUE] HINST_IGNORE_CAPACITY_CHECK (TRUE|FALSE) [FALSE] HINST_IGNORE_NETWORKING_CHECK (TRUE|FALSE) [FALSE] HINST_IGNORE_VIRTUAL_MEMORY_CHECK (TRUE|FALSE) [FALSE] Example: install.sh -s HINST_INSTDIR=/opt/HiCommand	*Cause* Syntax error. *Action* Invalid syntax.
KAIB50020-E	The specified property value(*Specified property*) is not in a valid format for the property(*Property*).	*Cause* Invalid property value. *Action* Invalid syntax.
KAIB50021-E	The specified property value(*Specified property*) is too long for the property(*Property*).	*Cause* Property value is too long. *Action* Please confirm the upper bound of the specified value referring to the manual.
KAIB50023-E	An invalid character is included in the backup file path. Valid characters are:	*Cause* Invalid character.

Message ID	Message Text	Description
	A-Z a-z 0-9 _ /	*Action* Use valid characters.
KAIB50024-E	The following kernel parameters are smaller than the minimum value. *Setting Information* *Action*	*Cause* The kernel parameters are smaller than the minimum value. *Action* Set adequate kernel parameters referring to the manual.
KAIB50025-E	The following shell limits are smaller than the minimum value. *Setting Information* *Action*	*Cause* The shell limits are smaller than the minimum value. *Action* Set adequate shell limits referring to the manual.
KAIB50026-E	The mount path contains an invalid character. Valid characters are: A-Z a-z 0-9 _ /	*Cause* The mount path contains an invalid character. *Action* Valid characters are: A-Z a-z 0-9 _ /
KAIB50027-E	The path of the directory to be used for the installation contains a symbolic link, which is not allowed. Please change the path of the installation directory. Directory to be used for the installation: *path contains a symbolic link*	*Cause* The path of the directory to be used for the installation contains a symbolic link, which is not allowed. *Action* Please change the installation directory.
KAIB50028-E	The path of the directory to be used for the installation contains a symbolic link, which is not allowed. Please remove Hitachi Command Suite and reinstall it in a different location. Directory to be used for the installation: *path contains a symbolic link*	*Cause* The path of the directory to be used for the installation contains a symbolic link, which is not allowed. *Action* Please remove Hitachi Command Suite and reinstall it in a different location.
KAIB50029-E	A specified argument is invalid.	*Cause* An invalid argument was specified. *Action* Specify the argument correctly.
KAIB50030-E	Prerequisite Checker cannot start because there is insufficient disk space.	*Cause* There is insufficient disk space to start Prerequisite Checker.

Message ID	Message Text	Description
	Disk: *disk*, Required: *required-space*MB, Available: *available-disk-space*MB	*Action* Verify that the required disk space is available.
KAIB51001-E	The installer must be run by a root user. The installation will stop.	*Cause* A non root user is performing the installation. *Action* Log in as an root user and perform the installation.
KAIB51002-E	Only root user can perform a removal. The removal will stop.	*Cause* A non root user cannot perform a removal. *Action* Removal must be performed by a root user.
KAIB51003-E	Hitachi Command Suite cannot be installed in this OS version. Verify the supported OS versions for the Hitachi Command Suite.	*Cause* The OS version you are using is not supported. *Action* Verify the supported OS versions for the Hitachi Command Suite.
KAIB51004-E	This installer is version *OS or architecture*. Verify the installation media or installer.	*Cause* The installer does not correspond to the OS or architecture. *Action* Verify if the installation media(or the installer) matches the server type (OS and/or processor architecture).
KAIB51005-E	Hitachi Command Suite cannot be installed in zones that are not global.	*Cause* Hitachi Command Suite cannot be installed in zones that are not global. *Action* Install on a global zone.
KAIB51006-E	You must install the JDK.	*Cause* You must install the JDK. *Action* You must install the JDK.
KAIB51007-E	The installation media file cannot run. Verify the mount options with the mount command. If the "noexec" option is used, re-mount the installation media without the "noexec" option.	*Cause* The installation media may be mounted with the "`noexec`"option. *Action* Verify the mount options with the `mount` command. If the "`noexec`"option is used, re-mount the installation media without the "`noexec`"option.

Message ID	Message Text	Description
	If you cannot resolve the problem, to determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	If you cannot resolve the problem, to determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.
KAIB51008-E	Unable to run a file on the installation media. The installation media may be damaged. To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	*Cause* The installation media may be damaged. *Action* To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.
KAIB51009-E	File "*file-name*", required for installation, cannot be read. Causes include: - The files on the installation media are insufficient, or you do not have execution permission. - The name of the mount point includes a character other than one-byte alphanumeric characters or "_". If you cannot resolve this problem, to determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	*Cause* A file required for installation cannot be read. Causes include: • The files on the installation media are insufficient, or you do not have execution permission. • The name of the mount point includes a character other than one-byte alphanumeric characters or "_". *Action* If you cannot resolve this problem, to determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.
KAIB51010-E	A file was not found. Install any packages that have not been installed: *file-information* Note: For library packages marked with an asterisk (*), install the 32-bit version.	*Cause* A package is not installed. *Action* Install any libraries that have not been installed.
KAIB51013-E	The removal has been canceled because you cannot use this directory. Specify another directory and try again.	*Cause* You are using this directory. *Action*

Message ID	Message Text	Description
		Specify another directory and try again.
KAIB51014-E	Device Manager is installed in directory *installation-directory*. If Device Manager is installed in these directories, it cannot be upgraded: - /usr - /usr/local - /var Remove Device Manager and install Hitachi Command Suite in another location.	*Cause* If Device Manager is installed in these directories, it cannot be upgraded: • `/usr` • `/usr/local` • `/var` *Action* Remove Device Manager and install Hitachi Command Suite in another location.
KAIB53007-E	The Hitachi Command Suite services cannot be stopped. Please wait for a while, and then try again. If this error happens again, to determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.	*Cause* The Hitachi Command Suite services cannot be stopped. Causes include: • The storage system is running and the service cannot be stopped. *Action* Please wait for a while, and then try again. If this error happens again, to determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.
KAIB59000-E	hc_exportdata directory already exists in enter path. You change a directory name or move it, and, please carry it out again.	*Cause* hc_exportdata directory already exists in enter path. *Action* You change a directory name or move it, and, please carry it out again.
KAIB59001-E	hc_exportdata directory does not exist anymore in the input storage. You confirm that hc_exportdata directory is stored, and, please carry it out again.	*Cause* hc_exportdata directory does not exist anymore in the input storage. *Action* You confirm that hc_exportdata directory is stored, and, please carry it out again.

KAIB60000 - KAIB69999

The following table describes messages KAIB60000 to KAIB69999, which are related to the installer for Hitachi Command Suite products.

Table 2-8 KAIB60000 - KAIB69999 (messages related to the installer for Hitachi Command Suite products)

Message ID	Message Text	Description
KAIB60000-I	System OS version: *os-name*	*Cause* - *Action* -
KAIB60001-I	This system was set up by selecting the Full option during the installation of *os-installation-option(Full installation or Server with a GUI)*.	*Cause* - *Action* -
KAIB60002-I	This system has sufficient virtual memory. (required amount = *required-virtual-memory* MB, available amount = *free-virtual-memory* MB)	*Cause* - *Action* -
KAIB60003-I	The installation destination has sufficient unused capacity. drive = *disk*, required capacity = *required-capacity* MB, unused capacity = *free-disk-capacity* MB	*Cause* - *Action* -
KAIB60004-I	*product-name* is not installed.	*Cause* - *Action* -
KAIB60005-I	*product-name* is installed. Version: *product-version* Installation path: *install-dir*	*Cause* - *Action* -
KAIB60006-I	The version of the JDK being used is different from the version that comes with the product.	*Cause* - *Action* -
KAIB60007-I	The target Device Manager for Tuning Manager is set as the local host.	*Cause* - *Action* -
KAIB60008-I	The Hitachi Command Suite products on the management server are not in a cluster configuration.	*Cause* - *Action*

Message ID	Message Text	Description
		-
KAIB60009-I	The installed Hitachi Command Suite products can be updated.	*Cause* - *Action* -
KAIB60010-I	The service HiRDB/ClusterService _HD1 is not running.	*Cause* - *Action* -
KAIB60011-I	The service HiRDB/EmbeddedEdition _HD1 is running.	*Cause* - *Action* -
KAIB60012-I	The edition of the product you attempted to install is the same as the edition of the currently installed product.	*Cause* - *Action* -
KAIB60014-I	No installed products conflict with Tuning Manager.	*Cause* - *Action* -
KAIB60016-I	No programs are accessing the database from another server.	*Cause* - *Action* -
KAIB60017-I	Current host name (128 bytes or less): *host-name*	*Cause* - *Action* -
KAIB60018-I	*host-name(IP-address)* is running.	*Cause* - *Action* -
KAIB60019-I	UDP port 162, which is used for receiving SNMP traps, is not currently in use.	*Cause* - *Action* -
KAIB60020-I	DCOM is enabled.	*Cause* - *Action*

Message ID	Message Text	Description
		-
KAIB60021-I	The Application Experience service is enabled.	*Cause* - *Action* -
KAIB60022-I	The service HiRDB/ ClusterService _HD1 is not running.	*Cause* - *Action* -
KAIB60023-I	The service HiRDB/ EmbeddedEdition _HD1 is running.	*Cause* - *Action* -
KAIB60025-I	The .NET Framework required for Automation Director is installed.	*Cause* - *Action* -
KAIB60026-I	None of the installed products conflict with Automation Director.	*Cause* - *Action* -
KAIB60027-I	The management server is set as a primary server.	*Cause* - *Action* -
KAIB60028-I	The Hitachi Command Suite products on the management server are in a cluster configuration.	*Cause* - *Action* -
KAIB60029-I	CCI is not installed. The version of CCI that was provided with the Configuration Manager REST API will be used.	*Cause* - *Action* -
KAIB60030-I	The version of CCI that was provided with the Configuration Manager REST API is installed.	*Cause* - *Action* -
KAIB60031-I	CCI is installed.	*Cause* - *Action*

Message ID	Message Text	Description
		-
KAIB60100-I	Hitachi Command Suite services are running on the server on which the products will be installed. Click OK to stop these services and continue with the installation.	*Cause* Hitachi Command Suite services are running on the server on which the products will be installed. *Action* To stop the Hitachi Command Suite product services, click **OK**, and then continue with the installation.
KAIB60102-I	If you are using any of the following products on this host, upgrade each product to version 8 or later, before starting operation: *product-name*	*Cause* - *Action* -
KAIB60103-I	To use Tuning Manager, upgrade all Tuning Manager agents on this host to version 8.5 or later, before starting operation.	*Cause* - *Action* -
KAIB60190-I	The following products will be removed: *product-name* After you click OK, the products will be removed in order. Please follow the on-screen instructions. Note: User operations are required during the removal. The all-in-one uninstaller checks the dependencies of each product, and prompts user to operate the removal of each product uninstaller in the order for removing these dependencies.	*Cause* - *Action* -
KAIB60191-I	The Hitachi Command Suite products were successfully removed.	*Cause* - *Action* -
KAIB62000-W	This OS does not support the Hitachi Command Suite all-in-one installer. Verify which OSs support the Hitachi Command Suite all-in-one installer. System OS version: *os-name*	*Cause* This OS does not support the Hitachi Command Suite all-in-one installer. *Action* Verify which OSs support the Hitachi Command Suite all-in-one installer.

Message ID	Message Text	Description
KAIB62001-W	Virtual memory is insufficient. Revise the virtual memory settings so that there is enough. (required amount = *required-virtual-memory* MB, available amount = *free-virtual-memory* MB) If virtual memory is insufficient, programs might not start or might be more unstable.	*Cause* Virtual memory is insufficient. *Action* Revise the virtual memory settings so that there is enough.
KAIB62002-W	Virtual memory is insufficient. Revise the virtual memory settings so that there is enough. (required amount = *required-virtual-memory* MB, available amount = *free-virtual-memory* MB) If virtual memory is insufficient, programs might not start or might be more unstable. Note that the currently available virtual memory is affected by any Hitachi Command Suite product services that are running. To more accurately measure the amount of available virtual memory, stop the Hitachi Command Suite product services, and then execute the system requirements checker.	*Cause* Virtual memory might be insufficient. *Action* Revise the virtual memory settings, and add more virtual memory, as necessary. Note that the currently available virtual memory is affected by any Hitachi Command Suite product services that are running. To more accurately measure the amount of available virtual memory, stop the Hitachi Command Suite product services, and then execute the system requirements checker.
KAIB62003-W	The installation destination might not have sufficient drive capacity for acquiring a database backup during the installation. We recommend freeing up the necessary capacity, or you can change the backup location to another drive that has available capacity. drive = *disk*, required capacity = *required-capacity* MB, unused capacity = *free-disk-capacity* MB Approximately *backup-capacity* MB is required for the backup.	*Cause* The installation destination might not have sufficient unused capacity. *Action* We recommend freeing up the necessary capacity, or you can change the backup location to another drive that has available capacity.
KAIB62004-W	The installation destination does not have sufficient unused capacity.	*Cause* The installation destination does not have sufficient unused capacity.

Message ID	Message Text	Description
	Free up the necessary capacity. drive = *disk*, required capacity = *required-capacity* MB, unused capacity = *free-disk-capacity* MB	*Action* Free up the required capacity. If not enough capacity can be freed up, remove the program, and then install it in a different location.
KAIB62005-W	The installation destination does not have sufficient unused capacity. Free up the necessary capacity, or for new installations, you can change the installation destination to another drive that has available unused capacity. drive = *disk*, required capacity = *required-capacity* MB, unused capacity = *free-disk-capacity* MB	*Cause* The installation destination does not have sufficient unused capacity. *Action* Free up the necessary capacity, or for new installations, you can change the installation destination to another drive that has available unused capacity. If not enough capacity can be freed up, remove the program, and then install it in a different location.
KAIB62006-W	Acquisition of remote connection information failed. If you do not plan to remotely connect to Tuning Manager, this is not a problem.	*Cause* Acquisition of remote connection information failed. *Action* If you do not plan to remotely connect to Tuning Manager, this is not a problem.
KAIB62007-W	The connection status with the local host was verified, but there was no response. Hitachi Command Suite products use a local loopback address (localhost or 127.0.0.1) or host name as the destination of their transmissions. A transmission error might have occurred because of this. Check the local loopback address and host name settings. Even if the local loopback address and host name settings are correct, this message is sometimes output, depending on the network settings. If that is the case, ignore this message, and continue with the installation.	*Cause* The connection status with the local host was verified, but there was no response. *Action* Verify the local loopback address and host name settings.
KAIB62008-W	The management server configuration could not be identified during the system requirements check.	*Cause* The management server configuration could not be identified during the system requirements check.

Message ID	Message Text	Description
	If Tuning Manager on this machine does not connect to Device Manager remotely, you can use the Hitachi Command Suite all-in-one installer. However, if Tuning Manager on this machine connects to Device Manager remotely, use the Tuning Manager installer instead.	*Action* If Tuning Manager on this machine does not connect to Device Manager remotely, you can use the Hitachi Command Suite all-in-one installer. However, if Tuning Manager on this machine connects to Device Manager remotely, use the Tuning Manager installer instead.
KAIB62009-W	DCOM is automatically enabled during the installation. The server must be restarted to apply this change.	*Cause* DCOM is automatically enabled during the installation. *Action* Restart the machine to apply the change.
KAIB62010-W	The SNMP trap reception function in Device Manager will be disabled because UDP port 162 is in use by another application. To use this function, change the settings of the application using UDP port 162.	*Cause* UDP port 162 is in use by another application. *Action* To use this function, change the settings for the application using UDP port 162.
KAIB62011-W	The port number used by the SNMP trap reception function in Compute Systems Manager will be changed to *port-number* because UDP port 162 is in use by another application. To use UDP port 162 in Compute Systems Manager, change the settings of the application currently using UDP port 162.	*Cause* UDP port 162 is in use by another application. *Action* To use UDP port 162 in Hitachi Compute Systems Manager, change the settings for the application currently using UDP port 162.
KAIB62012-W	Hitachi Command Suite is not supported on this OS. Verify the OSs supported for the Hitachi Command Suite. System OS version: *os-name*	*Cause* Hitachi Command Suite is not supported on this OS. *Action* Verify the OSs supported for the Hitachi Command Suite.
KAIB62021-W	Processing cannot continue because at least one file at the installation destination is currently in use. Check whether any Hitachi Command Suite programs are running. If a program is running, wait until it finishes. If	*Cause* Processing cannot continue because at least one file at the installation destination is currently in use. *Action* Check whether any Hitachi Command Suite programs are running. If a program is running, wait until it

Message ID	Message Text	Description
	a program is waiting for user input, exit the program. If there are not any Hitachi Command Suite programs running, another program might be using a file temporarily. Check whether anti-virus software or a program that regularly accesses installed files is being used. If such a program is being used, prevent the program from running during the installation. Note: To view a list of the files in use, see the following: *filename*	finishes. If a program is waiting for user input, exit the program. If there are not any Hitachi Command Suite programs running, another program might be using a file temporarily. Check whether anti-virus software or a program that regularly accesses installed files is being used. If such a program is being used, prevent the program from running during the installation.
KAIB62022-W	The CCI version that is currently installed on the management server is not supported by the Configuration Manager REST API. To use the Configuration Manager REST API, upgrade CCI to a recent, supported version before installing the Configuration Manager REST API.	*Cause* The version of CCI currently installed on the management server is not supported by the Configuration Manager REST API. *Action* To use the Configuration Manager REST API, upgrade CCI to a version that is supported by the Configuration Manager REST API. Then, install the Configuration Manager REST API.
KAIB62023-W	The Configuration Manager REST API cannot be installed because a file of the same name as the file to be installed already exists (*file-name*). To use the Configuration Manager REST API, rename, move, or delete the file, and then try again.	*Cause* Ensure that no file that has the same name as the file to be installed, exists. *Action* If there exists a file with a name that is identical to the name of the file to be installed, then either rename or delete the file, and then try again.
KAIB62100-W	An attempt to stop Hitachi Command Suite product services failed. Stopping services might take a while. Click Retry to attempt to stop the Hitachi Command Suite product services. If the services cannot be stopped, detailed investigation is required to determine the cause and resolve the problem. Contact the support center, who may ask you to collect troubleshooting information.	*Cause* An attempt to stop Hitachi Command Suite product services failed. The stopping of the services might have been delayed because the management server is running. *Action* Click **Retry** to stop the Hitachi Command Suite product services. If the services cannot be stopped, detailed investigation is required to determine the cause and resolve the problem. Contact the support center,

Message ID	Message Text	Description
		who may ask you to collect troubleshooting information.
KAIB62101-W	Hitachi Command Suite services cannot be registered in the cluster management application resource group. Complete the installation, and then run the hcmds64clustersrvupdate command to register Hitachi Command Suite services.	*Cause* Hitachi Command Suite services cannot be registered in the cluster management application resource group. *Action* Complete the installation, and then run the `hcmds64clustersrvupdate` command to register Hitachi Command Suite services.
KAIB62120-W	The discovery function will not run properly unless the OS is restarted.	*Cause* To enable DCOM, you must restart the OS. *Action* Restart the machine Compute Systems Manager was installed on.
KAIB62121-W	Are you sure you want to cancel the Hitachi Command Suite all-in-one installer?	*Cause* - *Action* -
KAIB62140-W	One or more existing backup folders will be deleted. Are you sure you want to delete the following folders? *backup-folder* If you do not want to lose the current backup files, copy them to another location before continuing with the installation. To continue the installation, click OK.	*Cause* One or more folders used for backing up files to already exist. *Action* If necessary, copy the backup files to another location, and then continue with the installation.
KAIB62141-W	Backup files already exist in the specified folder. If you continue the installation, the current backup files will be overwritten. If you do not want to overwrite the current backup files, specify another folder. Do you want to overwrite the backup files? Click Yes or No.	*Cause* Backup files already exist in the specified folder. *Action* If you do not want to overwrite the current backup files, specify another folder.
KAIB62143-W	If you are using any of the following products on this host, you need to upgrade each product to version 8 or later:	*Cause* - *Action*

Message ID	Message Text	Description
	product-name	-
KAIB62144-W	To use Tuning Manager, you need to upgrade all Tuning Manager agents on this host to version 8.5 or later.	*Cause* - *Action* -
KAIB62190-W	One or more of the Hitachi Command Suite products were not completely removed. If any errors occurred, resolve the problems related to the removal of the products for which the errors occurred, and then reattempt to remove the Hitachi Command Suite products.	*Cause* One or more of the Hitachi Command Suite products were not completely removed. *Action* If any errors occurred, resolve the problems related to the removal of the products for which the errors occurred, and then reattempt to remove the Hitachi Command Suite products.
KAIB62191-W	*product-name* might not have been properly removed. If removal of the product stopped because of an error or was canceled, stop the removal of all the Hitachi Command Suite products. Do you want to continue with the removal of the Hitachi Command Suite products? Click Yes to continue, or click No to cancel.	*Cause* A Hitachi Command Suite product might not have been properly removed. *Action* If removal of the product stopped because of an error or was canceled, stop the removal of all the Hitachi Command Suite products.
KAIB62192-W	The JDK currently being used by Hitachi Command Suite is not supported after an upgrade. The JDK bundled with Hitachi Command Suite will be used instead. After the upgrade installation is complete, you can change the JDK to another version. Install the JDK you want to use, and then execute the hcmds64chgjdk command and specify the JDK you installed.	*Cause* The JDK currently being used by Hitachi Command Suite is not supported after an upgrade. The JDK bundled with Hitachi Command Suite will be used instead. *Action* After the upgrade installation is complete, you can change the JDK to another version. Install the JDK you want to use, and then execute the `hcmds64chgjdk` command and specify the JDK you installed.
KAIB64000-E	Administrator privileges are required to perform an installation.	*Cause* Administrator privileges are required to perform an installation. *Action* Perform the installation as a user who has administrator privileges.

Message ID	Message Text	Description
KAIB64001-E	Administrator privileges are required to remove the products.	*Cause* Administrator privileges are required to remove the products. *Action* Perform the removal as a user who has administrator privileges.
KAIB64002-E	A file required for the installation (*file-name*) cannot be read. The following are possible causes: - The file failed to be copied from the integrated installation media to a Windows drive. - The file copied to the Windows drive was deleted. - The name of the destination folder contains characters other than single-byte alphanumeric characters. If the problem persists, detailed investigation is required to determine the cause and resolve the problem. Contact the support center, who may ask you to collect troubleshooting information.	*Cause* A file required for the installation cannot be read. The following are possible causes: • The file failed to be copied from the integrated installation media to a Windows drive. • The file copied to the Windows drive was deleted. • The name of the destination folder contains characters other than single-byte alphanumeric characters. *Action* Determine the cause of the problem, and then resolve it accordingly. If the problem persists, detailed investigation is required to determine the cause and resolve the problem. Contact the support center, who may ask you to collect troubleshooting information.
KAIB64003-E	This OS does not support the Hitachi Command Suite all-in-one installer. Verify which OSs support the Hitachi Command Suite all-in-one installer. System OS version: *os-name*	*Cause* This OS does not support the Hitachi Command Suite all-in-one installer. *Action* Verify which OSs support the Hitachi Command Suite all-in-one installer.
KAIB64004-E	Hitachi Command Suite cannot be installed in Server Core environments.	*Cause* Server Core environments are not supported. *Action* Verify the Hitachi Command Suite product environments that are supported.
KAIB64005-E	Inconsistencies were detected in the information about the following installed products: *product-name* Detailed investigation is required to determine the	*Cause* Inconsistencies were detected in the information about the installed products. *Action*

Verify that Prerequisite Checker supports the operating system and architecture.	*Cause* Prerequisite Checker cannot run in this operating system or architecture. *Action* Verify that Prerequisite Checker supports the operating system and architecture.
KAIB66603-E	Prerequisite Checker is version *OS*. Verify that the installation media and Prerequisite Checker can be used on the operating system.	*Cause* Prerequisite Checker cannot be used on the operating system. *Action* Verify that the installation media and Prerequisite Checker can be used on the operating system.
KAIB66604-E	File "*file-name*", required for the requirements check, cannot be read. Causes include: - The files on the installation media are insufficient, or you do not have the necessary permission. - The name of the mount point includes a character other than one-byte alphanumeric characters or "_". If the problem persists, detailed investigation is required to determine the cause and resolve the problem. Contact customer support, who might ask you to collect troubleshooting information.	*Cause* A file required for the requirements check cannot be read. Causes include: • The files on the installation media are insufficient, or you do not have the necessary permission. • The name of the mount point includes a character other than one-byte alphanumeric characters or "_". *Action* If the problem persists, detailed investigation is required to determine the cause and resolve the problem. Contact customer support, who might ask you to collect troubleshooting information.
KAIB66605-E	Unable to read file "*file-name*". Detailed investigation is required to determine the cause and resolve the problem. Contact customer support, who might ask you to collect troubleshooting information.	*Cause* The file cannot be read. *Action* Detailed investigation is required to determine the cause and resolve the problem. Contact customer support, who might ask you to collect troubleshooting information.
KAIB66606-E	Prerequisite Checker cannot start because there is insufficient disk space.	*Cause* There is insufficient disk space to start the installer. *Action*

Message ID	Message Text	Description
	Disk: *disk*, required: *required-disk-space* MB, available: *available-disk-space* MB	Verify that the required disk space is available.
KAIB66607-E	The mount path contains an invalid character. Valid characters are: A-Z a-z 0-9 _ /	*Cause* The mount path contains an invalid character. *Action* Valid characters are: A-Z a-z 0-9 _ /
KAIB66700-E	The following kernel parameters are smaller than the minimum values. The calculation of the minimum values uses the recommended values for the selected products and for the installed products. *setting-Information* *action*	*Cause* The kernel parameters are smaller than the minimum values. *Action* For information about kernel parameter values, see the Hitachi Command Suite System Requirements.
KAIB66701-E	The following shell limits are smaller than the minimum values. The calculation of the minimum values uses the recommended values for the selected products and for the installed products. *setting-Information* *action*	*Cause* The shell limits are smaller than the minimum values. *Action* For information about shell limits, see the Hitachi Command Suite System Requirements.

Messages with IDs beginning with KAIC

This section describes messages related to Device Manager.

KAIC00000 - KAIC09999

The following table describes messages KAIC00000 to KAIC09999, which are related to the Device Manager server. Unless stated otherwise, *server* refers to the Hitachi Command Suite management server. For messages with the sentence "Call server administrator." in the message text or in the description, contact the Hitachi Command Suite storage administrator.

If a message that contains "ErrorCode=*xxxx*" (*xxxx* is a four-digit number) is output, refer to Chapter 4, Error codes for the Device Manager agent on page 4-1, and then take the appropriate action according to the description of the error code *xxxx*.

Table 2-9 KAIC00000 - KAIC09999 (messages related to Device Manager server)

Message ID	Message Text	Description
KAIC00000-E	An unspecified error was encountered.	Contact the Support Center.
KAIC00001-E	An unspecified server error was encountered.	Contact the Support Center.
KAIC00002-E	An error occurred in initializing the Device Manager Server.	See the server "`error.log`" for additional details.
KAIC00003-E	The servlet instance is invalid.	A request referenced a servlet not supported by Device Manager.
KAIC00004-E	The transfer request format is incorrect.	The transfer request format is invalid; correct the format, and then retry.
KAIC00100-E	Server initialization error: an invalid HTTP port number "*port-number*" has been specified.	Check the Device Manager Server manual, confirm the value of "`server.properties`", and restart the Device Manager Server.
KAIC00101-E	Server initialization error: an invalid HTTPS port number "*port-number*" has been specified.	Check the Device Manager Server manual, confirm the value of "`server.properties`", and restart the Device Manager Server.
KAIC00102-E	Server initialization error: an invalid document root directory "*directory-name*" has been specified.	Check the Device Manager Server manual, confirm the value of "`server.properties`", and restart the Device Manager Server.
KAIC00103-E	Server initialization error: an invalid bind address "*bind-address*" has been specified.	Check the Device Manager Server manual, confirm the value of "`server.properties`", and restart the Device Manager Server.
KAIC00104-E	Server initialization error: an unsupported JRE version "*JRE-version*" has been specified.	Make sure the version is JRE version, and restart Device Manager Server.
KAIC00105-E	Server initialization error: Unable to load Servlet v2.2 classes.	Make sure the servlet (JSDK v2.2+) can be loaded.
KAIC00106-E	Server initialization error: Unable to load SNMP classes.	Make sure the Sun SNMP (JDMK) classes can be loaded and restart the Device Manager Server.
KAIC00107-E	Server initialization error: An attempt to load Service Modules has failed.	The direct cause of this error is the immediately preceding error. Carry out the recommended action for that error. If this error continues to occur even after

Message ID	Message Text	Description
		performing the action, or if these actions are inapplicable, contact the Support Center.
KAIC00108-E	Server initialization error: An error occurred while the entry "*entry-name*" was loaded in the Device Manager Server KeyStore.	Contact the Support Center.
KAIC00110-E	An attempt to start Server failed: Serious errors occurred checking or updating the database.	Contact the Support Center.
KAIC00112-E	The maximum number of connection threads, "*number-specified-for-maxThreads*", was exceeded.	Check the Device Manager Server manual, confirm the value of "`server.properties`", and restart the Device Manager Server.
KAIC00113-E	An attempt to construct ServiceConnection failed.	Contact the Support Center.
KAIC00114-E	An attempt to start the HTTP server on port "*port-number*" failed.	Check "`server.http.port`" in "`server.properties`".
KAIC00115-E	An attempt to start the HTTPS server on port "*port-number*" failed.	Check "`server.https.port`" in "`server.properties`".
KAIC00116-E	Server initialization error: The IP address of localhost is unsolvable.	Contact the Support Center.
KAIC00120-E	The config file "server.properties" cannot be read.	Check "`server.properties`", and restart the Device Manager Server.
KAIC00121-E	Unable to read servlet config file "servlet.properties".	Check "`servlet.properties`", and restart the Device Manager Server.
KAIC00123-E	The MIME types file cannot be read.	Check "`mime.properties`", and restart the Device Manager Server.
KAIC00124-E	During an attempt to change the user, group or root directory, and error occurred with the message "*error-message*".	Contact the Support Center.
KAIC00125-E	An attempt to read the configuration file "product.properties" has failed.	Check the configuration file "`product.properties`", and then restart the Device Manager Server.
KAIC00126-E	An attempt to read the configuration file "*file-name*" has failed. Error detail : "*error-details*".	Remove the cause of the error, and then restart the Device Manager Server. If this error continues to occur even after performing the action, contact the Support Center.

Message ID	Message Text	Description
KAIC00150-E	An attempt to find the entry "*entry-name*" in the Device Manager Server KeyStore has failed.	The Device Manager Server KeyStore must be present and contain at least one entry to run the Device Manager Server in secure mode.
KAIC00180-E	Common Component is not installed.	Contact the Support Center.
KAIC00181-E	An attempt to set the installation destination of Common Component has failed.	Check "`server.base.home`" in "`server.properties`", and contact the Support Center.
KAIC00182-E	An attempt to acquire the Common Component address has failed. ("*method-name*")	Contact the Support Center.
KAIC00183-E	An error occurred in initializing the Provisioning Manager. ("*method-name*")	Contact the Support Center.
KAIC00184-E	A directory necessary for storage system management does not exist. The Device Manager environment is invalid. (directory name = *directory-name*)	Contact the Support Center.
KAIC00200-E	Server initialization error: an invalid RMI port number "*port-number*" has been specified.	Check the Device Manager Server manual, confirm the value of "`server.properties`", and restart the Device Manager Server.
KAIC00300-E	An attempt to bind the port "*port-number*" for receiving the SNMP Trap has failed. This port is being used by other software.	Terminate any other software using this port, or set '`false`' for "`server.dispatcher.daemon.receiveTrap`" in the "`dispatcher.properties`" file, and restart Device Manager Server.
KAIC00350-E	The operation type is not specified.	Revise the entered command, and then try again.
KAIC00351-E	The operation type is invalid. The value that can be specified is one of *valid-values-list*.	Revise the entered command, and then try again.
KAIC00352-E	"*parameter-name*" is not specified.	Revise the entered command, and then try again.
KAIC00353-E	The value of "*parameter-name*" is invalid. The value that can be specified is one of *valid-values-list*.	Revise the entered command, and then try again.
KAIC00354-E	The length of the value of "*parameter-name*" is invalid. The value must have a length from	Revise the entered command, and then try again.

Message ID	Message Text	Description
	valid-minimum-length to *valid-maximum-length*.	
KAIC00355-E	The value of "*parameter-name*" includes one or more invalid characters, or a space exists as the first or last character of the value. Specifiable characters are alphanumeric characters (A-Z, a-z, 0-9), spaces, and the following characters: *specifiable-symbol-charcters*	Revise the entered command, and then try again.
KAIC00356-E	When the value of --security_level is "*security-level*", specify *need-parameter-name-list*.	Revise the entered command, and then try again.
KAIC00357-E	When the value of --encrypt_protocol is changed, change the value of --encrypt_key.	Revise the entered command, and then try again.
KAIC00358-E	The user that is specified for receiving SNMP traps, (*user-name-for-receive-SNMP-Trap*), is not registered.	Revise the entered command, and then try again.
KAIC00359-E	The user that is specified for receiving SNMP traps, (*user-name-for-receive-SNMP-Trap*), is already registered.	Revise the entered command, and then try again.
KAIC00360-E	The configuration file (*file-name*) cannot be read.	Check the configuration file indicated in the message.
KAIC00361-E	When the Device Manager server was receiving notification about an update to a user account (so that the user could receive SNMP traps), an error occurred.	Verify the following: • The local host name can be correctly resolved. • The Device Manager server is running.
KAIC00362-E	The request is invalid.	To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC00363-E	A response to the processing to apply a user for receiving SNMP traps cannot be created.	If this problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC00364-E	Because no settings for receiving SNMP traps have been specified, information could not be applied	In the `dispatcher.properties` file, set "`true`" for `server.dispatcher.daemon.rec`

Message ID	Message Text	Description
	to the Device Manager server. The information is related to the users who have been identified to receive SNMP traps.	eiveTrap, and then restart the Device Manager server. Confirm that the information about users who are to receive SNMP traps has been applied: Send a test SNMP trap from the storage system.
KAIC00370-E	The specified user account was successfully updated to receive SNMP traps. However, the update was not applied to the Device Manager server.	Resolve the issue according to the displayed error message and the information in this message. Then, restart the Device Manager server and confirm that the information about users who are to receive SNMP traps has been applied: Send a test SNMP trap from the storage system.
KAIC00405-E	An unexpected error occurred in the email notification functionality.	Contact the Support Center.
KAIC00407-E	An email send error occurred. (unsent email = (recipient email address = "*recipient-email-address*"), Alert = (messageID = "*alert-ID*", number = "*number*", type = "*type*", source = "*source*", severity = "*severity*", component = "*component*", description = "*description*", actionToTake = "*action-to-take*", data = "*data*", timeOfAlert = "*time-of-alert*"))	Make sure the following environment related items are correct: • Status and settings of the SMTP server • Status of the network
KAIC00408-E	An attempt to connect to the SMTP server has failed. (SMTP server = (host = "*hostname-or-IP-address*", port = "*port-number*"), unsent email = (recipient email address = "*recipient-email-address*"), Alert = (messageID = "*alert-ID*", number = "*number*", type = "*type*", source = "*source*", severity = "*severity*", component = "*component*", description = "*description*", actionToTake = "*action-to-take*", data = "*data*", timeOfAlert = "*time-of-alert*"))	Make sure the following items related to the environment and the sending of email are correct: • Property settings for sending email • Status and settings of the SMTP server • Status of the network
KAIC00409-E	A connection to the SMTP server could not be established because authentication failed. (SMTP server = (host = "*hostname-or-IP-address*", port = "*port-number*"), unsent email = (recipient email address = "*recipient-email-address*"), Alert = (messageID = "*alert-ID*",	Change the SMTP server settings so that the relevant user can be authenticated. Also, use the command for setting the SMTP authentication user information to set the SMTP authentication user information (user ID and password).

Message ID	Message Text	Description
	number = "*number*", type = "*type*", source = "*source*", severity = "*severity*", component = "*component*", description = "*description*", actionToTake = "*action-to-take*", data = "*data*", timeOfAlert = "*time-of-alert*"))	
KAIC00410-E	The value specified for a property is incorrect. The system will use the default value for the property. (file name = "*file-name*", property name = "*property-name*", specified value = "*specified-value*", default value = "*default-value*")	If the default value does not cause any problems, no further action is required. If you specify a value different from the default value, make sure that the property settings are correct, and then restart the Device Manager server.
KAIC00411-E	Authentication information for connecting to the SMTP server has not been set. The email will be sent without SMTP authentication.	Set the SMTP authentication user information (user ID and password) by using the `hdvmmodmailuser` command. If SMTP authentication is not required for the email, no further action is required.
KAIC00412-E	The recipient email address is invalid. (user ID = "*user-ID*", recipient email address = "*recipient-email-address*") The email will not be sent to this user ID.	Specify a valid address by using the user management functionality's **Edit Profile** dialog box.
KAIC00413-E	The template file was not found. (template file path name = "*template-file-path-name*") The default template file will be used to send the email.	Check whether the template file indicated in the message exists. If you use the default template file, no further action is required.
KAIC00414-E	An error occurred while the template file was being loaded. (template file path name = "*template-file-path-name*", detailed information = "*detailed-information*") The default template file will be used to send the email.	Remove the cause of the error according to the detailed information. If you use the default template file, no further action is required.
KAIC00415-E	The size of the template file is too large. (template file name = "*template-file-name*", template file size (bytes) = "*template-file-size-in-bytes*", maximum file size (bytes) = "*maximum-file-size-in-bytes*") The default template file will be used to send the email.	Revise the contents of the template file, and reduce the file size. If you use the default template file, no further action is required.
KAIC00416-E	An invalid header exists. (template file name = "*template-file-name*", line number = "*line-number*", header name =	Revise the characters used in the header name specified in the template file. If you use the

Message ID	Message Text	Description
	"*header-name*") The default template file will be used to send the email.	default template file, no further action is required.
KAIC00417-E	A header has not been specified. (template file name = "*template-file-name*", header name = "*header-name*") The default template file will be used to send the email.	Revise the headers specified in the template file. If you use the default template file, no further action is required.
KAIC00418-E	The same header name is duplicated. (template file name = "*template-file-name*", line number = "*line-number*", header name = "*header-name*") The default template file will be used to send the email.	Revise the headers specified in the template file. If you use the default template file, no further action is required.
KAIC00419-E	The header section in the template file contains an invalid line. The name and contents of a header must be separated with a colon (:). (template file name = "*template-file-name*", line number = "*line-number*") The default template file will be used to send the email.	Revise the headers specified in the template file. If you use the default template file, no further action is required.
KAIC00420-E	In the template file, the size of a line is too large. (template file name = "*template-file-name*", line number = "*line-number*", detected line size (bytes) = "*detected-line-size-in-bytes*", maximum line size (bytes) = "*maximum-line-size-in-bytes*") The default template file will be used to send the email.	Revise the contents of the template file to reduce the line size. If the default template file is used, no action is required.
KAIC00422-E	The user ID entered for SMTP authentication is invalid.	Enter a valid user ID for SMTP authentication, using from 1 to 64 characters. Specifiable characters for an SMTP authentication user ID are as follows: A to Z, a to z, 0 to 9, and the following characters: - _ . , @ ! # $ % & ' * + = ? ^ |
KAIC00423-E	The password entered for SMTP authentication is invalid.	When specifying a password for SMTP authentication, enter a valid password using from 0 to 64 characters. Specifiable characters for the SMTP authentication password are as follows: A to Z, a to z, 0 to 9, and the following characters:

Message ID	Message Text	Description
		- _ . , @ ! # $ % & ' * + = ? ^ | The password can be omitted.
KAIC00424-E	The user ID or password of Device Manager is invalid.	Specify the correct user ID and password.
KAIC00425-E	The entered Device Manager user does not have permission to execute the command.	When executing the command, make sure the Device Manager user has the Admin permission.
KAIC00426-E	An internal error occurred.	Contact the Support Center.
KAIC00427-E	The command syntax is invalid.	Revise the command syntax.
KAIC00428-E	In the template file, there is no blank line to indicate the end of the header section. (template file name = "*template-file-name*")	Add a blank line at the end of the header section. If the default template file is used, no action is required.
KAIC00500-E	The request contained improperly formatted data.	Correct the request, and then retry.
KAIC00501-E	The device is not supported by Device Manager Server. Explanation = "*storage system*".	Confirm that the IP Address in the request is correct. It is also possible that a configuration error exists in the storage system.
KAIC00504-E	"*specified-name*" is a reserved name and cannot be used as a top-level logical group name.	The CLI or another client has tried to use a reserved group name (e.g., Unallocated). You cannot use the names "Unallocated" or "LUN Scan" for a top-level logical group.
KAIC00505-E	The Device Manager server does not support the specified array family.	Check the array family.
KAIC00506-E	Simultaneous LUN Scans of the storage system are not allowed.	Only one LUN Scan can be performed on a storage system at a time. Make sure that only one Device Manager Server is actively managing the storage system.
KAIC00507-E	The command "*command-name*" is not supported under this API version.	Check the Device Manager Server XML API manual and make sure that the running API version supports the command.
KAIC00508-E	The command "*command*" is not supported for the array family "*family-name*" under this API version.	Check the Device Manager Server XML API manual and make sure that the running API version supports the command.
KAIC00509-E	This Device Manager Server does not support the API version "*version*".	Check the Device Manager Server XML API manual and make sure that the running API version supports the command.
KAIC00510-E	The family of the target storage is not "*storage-family*".	Make sure that the specification is valid.

Message ID	Message Text	Description
KAIC00511-E	The definition of storage name "*storage-name*" is invalid.	Make sure the storage name relations in the config files are valid.
KAIC00512-E	The specified storage system is LUN Security mode. It is not supported in Device Manager.	The configuration of purchasable optional features on the storage system might have changed. Check the storage system.
KAIC00513-E	The servlet name "*xml-servlet-name*" in the request does not match the specified servlet name "*specified-servlet-name*".	Make sure that the servlet name in the request is same as the specified servlet name.
KAIC00514-E	The command "*specified API name*" is not supported by the Device Manager Server.	Check the Device Manager Server XML API manual and make sure that the running API supports the command.
KAIC00515-E	The executed command "*command-name*" does not support the specified array family in this API version.	Find out which API versions support this command.
KAIC00516-E	The Device Manager server does not support the specified array type.	Check the array type.
KAIC00530-E	Device Manager Server does not support the operation by API version "*version*" for this storage system.	Check the Device Manager Server XML API manual and make sure that the running API version supports the command.
KAIC00600-E	An internal server error occurred.	If this problem persists, contact the Support Center.
KAIC00601-E	An invalid parameter of a managed object was detected.	Make sure that the objects are valid.
KAIC00604-E	An attempt to initialize the Common Component Logger has failed.	Make sure that the Common Component is installed.
KAIC00650-E	The database command "*command name*" could not be processed. (argument = "*arguments*", return code = "*return code*", standard output = "*standard output*", standard error = "*standard error*")	To determine the cause and resolve the problem, contact customer support. You may be asked to collect troubleshooting information.
KAIC00651-E	After running the command "*command name*", no response was sent from the database. (argument = "*arguments*", standard output = "*return code*", standard error = "*standard output*") The database might not be running properly.	To determine the cause and resolve the problem, contact customer support. You may be asked to collect troubleshooting information.

Message ID	Message Text	Description
KAIC00652-E	While processing the database command "*command name*", an internal error occurred. (argument = "*arguments*")	To determine the cause and resolve the problem, contact customer support. You may be asked to collect troubleshooting information.
KAIC00653-E	The database cannot be backed up because another database backup or restoration process is running.	Wait a while, and then try again. If the problem continues, collect the error information and contact customer support.
KAIC00654-E	The database cannot be restored because another database backup or restoration process is running.	Wait a while, and then try again. If the problem continues, collect the error information and contact customer support.
KAIC00655-E	Another process is running.	Wait a while, and then try again. If the problem continues, collect the error information and contact customer support.
KAIC00656-E	The property file "*property file name*" is not writable. Verify that you can write to the directory "*property file directory*" and the property file "*property file name*", and then retry the operation. If this problem continues, collect the error information and contact customer support.	Verify that you can write to the directory "*property file directory*" and the property file "*property file name*", and then retry the operation. If this problem continues, collect the error information and contact customer support.
KAIC00657-E	The database backup directory "*directory name*" cannot be created.	Confirm the following: 1. No files or directories have the same name as the database backup directory. 2. No errors occur when writing to the parent directory of the database backup directory. If the problem continues, collect the error information and contact customer support.
KAIC00658-E	The database backup directory "*directory name*" does not exist.	Specify settings by using the VVol Adapter Setup tool.
KAIC00659-E	The directory "*directory name*" for unloading the database log does not exist.	Specify settings by using the VVol Adapter Setup tool.
KAIC00660-E	The command "*command name*" of *PP Name* Common Component cannot be executed. (arguments = *arguments*, return code = *return code*, standard output = *standard output*, standard error = *standard error*)	To determine the cause and resolve the problem, collect troubleshooting information and contact customer support.
KAIC00661-E	No response was sent from *PP Name* Common Component for	To determine the cause and resolve the problem, collect

Message ID	Message Text	Description
	the command "*command name*". (arguments = *arguments*, standard output = *standard output*, standard error = *standard error*)	troubleshooting information and contact customer support.
KAIC00662-E	An error occurred while running the command "*command name*" of *PP Name* Common Component. (arguments = *arguments*)	To determine the cause and resolve the problem, collect troubleshooting information and contact customer support.
KAIC00663-E	The backup file or unload log file cannot be moved. (file name = *file name*, destination directory = *directory name*)	Verify that you can write to the destination directory. After that, retry the operation. If this problem continues, collect the error information and contact customer support.
KAIC00664-E	The database has been blocked. To determine the cause and resolve the problem, collect troubleshooting information and contact customer support.	To determine the cause and resolve the problem, collect troubleshooting information and contact customer support.
KAIC00665-E	Another VVol Adapter Setup tool is running. Exiting...	Verify another VVol Adapter Setup tool is not running, and then try again. If this problem continues, collect the error information and contact customer support.
KAIC00666-E	The specified backup file name "*backup file absolute path*" is invalid. The backup file name must be specified as an absolute path. Change the specified command, and then try again.	Change the specified command, and then try again.
KAIC00667-E	The specified file (or directory) "*backup file absolute path*" is invalid. Use the following characters and specify an absolute path that consists of 136 or fewer characters: "*following characters*"	Use the following characters and specify an absolute path that consists of 136 or fewer characters: "*following characters*"
KAIC00668-E	The specified backup file "*backup file absolute path*" cannot be created because it cannot be written to the directory, or it already exists in the directory. 	"*error code from Storage Navigator Modular Server*", error message = "*error message for Storage Navigator Modular error code*")	
KAIC05000-E	An unspecified transport error was encountered.	Contact the Support Center.
KAIC05001-E	Device Manager does not support the operation "*operation*" for the storage system type.	Device Manager Server does not support requests on the specified storage system.
KAIC05002-E	An internal server error occurred. The transport connection is not valid for the storage system.	Contact the Support Center.
KAIC05003-E	The storage system is currently locked by "*user-name*".	The storage system is locked by another management application. Check whether anyone is accessing the storage system from another management application on the network. If this problem persists, contact the Support Center.
KAIC05004-E	An attempt to acquire the lock for the storage system has failed.	Check whether anyone is accessing the storage system from another management application on the network. If this problem persists, contact the Support Center.
KAIC05005-E	An attempt to release the SNMP lock has failed after "*number-of-trials*" attempts.	Check whether anyone is accessing the storage system from another management application on the network. If this problem persists, contact the Support Center.
KAIC05006-E	The specified pair no longer exists in the specified storage system. Refresh the storage system information, and check the latest information.	Refresh the storage system information, and check the latest information.
KAIC05008-E	An SNMP error occurred during an internal refresh of the storage system.	If this problem persists, contact the Support Center.
KAIC05009-E	An attempt to retrieve info via SNMP has failed.	If this problem persists, contact the Support Center.
KAIC05010-E	The specified external volume "*external volume ID*" is not available.	Check the state of the external volume.
KAIC05011-E	An internal server error occurred. DeviceIdentificationService was not found.	Contact the Support Center.

Message ID	Message Text	Description
KAIC05012-E	No default service is registered for identification of the array family "*array-family*".	This is an internal server error indicating an invalid configuration in the transport layer. Contact the Support Center.
KAIC05013-E	An error occurred during acquisition of configuration information from the device at IP Address "*IP-address*".	An error was encountered during polling for device configuration information. Check the storage system for possible problems. If this problem persists, contact the Support Center.
KAIC05014-E	Device Manager does not support the specified operation "*operation*" on the storage system. The minimum microcode version is "*version*".	To perform this operation, the microcode version must be updated.
KAIC05015-E	The specified array group "*array-group*" is out of range.	Perform a refresh on the storage system.
KAIC05016-E	The specified array group "*array-group*" already exists.	Perform a refresh on the storage system.
KAIC05018-E	The specified PDEV "*PDEV-ID*" is already in use.	Perform a refresh on the storage system.
KAIC05019-E	The specified LDEV "*device-number*" is out of range.	Perform a refresh on the storage system.
KAIC05020-E	The specified LDEV "*device-number*" already exists.	Perform a refresh on the storage system.
KAIC05022-E	The specified host mode is invalid for the storage system. The setting for the storage system type does not match the actual value.	Specifying the correct model, add the storage system again. If there is a serious impact on your system, contact the Support Center.
KAIC05023-E	The specified host mode is unsupported on the storage system.	Check that the storage system supports this host mode.
KAIC05024-E	The function "*Function-name*" on the storage system does not exist.	Check the storage system functionality.
KAIC05026-E	Device Manager does not support the specified storage system, or a configuration error might exist in the storage system.	Revise the storage system specifications. If there is no problem in the specifications, contact the Support Center.
KAIC05027-E	The number of devNums required to create the specified LU in the current configuration do not exist.	Delete any unnecessary LUs, and then retry.
KAIC05028-E	The *PP Name(Dynamic Provisioning)* ArrayGroup has been specified. A *PP Name(Dynamic Provisioning)*	Revise the ArrayGroup specification.

Message ID	Message Text	Description
	volume cannot be created in Device Manager.	
KAIC05029-E	Current configuration does not have enough IDs to create the specified host group or iSCSI target.	Delete any unnecessary host groups and iSCSI targets, and then retry the operation.
KAIC05030-E	Cannot create the LDEV with the specified emulation type under present storage configuration.	Delete any unnecessary LUs, and then retry.
KAIC05031-E	The specified emulation type is invalid for the array group.	Correct the specified emulation type and/or array group, and then retry.
KAIC05032-E	An LDEV cannot be created for an array group of the emulation type "*emulation-type*".	Check the specified emulation type.
KAIC05034-E	The storage system type is invalid.	Revise the specified storage system type.
KAIC05035-E	An LDEV that has the emulation type "*emulation-type*" cannot be created for the specified device number (devNum="*device-number*").	Revise the specified devNum or emulation type.
KAIC05036-E	The specified device number (devNum="*device-number*") cannot be used.	Revise the specified devNum.
KAIC05037-E	Storage system information is inconsistent between Device Manager and the storage system. Refresh the storage system. If you are a local user, contact the system administrator. If the problem continues, the LDEV with the specified device number (devNum = "*device-number*") may be disabled in the storage system. Revise the devNum specification and retry.	Device Manager server may not contain updated storage system information. Refresh the information and retry. If the problem continues, the LDEV with the specified device number may be disabled in the storage system. Enable the LDEV, refresh the information, and retry.
KAIC05040-E	Operations for command device security are not supported on the microcode version of this storage system.	To perform command device security operations, you will need to upgrade. Contact the Support Center.
KAIC05041-E	The specified SMI-S Enabled storage system was not found.	Revise the specification of the SMI-S Enabled storage system.
KAIC05042-E	An SMI-S Enabled storage system was not found. The specified SMI-S provider does not manage any SMI-S Enabled storage systems supported by Device Manager.	Revise the SMI-S provider specification.

Message ID	Message Text	Description
KAIC05043-E	The specified virtualization-server management program or virtualization server was not found.	Revise the specification for the virtualization-server management program or virtualization server.
KAIC05045-E	The information acquired from the specified virtualization server does not match the information in the database.	Delete the virtualization server from the Device Manager server, and then re-register the virtualization server information.
KAIC05050-E	Unable to set a CLPR number because another process is assigning one. Wait several minutes and retry.	Wait several minutes and retry. If this issue persists, use Element Manager or Storage Navigator to check the CLPR status.
KAIC05051-E	Setting a CLPR number could not be completed. Wait several minutes and use Element Manager or Storage Navigator to check the CLPR status.	Wait several minutes and use Element Manager or Storage Navigator to check the CLPR status.
KAIC05054-E	The parameter (IP address or communication protocol) used to connect to the storage system has been changed in Storage Navigator Modular 2. Make sure the IP address and communication protocol are correct, and then refresh the storage system.	The IP address and communication protocol used to connect to the storage system must be the same as those set in Storage Navigator Modular 2. Check the network environment and the IP address and communication protocol used to connect to the storage system. If necessary, specify the correct IP address or communication protocol, and then refresh the storage system to obtain the most up-to-date configuration information.
KAIC05056-E	An attempt to connect to the storage system failed. Check the specified storage system type, IP address, microcode version, and network port settings, as well as the network status.	Check the following items related to the storage system: • Type • IP address • Microcode version • The ports that will be used. (Check from both Device Manager and the storage system.) • The network status If there is no problem with any of the above items, there is a hardware problem with the network or the storage system.
KAIC05057-E	An attempt to connect to the storage system failed. Check the specified storage system type, IP address, communication protocol, microcode version, and network	Check the following items related to the storage system: • Type • IP address

	check the network connection. (IP address = *IP address*, Port number = *port number*)	Administrator Guide" and make sure that the RMI communication environment is configured correctly. If this problem persists, detailed investigation is required to determine the cause and resolve the problem. Contact the support center, who may ask you to collect troubleshooting information.
KAIC05603-E	The specified storage system is not registered on the storage management server. (IP address = *IP address*, serial number = *serial number*)	Register the storage system on the storage management server.
KAIC05607-E	The storage system at "*IP-address*" is currently locked by another user, or is undergoing reconfiguration.	The storage system is locked by another management application. Wait a while, and then retry. If no management applications for the storage system are being locked, forcibly unlock the storage system by using Storage Navigator or a maintenance utility. If the problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC05608-E	The operation cannot be performed on the specified storage system because an attempt to link with Storage Navigator Modular 2 failed. (The cause of the failure is as follows: Storage Navigator Modular 2 might have been uninstalled while Device Manager was running.) Restart the Device Manager server. After you restart the Device Manager server, the link between Device Manager and Storage Navigator Modular 2 will automatically be canceled.	Restart the Device Manager server. After you restart the Device Manager server, the link between Device Manager and Storage Navigator Modular 2 will automatically be canceled. If this problem persists, detailed investigation is required to determine the cause and resolve the problem. Contact customer support, who might ask you to collect troubleshooting information.
KAIC05609-E	A RMI Session problem occurred at "*IP-address*".	This indicates a network or storage problem.
KAIC05610-E	Unable to communicate with the Storage Navigator or Remote Web Console.(URL = "*Access URL*")	Revise the permissions of the user accounts for Storage Navigator or Remote Web Console that were specified when a storage system was added. If the problem persists, to

Message ID	Message Text	Description
		determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC05611-E	An attempt to acquire system task information from the Storage Navigator or Remote Web Console has failed. (URL:"*Access URL*", HTTP response code = "*HTTP response code*")	If the problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC05612-E	An attempt to acquire system task information from the Storage Navigator or Remote Web Console has failed. (URL:"*Access URL*", status = "*EchoCommandStatus*", result="*EchoCommandResult*")	If the problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC05613-E	An attempt to offset the time failed.(storage system name = "*Storage system-name*")	Refresh the storage system. If the problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC05670-E	Cannot perform this operation, another function unsupported by Device Manager is using the specified resource. (function = *function*, resource type = *resource-type*, resource ID = *resource-ID*)	Remove the resource from the function displayed in the message, revise the specified resource, and then retry the operation.
KAIC05671-E	The operation is not possible because the specified resource belongs to a resource group used for data migration that uses virtual IDs. (resource type = *resource-type*, resource ID = *resource-ID*)	Revise the specified resource, or remove the resource from the resource group, and then try again.
KAIC05672-E	The operation is not possible because the specified resource belongs to a resource group used for data migration that uses virtual IDs, and the resource group has volumes in the process of data migration that uses virtual IDs. (resource type = *resource-type*, resource ID = *resource-ID*)	Revise the specified resource, or finish the data migration, and then try again.

Message ID	Message Text	Description
KAIC05673-E	The operation is not possible because the specified volume "*device-number*" is in the process of data migration that uses virtual IDs.	Revise the specified volume, or finish the data migration, and then try again.
KAIC05674-E	The operation is not possible because the specified parity group "*parity-group-number*" is mapped to data migration that uses virtual IDs.	Revise the specified parity group, and then try again.
KAIC05675-E	The operation with the specified pool is not possible because a volume (devNum = "*device-number*") that belongs to a resource group used for data migration that uses virtual IDs, is used as a pool volume.	Revise the specified pool, or remove the pool volume from the resource group, and then try again.
KAIC05676-E	The operation with the specified journal group is not possible because a volume (devNum = "*device-number*") that belongs to a resource group used for data migration that uses virtual IDs, is used as a journal volume.	Revise the specified journal group, or remove the journal volume from the resource group, and then try again.
KAIC05677-E	The operation is not possible because a resource group (*resource group ID*) used for data migration that uses virtual IDs contains volumes in the process of data migration.	Revise the specified resources or finish the data migration that uses virtual IDs, and then try again.
KAIC05678-E	The specified volume (device number=*Device number*) cannot be moved to another virtual storage machine because the volume is a pair volumes of *PP name (Global Active-Device)*.	Revise the specified volume or delete the pair, and then try again.
KAIC05679-E	The operation is not possible because the specified volume "*device-number*" is in the process of data migration that uses virtual IDs. The data migration might already be finished, or the specified volume might be incorrect. Revise the specified volume, and then try again.	Revise the specified volume, and then try again.
KAIC05700-E	Not enough free space exists.	Specify the size within the scope of free space available.
KAIC05701-E	An internal server error occurred. The HostStorageDomainID is invalid.	Contact the Support Center.

Message ID	Message Text	Description
KAIC05702-E	The specified port already has the maximum number of LUNs.	No more LUNs can be specified on this port, so select a different port to which to add LUNs.
KAIC05703-E	The HostStorageDomain specified already has the maximum number of LUNs.	No more LUNs can be specified on this HostStorageDomain. Select a different HostStorageDomain to which to add LUNs.
KAIC05704-E	The LDEV of is a *PP Name (VolumeMigration)* reserved volume; it cannot be used in a LUSE.	Perform a refresh on the storage system and check the request.
KAIC05705-E	The LU is an OnDemand device and cannot be used for an LUN.	Perform a refresh on the storage system and check the request.
KAIC05706-E	The specified LDEV does not exist.	Perform a refresh on the storage system to obtain the latest configuration information.
KAIC05707-E	The specified WWN does not exist.	Perform a refresh on the storage system to obtain the latest configuration information.
KAIC05708-E	The specified port already has the maximum number of WWNs.	Check the request.
KAIC05709-E	The specified HostStorageDomain already has the maximum number of WWNs.	Check the request.
KAIC05710-E	The specified WWN already exists.	Perform a refresh on the storage system to obtain the latest configuration information, and check the specified WWN.
KAIC05711-E	The control unit for devNum cannot be used.	An attempt to add a logical unit has failed. The cu number is not valid. Perform a refresh on the storage system to obtain the latest configuration information.
KAIC05712-E	LDEV cannot be created because the SSID is not set.	You need to set an appropriate SSID from SVP. Contact the storage system administrator, or call maintenance personnel.
KAIC05713-E	The specified capacity is invalid.	Specify a valid capacity, and then retry.
KAIC05714-E	The setting value of the security option of storage system has changed. A refresh of the storage system is recommended. Contact your system administrator if you are a local user.	The Device Manager Server may not contain the most current storage system information. Perform a refresh on the storage system.
KAIC05715-E	This API version does not support the LUN Management option.	Check this storage system's option list. Alternatively, check

Message ID	Message Text	Description
		the Device Manager Server XML API manual and make sure the running API version supports the command.
KAIC05716-E	The port must be Fibre Channel or FCoE.	Specify a Fibre Channel or FCoE port.
KAIC05717-E	The request cannot be processed because the security switch of the specified port is turned off.	Turn on the security switch of the port, and then retry.
KAIC05718-E	The host storage domain must be associated with a Fibre Channel or FCoE port.	Specify a host storage domain that belongs to a Fibre Channel or FCoE port.
KAIC05719-E	The request cannot be processed because the security switch of the port that the specified HostStorageDomain belongs to is turned off.	Turn on the security switch of the port that the specified HostStorageDomain belongs to, and then retry.
KAIC05720-E	The specified HostStorageDomain "*HSD-identifier*" already exists on the port "*port-identifier*".	Check the combination of the specified HostStorageDomain and port ID.
KAIC05721-E	The storage system information in Device Manager server is not the same as the information in the storage system. Refresh the storage system information. If you do not have the permissions required to refresh the information, ask the storage system administrator to do it for you.	Device Manager server might not be using the most up-to-date storage system information. Refresh the storage system information, and then retry the operation.
KAIC05722-E	This operation to the storage system has failed. Some of the operation may have been applied to the storage system. A refresh of the storage system is recommended. Contact your system administrator if you are a local user.	Perform a refresh on the storage system. If this problem persists, contact the Support Center.
KAIC05723-E	The LUN "*LUN-of-a-path*" was not found on the storage system.	Check the LUN.
KAIC05724-E	The SCSI ID "*SCSI-ID-of-a-path*" was not found on the storage system.	Check the SCSI ID.
KAIC05725-E	The LUN "*LUN-of-a-path*" is already used on the storage system.	Check the LUN.
KAIC05726-E	The port "*port-identifier*" was not found on the storage system.	Check the Port.

Message ID	Message Text	Description
KAIC05727-E	The HostStorageDomain "*HSD-identifier*" does not exist on the port "*port-identifier*".	Check the HostStorageDomain.
KAIC05728-E	PDEV #"*PDEV-ID*" is not a spare drive.	Check the PDEV.
KAIC05729-E	The specification of nickname "*nickname*" is invalid. The maximum length of the nickname is "*maximum-length-of-nickname*" bytes.	Check the specified nickname. Make sure that the nickname is correct, and then retry.
KAIC05730-E	An attempt to log in to the storage system has failed. Password authentication is required. Specify the user ID and password, and then try again.	Specify the user ID and password, and then try again. If this problem continues to occur, contact the Support Center.
KAIC05731-E	A LUSE Volume configuration is not supported when the devNum is specified with emulation type "*emulation-type*" and a capacity of "*capacity*KB". Specify the creation capacity within the range from "*min-ldev-size*KB" to "*max-ldev-size*KB".	Make sure that the capacity falls within the valid range for the emulation type.
KAIC05732-E	An attempt to change portRole has failed.	Confirm the state of the port, and then try again.
KAIC05735-E	An inconsistency was detected in the "*type of information*" information. Refreshing the storage system is recommended. If you are a local user, contact your system administrator.	The Device Manager Server might not contain the most current storage system information. Refresh the storage system, and then try again.
KAIC05736-E	An LU cannot be created. The number of LUs that can be created using the specified parameter is *maximum number of LUs*.	Make sure that there is sufficient free space at the target, or revise the LU capacity and count. For details, see the manual that corresponds to your storage system.
KAIC05737-E	An error occurred while deleting an LU. (successfully deleted device(s): *device number list*)	Revise the devNum (device number) value, and then try again.
KAIC05740-E	This operation cannot be performed because the storage system has not been refreshed.	Refresh the storage system. If this error continues, contact Support.
KAIC05741-E	The specified drive type (*Drive type*) and form factor (*Form factor*) combination is not valid.	Revise the drive type and form factor specifications.
KAIC05742-E	The Full Allocation attribute cannot be modified because the volume (LDEV ID = *LDEV ID (devNum)*) is being formatted.	Use a storage management tool to verify that the formatting has finished, and then try again.

Message ID	Message Text	Description
	Use a storage management tool to verify that the formatting has finished, and then try again.	
KAIC05743-E	The Full Allocation attribute cannot be modified because the volume (LDEV ID = *LDEV ID (devNum)*) is being blocked. Unblock the volume, and then try again.	Unblock the volume, and then try again.
KAIC05744-E	The Full Allocation attribute cannot be modified because the volume (LDEV ID = *LDEV ID (devNum)*) is being shredded. Use a storage management tool to verify that the shredding has finished, and then try again.	Use a storage management tool to verify that the shredding has finished, and then try again.
KAIC05745-E	The Full Allocation attribute cannot be modified because the pool (function = *PP Name*, pool ID = *poolid*) is shrinking. Use a storage management tool to verify that the shrinking has finished, and then try again.	Use a storage management tool to verify that the shrinking has finished, and then try again.
KAIC05746-E	The Full Allocation attribute cannot be modified because the pool (function = *PP Name*, pool ID = *poolid*) is blocked. Unblock the pool, and then try again.	Unblock the pool, and then try again.
KAIC05747-E	The specified request cannot be performed because the pool (function = *PP Name*, pool ID = *poolid*) does not have sufficient free space. Verify that the pool has enough free space, and then try again.	Verify that the pool has enough free space, and then try again.
KAIC05750-E	The devNum cannot be used.	Revise the specification for devNum of the LogicalUnit elements and then try again.
KAIC05751-E	The specified operation cannot be executed because the PDEV of the specified disk capacity "*disk-capacity*" is not supported.	Check and, if necessary, specify a different disk capacity, and then retry the operation.
KAIC05752-E	The specified drive type "*drive-type*" is invalid.	Check and, if necessary, specify a different drive type, and then retry the operation.
KAIC05753-E	An error was detected in the Device Manager agent. (details = *detailed-message*)	To determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.

Message ID	Message Text	Description
KAIC05754-E	An error was detected in the Device Manager agent. (details = *detailed-message*)	Remove the cause of the error, and then refresh the storage system information. If this problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC05760-E	The specified CLPR "*CLPR-number*" does not exist in the storage system.	Revise the CLPR specification.
KAIC05761-E	The specified capacity is invalid.	Revise the LU or LDEV capacity specification.
KAIC05762-E	The specified device number "*device-number*" is not available.	Revise the device number specification.
KAIC05763-E	There are no SSIDs that Device Manager can assign for the LU to be created.	Revise the "`server.properties`" value, and then restart the services.
KAIC05764-E	The LUs cannot be created because their total capacity exceeds the free space in the array group.	Reduce the total capacity of the LUs to be created, and then retry the operation.
KAIC05765-E	The storage system managed by the partitioned storage administrator cannot execute the request.	Revise the storage system settings.
KAIC05766-E	There is no *PP Name (Dynamic Provisioning)* volume group which Device Manager can assign.	Reduce the LUs to be added, and then retry the operation.
KAIC05767-E	There is no CU which Device Manager can assign.	Create the volume to the existing CU.
KAIC05768-E	The pool threshold cannot be modified to the specified value "*threshold*" because it is less than or equal to the pool's usage rate "*pool's usage rate*".	Specify a value that is more than the pool's usage rate, and then retry the operation.
KAIC05769-E	Status in pool (function="*PP Name (Dynamic Provisioning)*" pool ID="*poolID*") is not "Normal", and threshold of pool cannot be modified.	Check the status of specified pool, and then retry the operation.
KAIC05770-E	This API cannot be executed because it has supported it since the microcode version 7.	Check the microcode version of the storage system.
KAIC05771-E	The retention term of the specified LDEV has not expired. The protection attributes of the	Check the specification of the LDEV.

Message ID	Message Text	Description
	specified LDEV cannot be changed.	
KAIC05772-E	Usage rate of pool (function="*PP Name (Dynamic Provisioning)*" pool ID="*poolID*") is more than 95%, and threshold of pool cannot be modified.	Check the usage rate of pool.
KAIC05773-E	The pool cannot be created because the maximum number of pools for "*PP Name (Quick Shadow)*" or "*PP Name (Dynamic Provisioning)*" have been created in the storage system.	Delete any unnecessary pool, and then retry the operation.
KAIC05774-E	Array groups cannot be added because the number of array groups for "*PP Name (Dynamic Provisioning)*", "*PP Name (Quick Shadow)*" and "*PP Name (Universal Volume Manager)*" will exceed the maximum number of array groups in storage system.	Delete any unnecessary array groups for "*PP Name (Dynamic Provisioning)*", "*PP Name (Quick Shadow)*" or "*PP Name (Universal Volume Manager)*", and then retry the operation.
KAIC05775-E	Execution of the request failed. For "*PP Name (Shadow Image)*", the pair status must be Simplex or Split. Check the latest pair status, and then retry the operation.	Check the latest pair status, and then retry the operation.
KAIC05776-E	Execution of the request failed. For "*PP Name (Shadow Image)*", the split operation must have finished. Confirm that the split operation has finished, and then retry the operation.	Confirm that the split operation has finished, and then retry the operation.
KAIC05779-E	An attempt to execute the request failed. The array groups of the source and target volumes do not match in the Device Manager database and the storage system.	Refresh the storage system, and make sure the request is correct.
KAIC05780-E	The specified storage system does not support the host mode "*name-of-host-mode*".	Revise the storage system specifications.
KAIC05781-E	The specified host mode "*name-of-host-mode*" cannot be specified for the microcode version of this storage system.	Check the microcode version of the storage system.
KAIC05782-E	The specified port does not support the channel speed "*channel-speed*".	Revise the storage system specifications.

Message ID	Message Text	Description
KAIC05783-E	The specified storage system does not support the host mode 2 "*name-of-host-mode-2*".	Revise the storage system specifications.
KAIC05784-E	The specified host mode 2 "*name-of-host-mode-2*" cannot be specified for the microcode version of this storage system.	Check the microcode version of the storage system.
KAIC05785-E	The specified storage system does not support the option "*name-of-port-option*".	Revise the storage system specifications.
KAIC05786-E	The specified port option "*name-of-port-option*" is not supported on the microcode version of this storage system.	Check the microcode version of the storage system.
KAIC05787-E	storage system information different from that of the actual machine is registered in Storage Navigator Modular 2. Use Storage Navigator Modular 2 to delete the following storage system information, and then retry the operation. (array name = *array-name-registered-in-Storage-Navigator-Modular-2*)	Use Storage Navigator Modular 2 to delete the storage system information, and then retry the operation.
KAIC05788-E	*PP-Name* functionality must be enabled on the storage system.	Enable *PP-Name* functionality on the storage system.
KAIC05789-E	The specified operation cannot be executed because the usage rate of the pool (poolID="*poolID*", usage= "*pool-usage-rate*") is the pool threshold (*attribute-name*="*attribute-value*") or more.	Revise the configuration so that the pool usage rate is less than the value of *attribute-name*, and then retry the operation.
KAIC05790-E	A pool/journal group cannot be created because the maximum number of *PP Name (Universal Replicator)* pools/journal groups has been created in the storage system.	Delete any unnecessary pools/ journal groups, and then try again.
KAIC05791-E	A journal group cannot be shrunk because its status is not "Initial" or "Stop".	Change the status of the pairs that use the journal group, and then retry the operation.
KAIC05792-E	A journal group cannot be expanded because its status is not "Initial", "Active", or "Stop".	Change the status of the pairs that use the journal group, and then retry the operation.
KAIC05793-E	The specified pool cannot be deleted because its used capacity is not 0GB.	Delete all pairs which use the specified pool.

Message ID	Message Text	Description
KAIC05794-E	The status of all pairs that use the specified pool must be "Simplex".	Change status of pairs which use the pool into "Simplex", and then retry.
KAIC05795-E	SnapShot or TrueCopy Extended Distance functionality must be enabled on the storage system.	Check and, if necessary, revise the storage system functionality.
KAIC05796-E	The LU "*device number*" cannot be used for a pool volume/journal volume because it is set for VMA.	Revise the LU specification, and then try again.
KAIC05798-E	The specified journal group cannot be deleted because its status is not the initial status.	Change the status of the journal group to the initial status, and then retry the operation.
KAIC05799-E	An internal server error occurred. An attempt to execute the transport service failed because the parameter "*parameter*" or "*parameter*" is missing.	Contact the Support Center.
KAIC05800-E	An internal error occurred during execution of the CIM function.	Contact the Support Center.
KAIC05802-E	The storage system returned an invalid response.	If the problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC05840-E	An internal error occurred. The iSCSI remote path could not be registered to the local storage system.	Make sure the specified parameters are correct. In addition, refer to the "Hitachi Command Suite Administrator Guide" for information about determining whether the RMI communication environment is configured correctly. If this problem persists, contact customer support, who may ask you to collect troubleshooting information.
KAIC05841-E	An internal error occurred. The iSCSI remote path that was registered to the local storage system could not be deleted.	If the problem persists, contact customer support, who may ask you to collect troubleshooting information.
KAIC05850-E	On the port "*port-name*", security is not set for the host storage domain "*host-storage-domain-name*" or the iSCSI initiator "*iscsi-initiator-name*".	Revise the specification.
KAIC05851-E	On the port "*port-name*", security has already been set for the host	Revise the specification.

Message ID	Message Text	Description
	storage domain "*host-storage-domain-name*" and the iSCSI initiator "*iscsi-initiator-name*".	
KAIC05852-E	For the specified port "*port-name*", the maximum number of iSCSI names "*maximum-number-of-iscsi-initiators*" has already been set or might be exceeded when the processing is executed.	Revise the specification.
KAIC05853-E	The specified nickname "*nickname*" is already being used for another iSCSI name on the same port "*port-name*".	Specify a nickname that is not being used by another iSCSI name on the same port, and then retry the operation.
KAIC05854-E	The specified iSCSI name "*iscsi-name*" is already being used by another host storage domain on the same port "*port-name*".	Specify an iSCSI name that is not being used by another host storage domain on the same port, and then retry the operation.
KAIC05855-E	The specified nickname "*nickname*" is already being used by another host storage domain on the same port "*port-name*".	Specify a nickname that is not being used by another host storage domain on the same port, and then retry the operation.
KAIC05856-E	The maximum number of host storage domains "*maximum-number-of-iscsi-targets*" for the port "*port-name*" cannot be exceeded.	Revise the specification so the maximum number of host storage domains is not exceeded.
KAIC05857-E	The specified iSCSI name "*nickname*" is invalid. The maximum length of the iSCSI name is *maximum-length-of-nickname* bytes.	Revise the specified iSCSI name, and then retry the operation.
KAIC05858-E	The specified iSCSI name "*iscsi-name*" is invalid. Specify the iSCSI name by using the iqn format or the eui format.	Revise the specified iSCSI name, and then retry the operation.
KAIC05859-E	Different nickname "*iscsi-nickname1*" and "*iscsi-nickname2*" are specified for iSCSI name "*iscsi-name*" on same port "*port-name*".	Revise the specified iSCSI name, and then retry the operation.
KAIC05860-E	An error occurred during access to an SMI-S Enabled storage system. A specified parameter or the status of the SMI-S provider or the SMI-S Enabled storage system might be invalid. KAIC06504-E	Monitoring data could not be specified for LDEV *device-number* because it contains invalid monitoring data. Re-execute the command after getting monitoring data.	Re-execute the command after getting monitoring data.
KAIC06505-E	This operation cannot be performed because the results of monitoring the specified pool (pool ID = *pool ID*) are being	Wait a while, and then try again.

Message ID	Message Text	Description
	processed. Wait a while, and then try again.	
KAIC06999-E	The SNMP command was cancelled after repeated failures.	Contact the Support Center.
KAIC07000-E	Unspecified agent error was encountered.	Contact the Support Center.
KAIC07001-E	Device Manager does not support the operation "*operation*" for the storage system type.	Device Manager Server does not support requests on the specified storage system.
KAIC07002-E	The license key required for the operation is not installed.	Install the required license key.
KAIC07003-E	The license key required for the operation is not active.	Activate the required license key.
KAIC07004-E	Invalid "LU" parameter. Integer expected.	Make sure the "LU" is an integer value, and then retry. If this problem persists, contact the Support Center.
KAIC07005-E	Missing parameter: storage system "objectID".	The ObjectID parameter of storage system is required. Provide the missing parameter, and then retry.
KAIC07006-E	Missing parameter: Port "objectID".	The ObjectID parameter of the port is required. Provide the missing parameter, and then retry.
KAIC07007-E	Missing parameter: Path "objectID".	The ObjectID parameter of Path is required. Provide the missing parameter, and then retry.
KAIC07008-E	Missing parameter: "WWN".	The WWN parameter is required. Provide the missing parameter, and then retry.
KAIC07009-E	The value for the "scsiID" parameter is incorrect.	Check the SCSI ID. Make sure that the SCSI ID is correct, and then retry. If this problem persists, contact the Support Center.
KAIC07010-E	The specified WWN "*WWN*" is invalid.	Make sure that the WWN parameter has the proper format.
KAIC07011-E	Missing parameter: WWNGroup "objectID".	ObjectID parameter of the WWNGroup is required. Provide the missing parameter, and then retry.
KAIC07012-E	Missing parameter: LUNGroup "objectID".	The ObjectID parameter of the LUNGroup is required. Provide the missing parameter, and then retry.

Message ID	Message Text	Description
KAIC07013-E	The objectID references an incorrect object type for the request.	Check the type of the specified object.
KAIC07014-E	Missing parameter: Logical Group "objectID".	The ObjectID parameter of the Logical Group is required. Provide the missing parameter, and then retry.
KAIC07015-E	Missing parameter: Host "objectID".	The ObjectID parameter of the Host is required. Provide the missing parameter, and then retry.
KAIC07016-E	Missing parameter: Logical Group Element "objectID".	The ObjectID parameter to be registered for the logical group as a logicalGroup element is required. Provide the missing parameter, and then retry. If this problem persists, contact the Support Center.
KAIC07017-E	Missing parameter: "objectID".	The ObjectID parameter is required. Provide the missing parameter, and then retry.
KAIC07018-E	Specified logical group is not found in the Device Manager database. Specified path of logical group is invalid. Logical group:"*Logical group path*"	Please specify the right logical group path or objectID.
KAIC07019-E	Missing parameter: Host "name".	The Name parameter of the Host is required. Provide the missing parameter, and then retry.
KAIC07020-E	A required element is missing from the request. "*element*"	Make sure that all of the required elements of a request are in place. Provide the missing element, and then retry. If this problem persists, contact the Support Center.
KAIC07021-E	There is more than one instance of the logical group. Specify the object ID. Logical group: "*Logical group path*"	Revise the parameter specifications.
KAIC07022-E	Missing parameter: Host Info "*unspecified-parameter*".	Specify the object name not registered in the Host Info.
KAIC07023-E	The specified parent logical group is invalid. A logical group cannot be its own parent.	For the parent, specify a logical group that is not the logical group being edited.
KAIC07024-E	The logical group parent is invalid. The request creates a circular group dependency.	The relationship between the logical group parent and logical group child is invalid. Check the specified group.

Message ID	Message Text	Description
KAIC07025-E	The logical group parent was not found in the Device Manager database.	Check the logical group parent.
KAIC07026-E	The logical group was not found in the Device Manager database.	Check the logical group.
KAIC07027-E	The storage system was not found in the Device Manager database.	Check the coding of storage system.
KAIC07028-E	The specified LDEV (devnum = "*Device number*") cannot be found in the Device Manager database.	Make sure that the specified LDEV is in the Device Manager database.
KAIC07029-E	The specified path (port ID = "*Port ID*", domain ID = "*Domain ID*", devNum = "*Device number*") cannot be found in the Device Manager database.	Check and, if necessary, revise the path specification.
KAIC07030-E	The host was not found in the Device Manager database.	Check the host.
KAIC07031-E	The host info was not found in the Device Manager database.	Check the host info.
KAIC07032-E	The "*parameter-name*" and "*parameter-name*" parameters cannot be specified at the same time.	Revise the specification.
KAIC07033-E	The number of elements specified in the request is invalid. (element = *element-name*)	Revise the number of elements in the request, and then try the operation again.
KAIC07034-E	Missing parameter: User "loginID".	The User "loginID" is required. Provide the missing parameter, and then retry.
KAIC07035-E	This operation cannot be executed because the maximum number of registerable RCUs or SSIDs has already been created.	Delete any unnecessary RCUs or SSIDs, and then try again.
KAIC07036-E	Missing parameter: Rule "ruleID".	The Rule "ruleID" is required. Provide the missing parameter, and then retry.
KAIC07037-E	This operation cannot be executed because the maximum number of registerable logical paths has been exceeded.	Delete any unnecessary logical paths, and then try again.
KAIC07038-E	Missing parameter: UserGroup "name".	The UserGroup "name" is required. Provide the missing parameter, and then retry.
KAIC07039-E	The user group was not found in the Device Manager database.	Check the user group.

Message ID	Message Text	Description
KAIC07040-E	Missing parameter: User "password".	The User "password" is required. Provide the missing parameter, and then retry.
KAIC07041-E	Missing parameter: User "groupName".	The user "groupName" is required. Provide the missing parameter, and then retry.
KAIC07042-E	The user group name is invalid. Specify no more than 25 characters for the name, using only the following characters: a-z A-Z 0-9 - = \ ` , . _	Revise the entered user group name.
KAIC07043-E	The user ID is invalid. Specify a user ID by using the following rules. Input rules : "*input-rules-for-user-ID*"	Revise the entered password.
KAIC07044-E	The password is invalid. Specify a password by using the following rules. Input rules: "*input-rules-for-passwords*"	Revise the entered password.
KAIC07045-E	The specified group "*specified-logical-group-name*" is not available because a child group with that name already exists under the group "*target-parent-logical-group-name*".	Change the name of the child group, and then retry.
KAIC07046-E	The specified group "*specified-logical-group-name*" is not available because a top-level group with that name already exists.	Change the group name, and then retry.
KAIC07047-E	A zero-length name is not permitted.	Revise the request, and then try again.
KAIC07048-E	The file named "*file-name*" was not found.	Contact the Support Center.
KAIC07049-E	The file named "*file-name*" cannot be read.	Contact the Support Center.
KAIC07050-E	The MCU-RCU or remote path cannot be created between the specified storage systems.	Revise the specification of the storage system, and then try again.
KAIC07051-E	Missing parameter: Debug level "value".	The debug level "value" is required. Provide the missing parameter, and then retry.
KAIC07052-E	The specified MCU port is not the Initiator.	Revise the specification of the logical path, and then try again.
KAIC07053-E	The debug level value "*debug-level-value*" is not valid.	Valid debug levels are 0 (All information) 1 (Informational messages and above) 2 (Warnings and above) 3 (Errors

Message ID	Message Text	Description
		and above) 4 (Fatal errors only). Make sure that the "value" is valid, and then retry.
KAIC07054-E	An attempt to unregister Subscriber "*Subscriber-ID*" has failed.	The specified Subscriber "*Subscriber-ID*" does not exist. Make sure that the "Subscriber-ID" is valid.
KAIC07055-E	Missing parameter: Subscriber "topic".	The topic of Subscriber is required. Provide the missing parameter, and then retry.
KAIC07056-E	An attempt to register Subscriber "*Subscriber-ID*" has failed.	Contact the Support Center.
KAIC07057-E	Missing parameter: Network resource "IP Address".	The "IP Address" is required. Provide the missing parameter, and then retry.
KAIC07058-E	The operation cannot be performed because the MCU-RCU or remote path has already been created between the specified storage systems.	Revise the MCU-RCU or the remote path specification, and then try again.
KAIC07059-E	The "count" parameter is invalid, and needs to be a positive integer. This attribute should only be specified once.	Check the specified "count". Make sure that it is a positive integer, and then retry.
KAIC07060-E	This operation cannot be performed because the specified port is not in a modifiable combination.	Revise the specification of the port, and then try again.
KAIC07061-E	The "start" parameter is invalid, and needs to be a date. This attribute should only be specified once.	Check the specified "start". Make sure that it is a valid date, and then retry.
KAIC07062-E	Missing parameter: Object "name".	The object "name" is required. Provide the missing parameter, and then retry.
KAIC07063-E	Invalid parameter: Alert "number" or "source" required.	Both Alert "number" and "source" are required. Provide the missing parameters, and then retry. If this problem persists, contact the Support Center.
KAIC07064-E	The parent storage system could not be found.	Check the description of storage system.
KAIC07065-E	Missing parameter: storage system "arrayFamily".	The "arrayFamily" of the storage system is required. Provide the missing parameter, and then retry.
KAIC07066-E	This operation cannot be performed because the specified	Revise the specification of the path, and then try again.

Message ID	Message Text	Description
	logical path is already registered for the RCU.	
KAIC07067-E	Missing parameter: storage system "searchCommunity".	Parameter "searchCommunity" of storage system is required. Provide the missing parameter, and then retry.
KAIC07068-E	The "objectID" parameter is invalid.	Make sure that the specified "objectID" is correct, and then retry.
KAIC07069-E	The logical group can only contain objects from a single storage system.	An attempt was made to add an object to a logical group. However, a group can only contain objects from a single array.
KAIC07070-E	The "Topic" parameter is invalid.	Make sure that the specified "Topic" is correct, and then retry.
KAIC07071-E	The parameter "name" exceeds the maximum possible length.	Make sure that the length of "name" does not exceed the maximum length, and then retry.
KAIC07072-E	The specified logical paths are not set.	Revise the specification of the logical path, and then try again.
KAIC07073-E	Invalid request target parameter: Expected "*expected-class-name*"; found "*specified-class-name*".	Contact the Support Center.
KAIC07074-E	Missing parameter: Port Controller "ID".	The Port Controller "ID" is required. Provide the missing parameter, and then retry.
KAIC07075-E	Missing parameter: Port Controller "Mode".	The "Mode" of Port Controller is required. Provide the missing parameter, and then retry.
KAIC07076-E	The value for Port Controller Mode is invalid.	Valid Port Controller value is required. See the Device Manager Server XML API manual.
KAIC07077-E	The requested mode cannot be set on a non-Fibre Channel Port Controller.	This request can only be attempted for a Fibre Channel port.
KAIC07078-E	The ports for the requested Port Controller could not be found.	Contact the Support Center.
KAIC07079-E	High Speed mode cannot be set because port "*port1-ID*" and port "*port2-ID*" have different host modes.	High Speed mode requires that port "*port1-ID*" and "*port2-ID*" have the same host mode.
KAIC07080-E	High Speed mode cannot be set because port "*port1-ID*" and port "*port2-ID*" have different topologies.	High Speed mode requires that port "*port1-ID*" and "*port2-ID*" have the same topology.

Message ID	Message Text	Description
KAIC07081-E	High Speed mode cannot be set because port "*port1-ID*" and port "*port2-ID*" have the same fibre address.	High Speed mode requires that port "*port1-ID*" and "*port2-ID*" have the same fibre address.
KAIC07082-E	High Speed mode cannot be set because port "*port-ID*" topology is Point-To-Point.	High Speed mode requires that the topology of port "*port-ID*" be FC-AL.
KAIC07083-E	The high speed mode cannot be set because LDEV "*device-number*" is assigned to both port "*port1-ID*" and port "*port2-ID*".	Release the LDEV from one of the ports, and then retry the operation.
KAIC07084-E	The requested port has no WWN.	Check the WWN of port.
KAIC07085-E	Insufficient number of physical devices for array group.	The creation of an array group requires at least two physical devices.
KAIC07086-E	The requested host mode is not available on this storage system.	Check the host mode or storage system.
KAIC07087-E	Missing parameter: Rule "operation".	Rule "operation" is required. Provide the missing parameter, and then retry.
KAIC07088-E	Missing parameter: Rule "ruleType".	Rule "ruleType" is required. Provide the missing parameter, and then retry. If this problem persists, contact the Support Center.
KAIC07089-E	Missing parameter: Rule "target".	Rule "target" is required. Provide the missing parameter, and then retry. If this problem persists, contact the Support Center.
KAIC07090-E	A parameter is missing: "group name" must be specified.	"group name" is required. Specify the missing parameter, and then retry.
KAIC07091-E	Missing parameter: User "role".	User "role" is required. Provide the missing parameter, and then retry.
KAIC07092-E	The role is invalid.	Check the role of user.
KAIC07093-E	An invalid cluster number has been specified for the Port Controller.	Check the number of the Port Controller.
KAIC07094-E	High speed mode is unavailable.	High Speed mode is unsupported with the specified Port Controller.
KAIC07095-E	Invalid CHA number.	Assign a valid card number.
KAIC07096-E	Invalid topology number.	Assign a valid topology.
KAIC07097-E	Invalid fibre address.	Assign a valid fibre address.

Message ID	Message Text	Description
KAIC07098-E	This operation cannot be executed because the maximum number of registerable MU number has been exceeded.	Delete any unnecessary pairs, and then try again.
KAIC07099-E	Invalid channel speed.	Assign a valid channel speed.
KAIC07100-E	The parameter "portID" is out of range. The valid range is "*minimum-port-ID*" to "*maximum-port-ID*".	Specify a valid value.
KAIC07101-E	The parameter "LU" is out of range. The valid range is "*minimum-LU*" to "*maximum-LU*".	Specify a valid value.
KAIC07102-E	The parameter "lun" is out of range. The valid range is "*minimum-lun(hex)* (*minimum-lun*)" to "*maximum-lun(hex)* (*maximum-lun*)".	Specify a valid value.
KAIC07103-E	The port was not found on the storage system.	Check the specified port and storage system.
KAIC07104-E	The LU "*device-number*" was not found on the storage system.	Check the specified LU and storage system.
KAIC07105-E	The LUN "*LUN*" was not found on the storage system.	Check the specified LUN and storage system.
KAIC07106-E	The LU "*device-number*" is already in use on port "*port-name*".	Check the LU.
KAIC07107-E	The LUN "*LUN*" is already in use on port "*port-name*".	Check the specified LUN.
KAIC07108-E	The LU "*device-number*" is an OnDemand device and cannot be used for an LUN.	Check the specified LU.
KAIC07109-E	This command cannot be processed, since both a "devNum" attribute of a Path element and LDEV elements are not specified.	Check the request.
KAIC07110-E	The LUN cannot be deleted, because one or more hosts are using it. LUN Security must be removed for this LUN before the path can be deleted.	Clear the LUN security for this LUN, and then retry.
KAIC07111-E	The WWN "*WWN*" cannot be deleted. The WWN was not found on the port.	Make sure that the WWN and LUN are specified correctly. Otherwise, no action is required.
KAIC07112-E	The port (portID = "*Port ID*") cannot be found in the storage system.	Check and, if necessary, revise the port or storage system specification.

Message ID	Message Text	Description
KAIC07113-E	The number of logical paths cannot go below the set minimum number of paths.	Revise the specification of the logical path, and then try again.
KAIC07114-E	The security for this LUN cannot be changed, since it is part of LUNGroup "*LUN-group-nickname*".	Delete the LUNGroup, and reissue the secure LUN command.
KAIC07115-E	The LUN cannot be deleted, since it is part of LUNGroup "*LUN-group-nickname*".	Delete the LUNGroup, and then retry.
KAIC07116-E	The specified remote paths are invalid. One port from both controller0 and controller1 must be specified.	Revise the specification of the remote path, and then try again.
KAIC07117-E	The command cannot be executed because the specified WWN group is not on the port "*port-name*".	Make sure that the correct WWN group and port are specified, and then try again.
KAIC07118-E	The command cannot be executed because the specified LUN group is not on the port "*port-name*".	Make sure that the correct LUN group and port are specified.
KAIC07119-E	The LUN referenced by the HostInfo was not found in the storage system.	Check the LUN.
KAIC07120-E	The specified host ("*host-name-or-objectID*") does not exist.	Revise the parameter specifications.
KAIC07121-E	The logical group element cannot be deleted, because the element is not part of the Logical group.	Check the specified objectID.
KAIC07122-E	The host name "*host-name*" is already used by an existing host.	Specify a new host name.
KAIC07123-E	The host info record is already contained in the Device Manager database.	Check the HostInfo.
KAIC07124-E	The storage system with serial number "*serial-number*" was not found in the Device Manager database.	Check the specified objectID of the storage system.
KAIC07125-E	Cannot delete host "*host-name*", because one of the WWNs is securing an LUN.	Clear the LUN before deleting the host.
KAIC07126-E	The LDEV "*device-number*" is a *PP Name (VolumeMigration)* reserved volume and cannot be used for an LUN.	Check the LDEV.

Message ID	Message Text	Description
KAIC07127-E	Invalid parameter: Filter "Condition volumeKind"	Make sure that the "Condition volumeKind" is valid. The valid Condition volumeKinds are "MAINFRAME", "INTERMEDIATE", "OPEN" or combinations of these.
KAIC07128-E	The logical unit with LU "*device-number*" is a command device. The LUN cannot be deleted.	Check the LU.
KAIC07129-E	The WWN "00.00.00.00.00.00.00.00" is invalid, and cannot be used to secure an LUN.	Make sure that the WWN is correct.
KAIC07130-E	An LUN cannot be added to a port of type "*port-type*".	Check the port.
KAIC07131-E	The SCSI ID "*SCSI-ID*" was not found on the storage system.	Check the SCSI ID.
KAIC07132-E	This operation cannot be performed for a port of the port type "*port-type*".	Check the port.
KAIC07133-E	The maximum number of WWNs ("*maximum-number-of-WWNs*") cannot be exceeded.	No more WWNs can be added to the port. Delete WWNs that are not used, and then retry.
KAIC07134-E	The WWN "*WWN*" is already in use by host "*host-name*".	Check the specified WWN.
KAIC07135-E	Physical device #"*PDEV-ID*" is already in use (role = "*role*").	Check the PDEV "pdevID".
KAIC07136-E	Physical device #"*PDEV-ID*" is not on the proper chassis for the array group.	A PDEV with chassis specified as array groups is required.
KAIC07137-E	A logical unit that has an LUN defined cannot be deleted.	The LUN must be deleted prior to deleting the logical unit.
KAIC07138-E	An array group that has an LUN defined cannot be deleted.	The LUN must be deleted prior to deleting the array group.
KAIC07139-E	Parameter "chassis" is out of range. The valid range is "*minimum-number-of-chassis*" to "*maximum-number-of-chassis*".	Specify a valid "chassis" range in within the range "*minimum-number-of-chassis*" to "*maximum-number-of-chassis*", and then retry.
KAIC07140-E	The Port Controller was not found in the Device Manager database.	Check the specified Port Controller.
KAIC07141-E	The maximum number of LDEVs ("*maximum-number-of-LDEVs*") for the array group cannot be exceeded.	Ensure that the number of LDEVs in the array group does not exceed the maximum, and then retry.
KAIC07142-E	An attempt to delete a spare drive has failed. The physical device #"*PDEV-ID*" is not a spare	Check the specified PDEV.

Message ID	Message Text	Description
	drive or is a spare drive which is currently being used.	
KAIC07143-E	The spare physical device #"*spare-physical-device-ID*" must be deleted from the array group.	Delete this array group to delete this spare physical device.
KAIC07144-E	An invalid emulation type was specified.	The emulation type specified is not supported by the operation. Device Manager Server can only create logical units using OPEN emulation.
KAIC07145-E	An invalid capacity was specified for the desired emulation type.	Make sure that the capacity falls within the valid range for the emulation type.
KAIC07146-E	Insufficient free space on the specified array group.	Specify the size within the scope of free space. For details, see the manual that corresponds to your storage system.
KAIC07147-E	The maximum number of array groups ("*maximum-number-of-array-groups*") for the chassis cannot be exceeded.	Check the specified chassis.
KAIC07148-E	The parameter "defaultPortController" is out of range. The valid range is "*minimum-controller-number*" to "*maximum-controller-number*".	Specify a "defaultPortController" within the range "*minimum-controller-number*" to "*maximum-controller-number*", and then retry.
KAIC07149-E	Device Manager does not manage the specified Port Controller "*port-controller-ID*".	Check the specified Port Controller.
KAIC07150-E	Device Manager does not manage the specified port "*port-name*".	Check the specified port.
KAIC07151-E	Cannot find the specified storage system.	Check the specified storage system.
KAIC07152-E	The parameter "domainID" is out of range. The valid range is "*minimum-number-of-domainID*" to "*maximum-number-of-domainID*".	Specify a "domainID" within the range "*minimum-number-of-domainID*" to "*maximum-number-of-domainID*", and then retry.
KAIC07153-E	The domainID "*domainID*" is already in use on port "*port-ID*".	Change the domainID.
KAIC07154-E	The maximum number of HostStorageDomains ("*maximum-number-of-host-storage-domains*") for the port "*port-number*" cannot be exceeded.	Specify a valid value.
KAIC07155-E	The host storage domain (port ID = "*Port ID*", domainID = "*Domain*	Check and, if necessary, revise the host storage domain specification.

Message ID	Message Text	Description
	ID") cannot be found in the Device Manager database.	
KAIC07156-E	Missing parameter: HostStorageDomain "objectID".	The HostStorageDomain "objectID" is required. Provide the missing parameter, and then retry. If this problem persists, contact the Support Center.
KAIC07157-E	Missing parameter: "host mode" in the ModifyPort request.	The HostStorageDomain "host mode" is required. Provide the missing parameter, and then retry. If this problem persists, contact the Support Center.
KAIC07158-E	"name" of the specified object cannot be deleted.	Check the specified objectID.
KAIC07159-E	The partitioned storage administrator who manages this storage system cannot modify the configuration of the port (port ID = "*Port ID*") that belongs to SLPR: "*SLPR-Number*".	Check and, if necessary, revise the port specification.
KAIC07160-E	The security for the LUN cannot be changed, because the WWN is part of WWNGroup "*WWNGroup*".	Delete the WWNGroup, and reissue the secure/unsecure LUN command.
KAIC07161-E	Invalid parameter: Filter "Condition type"	Revise the value you specified in Condition type. Valid values are `ALL`, `FREE`, `ASSIGNED`, `UNASSIGNED` and `RESERVED`.
KAIC07162-E	Missing parameter: "Port".	Port parameter required. Provide the missing parameter, and then retry. If this problem persists, contact the Support Center.
KAIC07163-E	The specified port option is invalid.	This is an informational message only. No additional action is required.
KAIC07164-E	The specified host mode 2 is invalid.	This is an informational message only. No additional action is required.
KAIC07165-E	Inconsistent combinations of host modes are specified for the same port.	The specified storage system does not support different combinations of host modes for the same port. Revise the settings.
KAIC07166-E	Inconsistent combinations of host mode 2 are specified for the same port.	The specified storage system does not support different combinations of host mode 2 for the same port. Revise the settings.
KAIC07167-E	XML Message has no API Version for the URLLink.	Contact the Support Center.

Message ID	Message Text	Description
KAIC07168-E	The specified WWN does not exist on the target "*target-element*".	Check the specified WWN, and then retry.
KAIC07169-E	This operation cannot be performed for a Port Controller of NAS.	The operation is not supported for a Port Controller of NAS.
KAIC07170-E	The specified user ID is invalid.	Specify an effective user ID.
KAIC07171-E	The specified LU used by *PP Name (TrueCopy)*/*PP Name (ShadowImage)* cannot be deleted.	Check and, if necessary, revise the LU specification.
KAIC07172-E	No more command devices can be added to the specified storage system.	Up to 2 command devices can be specified. Delete any unnecessary command device, and then retry.
KAIC07173-E	This operation cannot be performed for a system volume (devNum = "*Device number*") of NAS.	The operation is not supported for an NAS system volume.
KAIC07174-E	For the specified emulation type "*emulation-type*", the creation capacity automatically computed from the specified size "*specified-size-in-KB*KB" is "*creation-size-in-KB*KB". Re-specify this value so that the creation capacity is within the range of "*lower-limit-size-in-KB*KB" to "*upper-limit-size-in-KB*KB".	Make sure that the capacity falls within the valid range for the emulation type.
KAIC07175-E	Free space is insufficient on the specified array group. Specify the size within the range of the free space. The automatically computed capacity for creation is "*creation-size-in-KB*KB".	Specify the size within the range of free space.
KAIC07176-E	A Command Device without an LUN defined cannot be added.	Perform this operation after the definition of an LUN.
KAIC07177-E	The last path of an LU (devNum = "*Device number*") set for a command device cannot be deleted.	Delete the command device, and then the path.
KAIC07178-E	The specified command option is invalid.	An invalid command option is specified.
KAIC07179-E	Invalid parameters: domainID and WWN cannot be specified at the same time.	Make sure that the request is correct.
KAIC07180-E	In LUSE creation, LDEV "*device-number*" overlaps and is specified.	Check the specification of LDEV.

Message ID	Message Text	Description
KAIC07181-E	Missing parameter: LogicalUnit "commandDevice".	The commandDevice parameter of LogicalUnit is required. Provide the missing parameter, and then retry. If this problem persists, contact the Support Center.
KAIC07182-E	The LU "*device-number*" is a *PP Name (VolumeMigration)* reserved volume, and cannot be used for a command device.	Check the LU.
KAIC07183-E	The LU "*device-number*" is a LUSE device, and cannot be used for a command device.	Check the LU.
KAIC07184-E	The specified LU "*device-number*" cannot be used as a Command Device because it is being used by *PP Name (TrueCopy)*/*PP Name (ShadowImage)*.	Check and, if necessary, revise the LU specification.
KAIC07185-E	The last path of an LU (devNum = "*Device number*") used by *PP Name (TrueCopy)*/*PP Name (ShadowImage)* cannot be deleted.	Check and, if necessary, revise the path specification.
KAIC07186-E	To create a command device, the size of specified LU must be "*minimum size of LU which can create a command device*" KB or more.	Check the LU.
KAIC07187-E	If the specified path is not a representative LDEV configuring a LUSE, the path cannot be deleted.	Use Disk Array Management Program or Storage Navigator Modular to delete the path that is not a representative LDEV configuring a LUSE, and then use Device Manager to refresh the storage system.
KAIC07188-E	The path for an LU used by *PP Name (TrueCopy)*/*PP Name (ShadowImage)* cannot be deleted.	Check and, if necessary, revise the path specification.
KAIC07189-E	Device Manager Server does not support the operation "*operation*" for the specified LDEV.	Device Manager Server supports the operation for only open volumes. Check the specified LDEV.
KAIC07190-E	This command cannot be processed, since the specified LU is a command device.	Check the LU.
KAIC07191-E	This command cannot be processed, since the specified LU in not a command device.	Check the LU.
KAIC07192-E	The parameter "*element-name*" is insufficient. Either "*attribute-*	Check the parameter.

Message ID	Message Text	Description
	name-1" or "*attribute-name-2*" must be specified.	
KAIC07193-E	This command cannot be processed, since command device security is already set for the specified LU.	Check the LU.
KAIC07194-E	This command cannot be processed, since command device security is not set for the specified LU.	Check the LU.
KAIC07195-E	A non-OPEN emulation LogicalUnit cannot be set as a command device.	Check the LU.
KAIC07196-E	The LU "*device-number*" is already being used for "*PP Name (QuickShadow)*" "*volume type of QuickShadow*" .	Check the LU.
KAIC07197-E	An array group cannot consist of PDEVs with different drive types.	Make sure that the PDEV specification is valid.
KAIC07198-E	A RAID0 array group cannot consist of PDEVs with specified drive types.	Make sure that the PDEV specification is valid.
KAIC07199-E	The specified object already exists in the logical group "*LogicalGroup name*".	Revise the object specifications.
KAIC07200-E	The request has failed: empty messageID in request.	GetRequestStatus requires a valid messageID attribute. Add a valid messageID attribute to the request, and then retry.
KAIC07201-E	An attempt to create an external array group has failed. The specified external storage system is in the same storage system.	Revise the specification.
KAIC07202-E	The request has failed: messageID "*message-ID*" not found.	No data was found for message ID. This is most likely because the data was already retrieved. See if the Device Manager database has been updated with the results of the request (i.e. Add storage system).
KAIC07203-E	This command cannot be executed because a normal volume and a V-VOL of "*PP Name (QuickShadow)*" are mixed in the specified LU (devNum = "*Device number*" and devNum = "*Device number*").	Check and, if necessary, revise the LU specification.
KAIC07204-E	This command does not support the specified emulation type.	Specify "OPEN-V" as the emulation type.

Message ID	Message Text	Description
KAIC07205-E	An invalid combination of path group IDs is specified.	Revise the specification.
KAIC07206-E	For a remote command device, the parameter "*number of LU*" cannot be specified for numOfLUs.	Revise the specification.
KAIC07207-E	An attempt to create an external array group has failed because the combination of the specified port "*port-name*" and external storage system port (WWN = "*port-WWN*") is invalid.	Revise the specifications for the port and external storage system port.
KAIC07208-E	An attempt to create an external array group has failed because the combination of the specified port "*port-name*" and external storage system volume (LUN = "*LUN*") is invalid.	Revise the specifications for the port and external storage system volume.
KAIC07209-E	The external volumes for alternate paths are different.	Revise the alternate paths specification.
KAIC07210-E	The replication group is already registered in the Device Manager database.	Check the ReplicationGroup.
KAIC07211-E	The request failed, since a null objectID exists in ReplicationGroup.	"*api-name*" requires a valid `objectID` attribute in the ReplicationGroup. Add an objectID to the request, and then retry.
KAIC07212-E	The specified ReplicationGroup object is not found or multiple hosts with the same IP address are registered.	Revise the request. This request may fail when multiple hosts with the same IP address are registered, although the specified ReplicationGroup object is found in the database. Do the following: 1. Delete the unused hosts. 2. Refresh the storage system. 3. Retry the request.
KAIC07213-E	The request failed, since a null objectID exists in ReplicationInfo.	"*api-name*" requires a valid `objectID` attribute in the ReplicationInfo. Add an objectID to the request, and then retry.
KAIC07214-E	An attempt to execute the request has failed. The object specified in ReplicationInfo was not found in the database.	Revise the request, and then try again.
KAIC07215-E	Execution of the request failed, because the specified configuration file or replication	Check the following:

Message ID	Message Text	Description
	group cannot be handled by Device Manager. Refresh the storage system information, check the parameters, and then try the operation again. If this error occurs again, contact the customer support center, who might ask you to collect troubleshooting information.	• Property file of the applicable host agent • To perform a pair operation for volumes on a virtual storage machine, check one of the following, depending on the operation: 1. To specify virtual IDs for the pair volumes, make sure that HORCM_VMCD is defined in the configuration file. 2. To specify physical IDs for the pair volumes, make sure that HORCM_VMCD is not defined in the configuration file.
KAIC07216-E	The request failed, since the specified ReplicationInfo is not in the specified ReplicationGroup.	Check the request, and then retry.
KAIC07217-E	The specified command option is invalid. The number of specified command option items is "*number-of-specified-option-items*", but the API requires at least "*minimum-items-api-requires*".	Check the request, and then retry.
KAIC07218-E	The specified command option is invalid. The number of specified command option items is "*number-of-specified-option-items*", but the API requires at most "*maximum-items-api-demands*".	Check the request, and then retry.
KAIC07219-E	The request failed, since the specified copyTrackSize "*copy-track-size*" is invalid.	Check the request, and then retry.
KAIC07220-E	The replication controller pair was not found in the Device Manager database.	Check what is specifies for the replication controller pair.
KAIC07221-E	The specified logical unit (array type = "*type-of-LU*", serial number = "*LU-serial-number*", device number = "*LU-device-number*") cannot be used in a pair because the host's I/O suppression mode is enabled.	Revise the logical unit specification.
KAIC07222-E	The specified LU "*device number*" cannot be used for a LUSE device because it is being used by *PP Name (TrueCopy)*/*PP Name (ShadowImage)*.	Check and, if necessary, revise the LU specification.

Message ID	Message Text	Description
KAIC07223-E	The LUSE cannot be deleted because the specified LU "*device number*" is used by *PP Name (TrueCopy)*/*PP Name (ShadowImage)*.	Check and, if necessary, revise the LU specification.
KAIC07224-E	The specified host mode option is invalid.	Revise the host mode option specification.
KAIC07225-E	The object ID of the host is not specified.	Revise the request, and then retry.
KAIC07226-E	The specified object ID of the host is invalid.	Specify the object ID of a host that batch-manages pairs.
KAIC07227-E	The object ID of "*Element name*" cannot be specified.	Revise the request, and then retry.
KAIC07228-E	The specified "replicationOwnerHost" was not found in the Device Manager database.	Revise the request, and then retry.
KAIC07229-E	The "*Element name*" element is not specified.	Revise the request, and then retry.
KAIC07230-E	The command cannot be executed because the specified LDEV "*Device number*" is protected.	Revise the LDEV specification.
KAIC07231-E	The command cannot be executed because a path is set for the specified LDEV "*Device number*".	Revise the LDEV specification.
KAIC07232-E	The command cannot be executed because the specified LDEV "*Device number*" is set to a *PP Name (VolumeMigration)* reserved volume.	Revise the LDEV specification.
KAIC07233-E	The command cannot be executed because the specified LDEV "*Device number*" is not a representative LDEV making up a LUSE Volume.	Revise the LDEV specification.
KAIC07234-E	The command cannot be executed because the specified LDEV "*Device number*" is a pair device.	Revise the LDEV specification.
KAIC07235-E	The LDEV "*Device number*" specification is duplicated.	Revise the LDEV specification.
KAIC07236-E	Invalid parameter: Filter "Condition host"	Make sure that the "Condition host" is valid. The valid Condition hosts are "`ASSIGNED`" and "`UNASSIGNED`".

Message ID	Message Text	Description
KAIC07237-E	Multiple instances of the same logical unit "*Device number*" have been specified.	Revise the specifications for the logical unit.
KAIC07238-E	It is not possible to create an unformatted logical unit in the specified storage system.	Revise the storage system specification.
KAIC07239-E	A Quick Format cannot be executed because there is no System Disk area.	Create the System Disk area, and then try again.
KAIC07240-E	This command cannot be executed, because the specified LU is being used as a remote command device in another storage system.	Revise the LU specification.
KAIC07241-E	The command cannot be executed because the specified LDEV "*Device number*" was being used for *PP Name (Dynamic Provisioning)*.	Revise the LDEV specification.
KAIC07242-E	The LDEV "*device-number*" is a command device. The LDEV cannot be deleted.	Check the LDEV.
KAIC07243-E	The LU "*device-number*" cannot be formatted because it is an external volume, pool volume, or journal volume.	Check the specified LU, and then try again.
KAIC07244-E	The *option-name* option and *option-name* option cannot be specified at the same time.	Check the request, and then try again.
KAIC07245-E	The specified external volume is a command device. When specifying the capacity of the LU, you need to specify the same capacity as the external volume.	Revise the LU specification.
KAIC07246-E	An attempt to create an external array group has failed because two or more combinations of the port "*port-name*" and external storage system port (WWN = "*port-WWN*") are specified.	Revise the specifications for the port and external storage system port.
KAIC07247-E	This operation cannot be performed for a port whose port role is "*port-role*".	Revise the port specification.
KAIC07248-E	The specified external volume is a command device. Mapping to an internal volume is required.	Revise the specification.
KAIC07249-E	The cache mode cannot be set for a remote command device.	Revise the specification.

Message ID	Message Text	Description
KAIC07250-E	The LDEV related to the specified *PP Name (VolumeMigration)* migration plan was not found in the Device Manager database.	Check and, if necessary, revise the specification.
KAIC07251-E	The specified parameter "*parameter-name*" was not found in the Device Manager database. The name might have been changed, or Device Manager might not be managing the object anymore. Revise the specified value, and then retry the operation.	Revise the specified value, and then retry the operation.
KAIC07252-E	LUSE is set for the specified LDEV. The LDEV cannot be used for a *PP Name (VolumeMigration)* reserved volume.	Revise the LDEV specification.
KAIC07253-E	The specified VolumeMigration element objectID is invalid.	Revise the objectID specification.
KAIC07254-E	A path is set for the specified LDEV. The LDEV cannot be used for a *PP Name (VolumeMigration)* reserved volume.	Revise the LDEV specification.
KAIC07255-E	The specified LDEV is a command device. It cannot be used for a *PP Name (VolumeMigration)* reserved volume.	Revise the LDEV specification.
KAIC07256-E	The specified LDEV is already set as a *PP Name (VolumeMigration)* reserved volume.	Revise the LDEV specification.
KAIC07257-E	The specified LDEV is not *PP Name (VolumeMigration)* reserved volume.	Revise the LDEV specification.
KAIC07258-E	An attempt to execute the request has failed. A set or release operation for the *PP Name (VolumeMigration)* reserved volume cannot be specified simultaneously.	Unify the specification of the reserved volume.
KAIC07259-E	The specified *PP Name (VolumeMigration)* migration plan is not in the storage system ("*Array type*", "*Serial number*").	Check and, if necessary, revise the request.
KAIC07260-E	An attempt to execute the request has failed. The same ownerID must be specified for all VolumeMigration elements.	Revise the ownerID specification, and then retry.
KAIC07261-E	Invalid parameters were specified. The same sourceDevNum "*sourceDevNum*	Revise the sourceDevNum specification for the

Message ID	Message Text	Description
	of volume migration" was specified for two or more VolumeMigration elements in the request.	VolumeMigration elements, and then retry.
KAIC07262-E	Invalid parameters were specified. The same targetDevNum "*targetDevNum of volume migration*" was specified for two or more VolumeMigration elements in the request.	Revise the targetDevNum specification for the VolumeMigration elements, and then retry.
KAIC07263-E	The owner ID specified in the request does not match the owner ID of the target volume.	Check the owner ID specifications.
KAIC07264-E	An attempt to execute the request has failed. The ownerID must be specified in the VolumeMigration element.	Specify the same value as the ownerID of the target volume related to the VolumeMigration element.
KAIC07265-E	An attempt to execute the request has failed. The emulation types of the specified source and target volumes do not match.	For the source and target volumes, specify volumes that have the same emulation type.
KAIC07266-E	An attempt to execute the request has failed. The size of the specified source and target volumes do not match.	For the source and target volumes, specify volumes that are of the same size.
KAIC07267-E	An attempt to execute the request has failed. The specified volume is a pair consisting of a standard volume and a CVS volume.	Specify standard volumes or CVS volumes for the source and target volumes.
KAIC07268-E	An attempt to execute the request has failed. Specify the same hihsmOwnerID for all LDEVs.	Revise the hihsmOwnerID specification, and then retry.
KAIC07269-E	The specified LDEV is protected. It cannot be used for a *PP Name (VolumeMigration)* reserved volume.	Revise the LDEV specification.
KAIC07270-E	An attempt to execute the request has failed. The specified LDEV is a pair device. It cannot be used for a *PP Name (VolumeMigration)* reserved volume.	Revise the request, and then retry.
KAIC07271-E	An attempt to execute the request has failed. The parameter "*Attribute name,*" is outside the valid range. The valid range is from "*Min. parameter value,*" to "*Max. parameter value*".	Revise the request, and then retry.

Message ID	Message Text	Description
KAIC07272-E	The specified LDEV cannot be used because it is set for CacheResidency.	Revise the LDEV specification.
KAIC07273-E	The parameter is invalid. (Filter "Condition hostType")	Revise the specification, and then retry.
KAIC07274-E	The object ID of the host or the host name cannot be specified at the same time as the filter used for selecting the host.	Revise the specification, and then try again.
KAIC07275-E	The specified LDEV is being used for *PP Name (Dynamic Provisioning)*, and cannot be used for *PP Name (VolumeMigration)*.	Check the microcode version of the storage system.
KAIC07276-E	The path cannot be set because the specified LDEV "*Device number*" is being used in the pool of *PP Name (Dynamic Provisioning)*.	Make sure the LDEV specifications are correct.
KAIC07277-E	A *PP Name (Dynamic Provisioning)* volume cannot be deleted in Device Manager.	Revise the LogicalUnit specification.
KAIC07278-E	A parameter is not specified. ("*parameter*")	Revise the specification, and then try again.
KAIC07279-E	The specified user ID or password is too long. This user ID and password cannot be used to access the SMI-S provider from Device Manager. Specify a user ID and password by using 1024 bytes or fewer, and then try again.	Specify a valid user ID and password, and then try again.
KAIC07280-E	The specified LDEV has a different logical DKC. The system cannot create the LUSE. (devNum = "*Device number*")	Revise the LDEV specification.
KAIC07281-E	A parameter is invalid. (Filter: "Condition portType")	Revise the specification, and then retry the operation.
KAIC07282-E	The P-VOL's pool ID does not match the S-VOL's pool ID.	Revise the pool ID specification.
KAIC07283-E	A pool necessary to create the specified pair or configuration file does not exist in the storage system. (serial number = "*serial-number*", pool ID = "*pool-ID*")	Check the requirements of the pool to be used for creating a pair, and then do either of the following: • Create the pool described in the message. • Specify a pool that exists in the storage system .

Message ID	Message Text	Description
KAIC07284-E	An attempt to execute the request has failed. All replication pairs in the same replication group must use the same Pool.	Revise the request, and then try again.
KAIC07285-E	A parameter is invalid. (parameter = "*parameter*")	Revise the specification, and then try again.
KAIC07286-E	This operation cannot be performed because the command device is not specified.	Specify the command device, and then try again.
KAIC07287-E	The Snapshot Group ID was not found in the Device Manager database.	Check the Snapshot Group ID.
KAIC07288-E	This operation cannot be performed because the specified ports are not Fibre Channel ports.	Revise the specification of the ports, and then try again.
KAIC07289-E	This operation cannot be performed because the specified ports are not SLPR:0 ports.	Revise the specification of the ports, and then try again.
KAIC07290-E	This command cannot be executed because the specified LDEV "*device-number*" is being used by a pool of "*PP-name (Dynamic Provisioning)*".	Revise the LDEV specification.
KAIC07291-E	No more DM-LUs can be added to the specified storage system.	Delete any unnecessary DM-LUs, and then try again.
KAIC07292-E	This operation cannot be performed because the specified LU size, "*LU-size*" GB, is insufficient.	Revise the specification of the LU, and then try again.
KAIC07293-E	This operation cannot be performed because the specified LU is not set as a DM-LU.	Revise the specification of the LU, and then try again.
KAIC07294-E	The specified LU is not in the Device Manager database.	Revise the specification of the LU, and then try again.
KAIC07295-E	This operation cannot be performed because the specified remote path does not use a Fibre Channel connection.	Revise the remote path specification, and then try again.
KAIC07296-E	The specified operation cannot be performed, because the volume (*Device number*) is a quorum disk.	Check and, if necessary, revise the specified volume, and then try the operation again.
KAIC07297-E	Device Manager cannot be used to perform operations on the specified pair or pairs.	Device Manager does not support operations on High Availability Manager copy pairs or External Storage Availability Manager copy pairs. Release the High

Message ID	Message Text	Description
		Availability Manager or External Storage Availability Manager configuration for the selected copy pair or select a different copy pair, and then retry the operation.
KAIC07298-E	This operation cannot be performed because the specified LU is already set as a DM-LU.	Revise the specification of the LU, and then try again.
KAIC07299-E	The serial number of the specified storage system (IP address = "*IP-address*") does not match the serial number registered in Device Manager. The serial number might have been changed during maintenance work. (registered serial number = "*registered-serial-number*", current serial number = "*current-serial-number*")	Delete the target storage system information from Device Manager, and then re-add it.
KAIC07300-E	A negative value is specified for the Messages timeToWait attribute.	Specify a valid value.
KAIC07301-E	The Subscriber is not registered.	Register the Subscriber by using AddSubscriber in the XML-API.
KAIC07302-E	Missing parameter in the URLLink request.	Check the specified URLLink.
KAIC07303-E	The URLLink in the request does not exist.	Revise the option and objectID specification.
KAIC07304-E	The URLLink request contains both the objectID and linkedID parameters.	Either objectID or linkedID must be specified, but not both.
KAIC07305-E	The objectID in the URLLink request does not reference a known storage system.	Check the specified storage system.
KAIC07306-E	The URLLink acquired from the SMI-S Enabled storage system cannot be deleted.	Revise the URLLink specification.
KAIC07307-E	The object specified for *parameter* cannot be found.	Revise the URLLink specification.
KAIC07308-E	Device Manager does not support URLLink operations for specified Device Manager objects.	Revise the URLLink specification.
KAIC07309-E	The request failed. "All Resources" is not specified for "groupName".	Review the specified user groups.
KAIC07310-E	The host is not specified for performance data acquisition.Specify the host for	None.

Message ID	Message Text	Description
	the property "server.cim.agent" in the "server.properties" file, restart Device Manager Server, and the retry the operation.	
KAIC07311-E	Device Manager does not manage the specified host "*Host name*".	Add the specified Host, and the retry.
KAIC07312-E	The Port parameter and LogicalUnit parameter cannot be specified at the same time.	Revise the specification, and then retry the operation.
KAIC07313-E	Neither the Port parameter nor the LogicalUnit parameter is specified.	Revise the specification, and then retry the operation.
KAIC07314-E	The specified storage system does not support performance data acquisition, or the necessary microcode version is not installed.	Revise the specification, and then retry the operation.
KAIC07315-E	The specified range of LogicalUnit (from "*Lower value for LU range*" to "*Upper value for LU range*") is invalid.	Revise the specified parameters, and then retry the operation.
KAIC07316-E	Only one *element* element can be specified for the specified storage system.	Revise the element specification, and then retry the operation.
KAIC07317-E	For the *parameter* parameter, only one *element* element can be specified.	Revise the request, and then retry the operation.
KAIC07318-E	This operation cannot be performed because the specified user is assigned to multiple user groups.	This operation cannot be executed because the user is assigned to multiple user groups.
KAIC07319-E	This operation cannot be performed because the specified user is not assigned to the Built-in user group.	This operation cannot be executed because the user is not assigned to the Built-in user group.
KAIC07320-E	The specified storage system is not supported the DF series Performance retrieval function.	Check the specified Parameter, and then retry.
KAIC07321-E	The specified label (*label*) is invalid. Specify a label by using *maximum label length* bytes or less.	Revise the specified label, and then retry the operation.
KAIC07322-E	The specified label "*label*" is invalid because an empty string cannot be specified as a label.	Revise the label, and then try again.
KAIC07323-E	The specified label (*label*) is invalid. The label includes one or more invalid characters.	Revise the specified label, and then retry the operation. The following characters can be used for labels: `A-Z a-z 0-9 ~ ` ! @ # $`

Message ID	Message Text	Description
		% ^ & ( ) _ + - = { } [ ] ' . and spaces.
KAIC07324-E	The same LDEV is specified by more than one element.	Revise the LDEV specification, and then try again.
KAIC07325-E	The specified LDEV already has a label.	Revise the LDEV specification, and then try again.
KAIC07326-E	The targetID parameter of ObjectLabel is missing.	The targetID parameter of ObjectLabel is required. Specify the missing parameter, and then try again.
KAIC07327-E	The label parameter of ObjectLabel is missing.	The label parameter of ObjectLabel is required. Specify the missing parameter, and then try again.
KAIC07328-E	The specified LDEVs belong to more than one storage system.	Revise the LDEV specification, and then try again.
KAIC07329-E	Unable to change the user role. The specified user may be in an invalid state. Delete the user account, and then create it again.	Delete the user account, and then create it again.
KAIC07330-E	A parameter is invalid. The "groupName" attributes of the User element cannot be specified.	Revise the request, and then try again.
KAIC07331-E	The host storage domain (portID = "*port ID*", domainNickname = "*domain nickname*") cannot be found in the Device Manager database.	Revise the host storage domain specification.
KAIC07332-E	Invalid parameters: domainID and domainNickname cannot be specified at the same time.	Check and, if necessary, revise the parameters.
KAIC07333-E	Invalid parameters: domainNickname and WWN cannot be specified at the same time.	Check and, if necessary, revise the parameters.
KAIC07334-E	Invalid parameters: *parameter* and *parameter* cannot be specified at the same time. (element=*element*)	Check and, if necessary, revise the parameters.
KAIC07335-E	A required parameter is not specified. (element=*element*, parameter=*parameter*)	Check and, if necessary, revise the parameters.
KAIC07336-E	Invalid parameters were specified. The attribute "*parameter*" of the element "*element*" and element "*element*" cannot be specified at the same time.	Check and, if necessary, revise the parameters.

Message ID	Message Text	Description
KAIC07337-E	The command option *option-name* cannot be specified for hosts of the type *host-type*.	Revise the specified host.
KAIC07338-E	This operation cannot be performed because the specified pair belongs to a Consistency Group.	If you want to add a pair, select a different Snapshot Group. Otherwise, use the management tool that was used when adding the specified pair.
KAIC07340-E	The command cannot be executed because the specified LDEV "*Device number*" is part of a LUSE.	Revise the LDEV specification.
KAIC07341-E	In Device Manager, the volume (devNum = "*Device number*") used by *PP Name (Dynamic Provisioning)* cannot be resized.	Revise the LU specification.
KAIC07342-E	The specified capacity of LU "*Device number*" is invalid. Specify a capacity smaller than the current capacity.	Revise the capacity specification, and then re-execute the command.
KAIC07343-E	The drive type of the specified parity group"*Drive type*" differs from parity group"*Drive type*" to which DM-LU belongs.	Revise the parity group specification so that the number of drive types is less than one kind.
KAIC07344-E	The form factor of the specified parity group"*Form factor*" differs from parity group"*Form factor*" to which DM-LU belongs.	Revise the specification, and then try again.
KAIC07345-E	The DM-LU cannot expand.Extended to reach the maximum number of DM-LU.	Revise the specification, and then try again.
KAIC07346-E	The rpm of the specified parity group"*rpm*" differs from parity group"*rpm*" to which DM-LU belongs.	Revise the specification, and then try again.
KAIC07347-E	The DM-LU cannot be expanded. The encryption status of the specified parity group differs from the parity group to which the DM-LU belongs.	Revise the specified parity group, and then try again.
KAIC07348-E	This operation cannot be performed because the specified pair(P-VOL :*P-VOL Device number*, S-VOL :*S-VOL Device number*) does not belong to a Snapshot Group.	Specify a Snapshot Group.
KAIC07349-E	This command cannot be processed, because command device authentication mode is	Check the LU.

Message ID	Message Text	Description
	already enabled for the specified LU.	
KAIC07350-E	The LUSE Feature is not available for the storage system.	The storage system does not support LUSE functionality. Check the specified storage system.
KAIC07351-E	All the LDEVs that make up a LUSE must have the same "*attribute-name*". The requested "*attribute-name*" of the LDEVs is "*value1*" (devNum = "*Device number*") and "*value2*" (devNum = "*Device number*").	For the LDEVs that make up a LUSE, specify LDEVs that have the same "type".
KAIC07352-E	In this API version, LDEVs that constitute a LUSE cannot be specified in LUSE creation.	Check the Device Manager Server XML API manual and make sure that the running API version supports the command.
KAIC07353-E	The specified LDEV "*LDEV-identifier (devNum)*" is a reserved volume of *PP Name (VolumeMigration)*. This LDEV cannot be used in a LUSE.	Revise the specifications for the LDEVs that make up the LUSE, and then try again.
KAIC07354-E	The LDEV "*LDEV-identifier (devNum)*" currently exists as an LUN. This LDEV cannot be used in a LUSE.	Revise the specifications for the LDEVs that make up the LUSE.
KAIC07355-E	This command cannot be processed, because command device authentication mode is already disabled for the specified LU.	Check the LU.
KAIC07356-E	The number of LDEVs for the LUSE (devNum = "*Device number*") must be between "*minimum-number-of-LDEVs*" and "*maximum-number-of-LDEVs*".	Revise the specified number of LDEVs to be created for the LUSE.
KAIC07357-E	Response data not found for Transport Layer.	Contact the Support Center.
KAIC07358-E	The specified LDEV "*LDEV-identifier (devNum)*" is a RAID 0 LDEV. RAID 0 LDEVs cannot be used to create a LUSE.	Revise the specifications for the LDEVs that make up the LUSE.
KAIC07359-E	The microcode version of the storage system is insufficient for the requested LUSE operation. The microcode version is "*microcode-version*".	Check the version of the software contained in the storage system.
KAIC07360-E	The LUSE cannot be created because the specified LDEVs (devNum = "*Device number*" and	Check and, if necessary, revise the specifications of the LDEVs that make up the LUSE.

Message ID	Message Text	Description
	devNum = "*Device number*") have different default controllers.	
KAIC07361-E	For Device Manager, the LDEV "*devNum-of-LDEV*" must be the representative LDEV in LUSE operations using the microcode "*microcode-version*" of this storage system.	Revise the specifications for the LDEVs that make up the LUSE.
KAIC07362-E	The size of a created LUSE (devNum = "*Device number*") must be less than "*max-size-of-LUSE*TB". The specified size is "*size-of-LUSE*KB".	Check and, if necessary, revise the specifications of the LDEVs that make up the LUSE.
KAIC07363-E	A logical unit that has a LUSE defined cannot be deleted. The LUSE must be deleted before deleting the logical unit.	LUSE must be deleted before deleting LDEV.
KAIC07364-E	The LUSE cannot be created because the emulation type of a specified LDEV (devNum = "*Device number*") is not OPEN.	Check and, if necessary, revise the LDEV specification.
KAIC07365-E	An attempt to delete pairs has failed.	If this problem persists, contact the Support Center.
KAIC07366-E	The LUSE cannot be created because the drive types of the specified LDEVs (devNum = "*Device number*"and devNum = "*Device number*") are different.	Check and, if necessary, revise the specifications of the LDEVs.
KAIC07367-E	The specified LDEV "*Device number*" is being used for *PP Name (Dynamic Provisioning)*, and cannot be used for a LUSE.	Revise the LDEV specification.
KAIC07368-E	The LUSE cannot be created. The specified LDEVs (devNum = "*Device number*" and devNum = "*Device number*") belong to parity groups of different form factors. Create a LUSE by using LDEVs whose parity groups are the same form factor.	Specify the LDEVs again, verifying that the LDEVs to be combined belong to parity groups of the same form factor.
KAIC07369-E	The specified snapshot group name is not displayed because it was not found in the Device Manager database, or it does not belong to a pair managed by the specified host.	Revise the settings of the snapshot group, and then try again, or use the `GetStorageArray` command to get the snapshot group information.
KAIC07370-E	The specified storage system ("*array-type*", "*serial-number (Secret)*") is not an object of Device Manager management.	This is an information message only. No additional action is required.

	acquire information to access the host agent has failed.	
KAIC07453-E	An internal server error was encountered. An error occurred during the search for host agent(s) that will be accessed. Port "*port-number*" does not exist.	Contact the Support Center.
KAIC07454-E	An internal error occurred.	Contact the Support Center.
KAIC07455-E	Execution of the request failed. To specify multiple pairs, you must specify all pair volumes for a single instance either by virtual IDs or by physical IDs. (instance number "*instance-number*" on host "*host-name*")	Check and, if necessary, revise the parameter specified when the copy pair was created. Use a single instance for virtual IDs only, and another instance for physical IDs only. Then use one of the following methods when specifying the parameter: • For a single instance, specify all pair volumes by using virtual IDs. • For a single instance, specify all pair volumes by using physical IDs.
KAIC07456-E	An attempt to operate "*open-or-close*" on host agent server "*URL-of-host-agent*" has failed. The response from the host agent was "*response-from-host-agent*".	Confirm the status of host agent. If there are no problems with the host agent, contact the Support Center.
KAIC07457-E	An error occurred during communicating with the host agent "*URL-of-host-agent*".	Check the host agent and the status of the network connection between Device Manager Server and host agent. If this problem persists, contact the Support Center.
KAIC07458-E	An internal server error was encountered. An attempt to create a request to the host agent has failed. The POST request of HTTP cannot be performed.	Contact the Support Center.
KAIC07459-E	An attempt to resolve the IP address of host agent Server has failed.	Check that the IP address of host agent is valid.
KAIC07460-E	The accessed host "*host-name*" is different from the host "*host-name*" registered in Device Manager.	Check that the host name and the IP address of the host agent in Device Manager are valid.
KAIC07461-E	An attempt to execute a request for the host agent has failed. (error details = "*error-message*")	Check the host agent and the status of the network connection between Device Manager Server and host agent. If this problem

Message ID	Message Text	Description
		persists, contact the Support Center.
KAIC07462-E	The version of the host agent on host "*host-name*" is "*installed-version-host-agent*". However, version "*required-version*" or later of the host agent is required to execute the service.	Check the host agent on the host.
KAIC07463-E	The Data Placement Profile cannot be executed because the volume configuration (DevNum = *DevNum*) has changed. Update the Data Placement Profile.	Update the Data Placement Profile.
KAIC07464-E	The Data Placement Profile (*Data-Placement-Profile-name*) is in a state that prevents execution of the specified operation. Check the status of the Data Placement Profile.	Check the status of the Data Placement Profile.
KAIC07465-E	An operation using the Data Placement Profile (*Data-Placement-Profile-name*) is being executed. After the operation finishes, try again.	After the operation being executed finishes, try again.
KAIC07466-E	An unexpected error occurred while executing a Data Placement Profile operation.	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC07467-E	The storage system (*storage-system-name*) containing the specified volume does not support data placement profile operations. Check the storage system type and microcode version.	Check the storage system type and microcode version.
KAIC07468-E	Execution of the request failed. The pair operation for which physical IDs were specified cannot be performed, because HORCM_VCMD is defined in the specified configuration file. (instance number "*instance-number*" on host "*host-name*")	For a configuration file in which HORCM_VCMD is defined, you cannot define a volume that is not on a virtual storage machine.
KAIC07469-E	Execution of the request failed. The pair operation for which virtual IDs were specified cannot be performed, because HORCM_VCMD is not defined in the specified configuration file.	For a configuration file in which HORCM_VCMD is not defined, you cannot define a volume that is on a virtual storage machine.

Message ID	Message Text	Description
	(instance number "*instance-number*" on host "*host-name*")	
KAIC07470-E	An attempt to execute the request has failed. Execute the request again.	If this problem persists, contact the Support Center.
KAIC07471-E	An attempt to update the information for the displayed list has failed.	If this problem persists, contact the Support Center.
KAIC07472-E	The storage system information ("*storage system-name*") is inconsistent. Refresh the storage system, and then try again.	Refresh the storage system, and then try again.
KAIC07473-E	The storage system information ("*storage system-name*") is being updated. Wait a while, and then perform the operation again.	Wait a while, and then perform the operation again.
KAIC07474-E	The value of the "*attribute-name*" parameter is outside the valid range from "*minimum-value*" to "*maximum-value*".	Specify a valid value.
KAIC07475-E	The sum of startElementNum and numOfElements is outside the valid range from "*minimum-value*" to "*maximum-value*".	Specify a valid value.
KAIC07476-E	The "*attribute-name*" parameter is missing in the requested "*element-name*" element.	Check whether the requested element has all the necessary parameters. If there are any missing parameters, specify them and then re-execute the command.
KAIC07477-E	Memory for the Device Manager server became insufficient while this operation was being performed.	If the command you executed is Add, Modify, or Delete, take the following action: (1) Use the following procedure to check the status of the operation: 1. Increase the memory heap size for the Device Manager server. 2. If the command was executed for a storage system or host, refresh the information of the storage system or host. 3. Check the status of the operation. (2) If necessary, perform the operation again. If the command you executed is Get, take the following action:

Message ID	Message Text	Description
		(1) Use the following procedure to perform the operation again: 1. Restart the Device Manager server. 2. Do either of the following: - Increase the memory heap size for the Device Manager server, and then perform the operation again. - Reduce the amount of information to be collected, and then perform the operation again.
KAIC07478-E	An internal error occurred while registering a temporary user for the storage system.	Contact the Support Center.
KAIC07479-E	The value of Over Provisioning Percent Alert Notice is outside the valid range from "*minimum-value*" to "*maximum-value*".	Specify a valid value.
KAIC07480-E	ISCSINames cannot be added to a mainframe host.	Revise the host specification.
KAIC07481-E	The specified ISCSIName "*ISCSIName*" is invalid because it exceeds the maximum length *maximum-length-of-ISCSIName* bytes.	Revise the specified ISCSIName, and then retry the operation.
KAIC07482-E	The specified ISCSIName "*ISCSIName*" is invalid because it contains an invalid character.	Revise the specified iSCSI name, and then retry the operation.
KAIC07483-E	The portWWN and portISCSIName parameters are both specified in the request.	Specify either the portWWN or the portISCSIName parameter, but not both.
KAIC07484-E	An iSCSI name cannot be specified because the host storage domain is associated with a Fibre Channel or FCoE port.	Specify a host storage domain associated with an iSCSI port.
KAIC07485-E	The specified ISCSIName is invalid.	Revise the request, and then retry the operation.
KAIC07486-E	A WWN cannot be specified because the host storage domain is associated with an iSCSI port.	Specify a host storage domain associated with a Fibre Channel or FCoE port.
KAIC07487-E	The specified domain type "*domain-type*" is invalid.	Revise the domain type specification.
KAIC07488-E	ISCSINames are invalid on this storage system.	Revise the storage system specification.

Message ID	Message Text	Description
KAIC07489-E	The following parameter is not specified: ISCSIName "iSCSIName".	Specify the ISCSIName, and then retry the operation.
KAIC07490-E	The ISCSIName "*ISCSIName*" does not exist in the Device Manager database.	Revise the request, and then retry the operation.
KAIC07491-E	The specified ISCSIName "*ISCSIName*" cannot be used because it is already being used for another ISCSIName on the same HostStorageDomain.	Specify an ISCSIName that is not already being used on the same HostStorageDomain, and then retry the operation.
KAIC07492-E	The Fibre Channel port attribute and the iSCSI port attribute cannot be specified at the same time.	Revise the request, and then retry the operation.
KAIC07493-E	iSCSI port attributes cannot be specified for Fibre Channel or FCoE ports.	Specify Fibre Channel or FCoE port attributes.
KAIC07494-E	The Fibre Channel port attribute cannot be specified for an iSCSI port.	Revise the request, and then retry the operation.
KAIC07495-E	The port must be Fibre Channel or FCoE.	Specify a Fibre Channel or FCoE port.
KAIC07496-E	The ISCSIName of the specified host "*host-name*" cannot be changed because the host is on an external port.	Revise the host specification.
KAIC07497-E	The specified nickname "*nickname*" is invalid for the specified ISCSIName "*ISCSIName*".	Revise the request, and then retry the operation.
KAIC07498-E	The ISCSIName "*ISCSIName*" is already being used by the host "*host-name*".	Revise the ISCSIName specification.
KAIC07499-E	The host "*host-name*" cannot be deleted because it includes an ISCSIName used for an LUN.	Delete the LUN security, and then delete the host.
KAIC07500-E	You cannot perform operations on the specified snapshot group at the snapshot-group level because it contains one or more pairs for which no secondary volume is assigned. Specify primary and secondary volumes to perform operations at the pair level.	Specify primary and secondary volumes to perform operations at the pair level. To perform operations on pairs for which no secondary volume is assigned, use the storage system management tool.
KAIC07501-E	An error occurred while the fabric information was being acquired.	Contact the Support Center.

Message ID	Message Text	Description
KAIC07502-E	An error occurred while the fabric information was being acquired.	Contact the Support Center.
KAIC07503-E	Only one instance of this command can be executed at one time.	Wait a while, and then try again.
KAIC07504-E	The LUN Management option of the specified storage system is not enabled.	Check the option list of the storage system.
KAIC07505-E	The host information in the Device Manager database has been updated. Other update processing might have been executed while Host Scan was executing.	Make sure that other update processing is not executing, and then retry Host Scan. If this problem persists, contact the Support Center.
KAIC07506-E	Host Scan was not executed because no target storage system was found.	This is an informational message only. No additional action is required.
KAIC07507-E	The host information in the Device Manager database has been updated. Other update processing might have been executed while hosts were being merged.	Make sure that no other update processing is being executed, and then try to merge the hosts again. If this problem persists, contact the Support Center.
KAIC07508-E	The request cannot be executed. Multiple pairs for one P-VOL of "*PP-Name*" must use the same pool.	Revise the request and retry. Specify the same pool ID.
KAIC07509-E	A required parameter is not specified. To execute this command, the parameters required to set up the DM-LU or the command device must be specified.	Specify the required parameters, and then try again.
KAIC07510-E	The configuration of purchasable optional features on the storage system might have changed.	Refresh the storage system, and then try again.
KAIC07511-E	No more users can be registered because the maximum number of users has already been registered in the specified storage system.	Delete unnecessary users from the storage system, and then retry the operation.
KAIC07512-E	A user ID that is the same as the temporary user ID is already registered in the storage system.	Delete the already registered user ID from the storage system, and then retry the operation.
KAIC07513-E	The *element-name* (*attribute-name*="*attribute-value*") is specified more than once.	Revise the *element-name* specification.
KAIC07514-E	The poolID "*poolID*" is already being used in the storage system.	Revise the poolID specification, and then retry the operation.

Message ID	Message Text	Description
KAIC07515-E	The *element-name* (*attribute-name*="*attribute-value*") was not found in the Device Manager database.	Revise the *element-name* specification.
KAIC07516-E	The specified operation cannot be executed because the value of the attribute *attribute-name* (*attribute-value*) is the value of the attribute *attribute-name* (*attribute-value*) or more.	Revise the *attribute-name* and *attribute-name* specifications, and then retry the operation.
KAIC07517-E	The *element-name* specification is invalid. The drive types of all *element-name*s in one pool must be the same.	Revise the *element-name* specification, and then retry the operation.
KAIC07518-E	The specified operation cannot be executed because the status of the *element-name* (*attribute-name*="*attribute-value*") is *status*.	Recover the status of *element-name*, and then retry the operation.
KAIC07519-E	The capacity "*capacity*" is invalid. Specify a value from *minimum-value* to *maximum-value*.	Revise the capacity specification, and then retry the operation.
KAIC07520-E	The specified operation cannot be executed for an array group that consists of *PP-Name* pool.	Revise the array group specification.
KAIC07521-E	The RAID level "*RAID-level*" cannot be specified for this operation.	Revise the RAID level specification, and then retry the operation.
KAIC07522-E	The combination of RAID level and the number of PDEVs is invalid.	Revise the RAID level and the number of PDEVs, and then retry the operation.
KAIC07523-E	The selected number of PDEVs does not match the pool combination (function="*PP-name*", poolID = "*poolID*").	Revise the PDEV specification, and then retry the operation.
KAIC07524-E	The command option "*option-name*" has not been specified.	Specify the command option "*option-name*".
KAIC07525-E	The specified command option "*option-name*" is invalid.	Check and, if necessary, specify a different command option, and then retry the operation.
KAIC07526-E	The specified capacity of *element-name* (*attribute-name*="*attribute-value*") is invalid. Specify the capacity more than the current capacity.	Check and, if necessary, specify a different capacity, and then retry the operation.
KAIC07527-E	The specified operation cannot be executed because the pool (pool ID="*pool-ID*") is blocked.	Unblock the pool, and then retry the operation.

Message ID	Message Text	Description
KAIC07528-E	"*option-name*" has not been specified for command option 2.	Specify "*option-name*" for command option 2.
KAIC07529-E	The specified operation cannot be executed because status in pool (poolID="*pool-ID*") is not "Normal".	Recover from the pool status, and then retry the operation.
KAIC07530-E	The Over Provisioning Warning Threshold is outside the valid range. The valid range is from *minimum-value* to *maximum-value*.	Revise the Over Provisioning Warning Threshold, and then try again.
KAIC07531-E	The Over Provisioning Limit Threshold is outside the valid range. The valid range is from *minimum-value* to *maximum-value*.	Revise the Over Provisioning Limit Threshold, and then try again.
KAIC07532-E	The Over Provisioning Percent of the specified pool "*pool-ID*" has already exceeded the Over Provisioning Limit Threshold.	Revise the pool specification, and then retry the operation.
KAIC07533-E	Upon executing this command, the Over Provisioning Percent of the specified pool "*pool-ID*" will exceed the Over Provisioning Limit Threshold.	Revise the size and number of virtual volumes that will be created or changed, and then retry the operation.
KAIC07534-E	The specified operation cannot be executed because the Over Provisioning Warning Threshold (*attribute-value*) is greater than or equal to the Over Provisioning Limit Threshold (*attribute-value*).	Revise the Over Provisioning Warning Threshold and the Over Provisioning Limit Threshold, and then try again.
KAIC07535-E	"*option*" cannot be specified as a command option.	Revise the command options, and then execute the command again.
KAIC07536-E	This operation cannot be performed because the storage system has not been refreshed.	Refresh the storage system. If this error continues, contact Support.
KAIC07537-E	The drive type and form factor of all PDEVs in a pool must be the same.	Revise the PDEV specification and match the API version to the Device Manager server version. If this error continues, contact Support.
KAIC07538-E	The specified drive type (*Drive type,*) and form factor (*Form factor*) combination is not valid.	Revise the drive type and form factor specifications.
KAIC07539-E	The specified PDEVs are not valid. The drive type and form factor of all PDEVs in the array group must be the same.	Revise the PDEV information to have the same drive type and form factor. In addition, verify that the API version matches the Device Manager server version. If

Message ID	Message Text	Description
		this problem continues, contact Support.
KAIC07540-E	A host is already registered with IP address "*specified IP address*".	Verify the IP address.
KAIC07541-E	The specified Host Data Collector is not registered.	Revise the Host Data Collector specification, and then try again.
KAIC07542-E	A Host Data Collector is already registered with IP address "*specified IP address*".	Verify the IP address.
KAIC07543-E	The Host Data Collector is not registered.	Register the Host Data Collector.
KAIC07544-E	A host with the name "*host name*" is already registered.	Revise the host name.
KAIC07545-E	Host synchronization parameters sent from another product are not supported. Revise the parameters needed for adding and refreshing hosts and then refresh the host.	Revise the parameters and refresh the hosts.
KAIC07546-E	The specified drive (*drive-number*) cannot be used. (role="*role*")	Revise the drive specification.
KAIC07547-E	The Replication Depletion Alert Threshold is exceeded. The valid range is from *minimum-value* to *maximum-value*.	Revise the Replication Depletion Alert Threshold.
KAIC07548-E	The Replication Data Release Threshold is exceeded. The valid range is from *minimum-value* to *maximum-value*.	Revise the Replication Data Release Threshold.
KAIC07549-E	The Replication Depletion Alert Threshold (*attribute-value*) is greater than or equal to the Replication Data Release Threshold (*attribute-value*).	The difference of the Replication Depletion Alert Threshold and the Replication Data Release Threshold must be more than or equal to 6%. Also, the Replication Data Released threshold should be greater than the Replication Deletion Alert Threshold. Revise the specification, and then try again.
KAIC07550-E	The specified IPAddress "*IPAddress*" cannot be used because it is already being used by another port.	Specify an IPAddress that is not being used by another port, and then retry the operation.
KAIC07551-E	The format of the specified IPAddress "*IPAddress*" is invalid.	Specify the IPAddress by using a valid format.
KAIC07552-E	The format of the specified SubnetMask "*SubnetMask*" is invalid.	Specify the SubnetMask by using a valid format.

Message ID	Message Text	Description
KAIC07553-E	The format of the specified DefaultGateway "*DefaultGateway*" is invalid.	Specify the DefaultGateway by using a valid format.
KAIC07554-E	The PortNumber specified for the port is invalid.	Specify a valid PortNumber.
KAIC07555-E	The keepAliveTime specified for the port is invalid.	Specify a valid keepAliveTime.
KAIC07556-E	The specified ISCSIName "*ISCSIName*" cannot be used because it is already being used by another HostStorageDomain on the same port.	Specify an ISCSIName that is not being used by another HostStorageDomains on the same port, and then retry the operation.
KAIC07557-E	The maximum number of ISCSINames ("*maximum-number-of-ISCSINames*") has been exceeded.	No more ISCSINames can be added to the specified port. Delete any unnecessary ISCSINames, and then retry the operation.
KAIC07558-E	The specified nickname "*nickname*" cannot be used because it is already being used by another ISCSIName on the same port.	Specify a nickname that is not being used by another ISCSIName on the same port, and then retry the operation.
KAIC07559-E	Device Manager does not support operations on this storage system. The minimum microcode version is "*version*".	To perform this operation, the microcode version must be updated.
KAIC07560-E	The iSCSI attribute cannot be specified for the Fibre Channel HostInfo.	Revise the request, and then retry the operation.
KAIC07561-E	The Fibre Channel attribute cannot be specified for the iSCSI HostInfo.	Revise the request, and then retry the operation.
KAIC07562-E	The Replication Depletion Alert and Replication Data Release Thresholds cannot be specified for the microcode version of this storage system.	Verify the microcode version of the storage system.
KAIC07563-E	A different value is specified for "pvolPoolID" and "pvolMngAreaPoolID".	Revise the request.
KAIC07564-E	The specified LogicalUnit is already associated with another pool(poolID = "*poolID*").	Verify the pvolPoolID.
KAIC07565-E	An attempt to execute the request has failed. There are no pools in the specified device.	Create a pool, and then try again.

Message ID	Message Text	Description
KAIC07566-E	A different value is specified for "svolPoolID" and "svolMngAreaPoolID".	Revise the request.
KAIC07567-E	The specified operation cannot be executed because the usage rate of the pool (poolID="*poolID*", usage= "*pool-usage-rate*") is the pool threshold (*attribute-name*="*attribute-value*") or more.	Revise the configuration so that the pool usage rate is less than the value of *attribute-name*, and then retry the operation.
KAIC07568-E	This command cannot be processed, because device group definition is already disabled for the specified LU.	Revise the device group definition.
KAIC07569-E	This operation cannot be performed because Device Manager does not support the settings or configuration of the specified pool.	The cause of the problem might be one of the following: • If the depletion threshold is set, the threshold cannot be changed. • If the pool volumes have differing drive types or speeds, the pool cannot be deleted, expanded, or shrunk. • If the pool have RAID level or HDU combination mixed, the pool cannot expanded. • In cases other than the above, the storage system information might be incomplete. Refresh the storage system, and then retry the operation.
KAIC07570-E	The LU "*device number*" cannot be used for a pool volume/journal volume because it is an OnDemand device.	Revise the LU specification, and then try again.
KAIC07571-E	The drive type of all LUs that make up the specified pool must be same.	Revise the drive types of pool volumes, and then try again.
KAIC07572-E	A pool cannot be deleted because one or more V-VOLs exist.	Delete all V-VOLs used by the specified pool, and then try again.
KAIC07573-E	The pool volumes of specified pool cannot be deleted.	Check the storage system functionality.
KAIC07574-E	A journal group cannot be changed or deleted, because it is used by Universal Replicator for Mainframe.	Specify a journal group that is not used by Universal Replicator for Mainframe, and then try again.
KAIC07575-E	The specified LU is not a volume of the specified journal group.	Revise the LU specification, and then try again.

Message ID	Message Text	Description
KAIC07576-E	"*device number*" is an external volume and cannot be used as a pool volume for a "*PP Name (Dynamic Tiering)*" pool.	Specify another volume.
KAIC07577-E	"Data Overflow Watch Time" could not be set, because the value for Inflow Control is "No".	Revise the journal group options, and then try again.
KAIC07578-E	The combination of values specified for "Path Watch Time" and "Unit of Path Watch Time" is invalid.	Revise the values of "Unit of Path Watch Time" and "Path Watch Time", and then try again.
KAIC07579-E	A journal volume cannot be deleted when the delta of the master journal group is "Hold".	Change the status of the pairs that use the journal group, and then retry the operation.
KAIC07580-E	The tier management setting cannot be changed for the specified pool because the pool contains pool volumes that have different drive type or speeds.	Make sure all pool volumes have the same drive type and speed, and then retry the operation.
KAIC07581-E	The LU "*device number*" cannot be used as a pool volume/journal volume because the I/O suppression mode is active.	Revise the LU specification, and then try again.
KAIC07582-E	The LU "*device number*" cannot be used as a pool volume/journal volume because it is a system volume.	Revise the LU specification, and then try again.
KAIC07583-E	Journal volumes cannot be emptied during journal volume deletion.	Revise the LU specification, and then retry the operation.
KAIC07584-E	The specified journal group ID "*journal group ID*" is already used on the storage system by *PP Name (Universal Replicator)*.	Revise the journal group ID specification, and then try again.
KAIC07585-E	Operations cannot be performed for the specified journal group because it does not have any volumes.	Revise the journal group ID specification, and then try again.
KAIC07586-E	The specified pool ID "*poolID*" is an invalid value. The pool ID must be "*value 1*" or "*value 2*".	Revise the pool ID specification, and then try again.
KAIC07587-E	The tier management setting cannot be changed for the specified pool because one or more of the pool volumes is an external volume.	Change the configuration of the specified pool so that its pool volumes do not include any external volumes, and then retry the operation.
KAIC07588-E	When modifying a journal group, you must specify one of the following: a journal group option,	Revise the request, and then retry the operation.

Message ID	Message Text	Description
	a mirror option, or an LU to be modified.	
KAIC07589-E	The specified pool/journal group cannot be added in this API version.	Make sure that the operation is supported in the specified API version.
KAIC07590-E	The specified pool/journal group cannot be deleted in this API version.	Make sure that the operation is supported in the specified API version.
KAIC07591-E	The specified pool/journal group cannot be modified in this API version.	Make sure that the operation is supported in the specified API version.
KAIC07592-E	A parameter is invalid. If you specify "Path Watch Time" or "Unit of Path Watch Time", you must specify both of them at the same time.	Specify both "Path Watch Time" and "Unit of Path Watch Time".
KAIC07593-E	The specified pool is invalid.	Revise the pool ID specification, and then try again.
KAIC07594-E	A pool was not expanded and its attributes were not changed because an LU for expanding the pool or pool attributes were not specified.	Specify an LU for expanding the pool or pool attributes, and then retry the operation.
KAIC07595-E	An attempt to execute the request has failed. The emulation types of the specified volumes are a combination of "*emulation type1*" and "*emulation type2*".	For the source and target volumes, specify volumes that have the same emulation type.
KAIC07596-E	The storage system information ("*storage-system-name*") is incomplete. Refresh the storage system, and then try again.	Refresh the storage system, and then try again.
KAIC07597-E	A pool cannot be created because the drive type and speed of the specified LUs are the same but their RAID levels are different.	When creating a pool whose LUs have the same drive type and speed, the RAID level of all LUs must be the same.
KAIC07598-E	More than 3 combinations of drive type and speed are specified for the pool volumes.	Specify no more than 3 combinations of drive type and speed for the pool volumes, and then try again.
KAIC07599-E	The drive type or speed of the LU "*device-number*" excludes it from being used as a pool volume.	Check the LU drive type and speed, specify an LU that satisfies the requirements, and then try again.
KAIC07600-E	The "*microcode-version*" microcode version of the storage system cannot be used for the "*PP Name (Dynamic Provisioning)*" configuration.	Make sure the microcode version of the storage system is correct.

Message ID	Message Text	Description
KAIC07601-E	Device Manager does not support the "*operation*" operation except for the "*PP Name (Dynamic Provisioning)*" function.	Revise the function type, and then retry the operation.
KAIC07602-E	The LU cannot be used for a pool volume because the capacity of the LU "*device-number*" is outside the valid range. The capacity of a pool volume must be "*minimum-value(KB)*KB(*minimum-value(LBA)*LBA)" or more.	Revise the LU specification, and then retry the operation.
KAIC07603-E	The LU "*device-number*" cannot be used for a pool volume/journal volume because the LU is a LUSE devise.	Revise the LU specification, and then retry the operation.
KAIC07604-E	The LU "*device-number*" cannot be used for a pool volume/journal volume because the LU has a path set.	Revise the LU specification, and then retry the operation.
KAIC07605-E	The LU "*device-number*" cannot be used for a pool volume/journal volume because it is a reserved volume of "*PP Name (Volume Migration)*".	Revise the LU specification, and then retry the operation.
KAIC07606-E	The LU "*device-number*" cannot be used for a pool volume/journal volume because it is a "*volume-attribute*" of "*PP Name*".	Revise the LU specification, and then retry the operation.
KAIC07607-E	The LDEV "*device-number*" cannot be used for a pool volume/journal volume because its status is not "Normal".	Check the status of the LDEV, and then retry the operation.
KAIC07608-E	The LDEV "*device-number*" cannot be used for a pool volume/journal volume because it is protected.	Revise the LU specification, and then retry the operation.
KAIC07609-E	All LDEVs that make up a pool/journal group for "*PP Name (Dynamic Provisioning)*" must have the same CLPR.	Revise the LU specification, and then retry the operation.
KAIC07610-E	LU "*device-number*", whose emulation type is "*emulation-type*", cannot be used for a pool volume/journal volume of "*PP Name (Dynamic Provisioning)*".	Revise the LU specification, and then retry the operation.
KAIC07611-E	The LU "*device-number*" cannot be used for a pool volume/journal volume because it is a command devise.	Revise the LU specification, and then retry the operation.

Message ID	Message Text	Description
KAIC07612-E	The LU "*device-number*" cannot be used for a pool volume/journal volume because it is set for "*PP Name (Cache Residency)*".	Revise the LU specification, and then retry the operation.
KAIC07613-E	The pool volume/journal volume cannot be added because the number of LUs will exceed the maximum number of pool volume/journal volume that make up a pool for "*PP Name (Dynamic Provisioning)*".	Reduce the number of specified LUs, and then retry the operation.
KAIC07614-E	The specified threshold "*threshold*" is invalid.	Specify a valid value, and then retry the operation.
KAIC07615-E	The specified pool ID "*poolID*" is already being used on the storage system, for "*PP Name (Quick Shadow)*" or "*PP Name (Dynamic Provisioning)*".	Revise the pool ID specification, and then retry the operation.
KAIC07616-E	The specified pool ID/journal group ID "*poolID/journal group ID*" is invalid. A pool ID /journal group ID must be in the range from "*minimum-value*" to "*maximum-value*".	Revise the pool ID/journal group ID specification, and then retry the operation.
KAIC07617-E	A pool cannot be created because the RAID level of the LUs specified to make up the pool are different.	Specify LUs that have the same RAID level, and then try again.
KAIC07618-E	The specified pool cannot be deleted because an LU is assigned to it.	Remove any assigned LUs from the pool, and then retry.
KAIC07619-E	Cannot create pool because the volume drive speed (RPM) is different.	Use volumes with the same drive speed (RPM).
KAIC07620-E	The LU "*device-number*" is already assigned to a pool.	Revise the LU specification, and then retry the operation.
KAIC07621-E	"*volume-attribute*" and the pool must have the same CLPR.	Revise the pool and volume combination, and then retry the operation.
KAIC07622-E	An attempt to execute the request failed because the LU "*device-number*" is unassigned to pool.	Revise the LU specification, and then retry the operation.
KAIC07623-E	The LU "*device-number*" cannot be released from the pool because the LU has a path.	Release any paths for the LU, and then retry the operation.
KAIC07624-E	The LU "*device-number*" cannot be released from the pool because the LU is a LUSE volume.	Release the LUSE, and then retry the operation.

Message ID	Message Text	Description
KAIC07625-E	The array group (chassis="*chassis*" number="*array-group-number*") already exists in the storage system.	Revise the request, and then retry the operation.
KAIC07626-E	The specified device number "*device-number*" is already in use.	Revise the device number specification, and then retry the operation.
KAIC07627-E	The LDEV cannot be added, because the number of LDEVs will exceed the maximum number of LDEVs in the array group.	Reduce the number of specified volumes, and then retry the operation.
KAIC07628-E	A pool cannot be created or modified because the specified monitoring start time "*monitoring start time*" and end time "*monitoring end time*" are not valid. Either the interval between the times is less than 1 hour, or the start time is later than the end time. Note that the monitoring period cannot span multiple days.	Specify a start time that is at least 1 hour earlier than the end time.
KAIC07629-E	An LU whose emulation type is "*emulation-type*" cannot be added to "*PP Name (Dynamic Provisioning)*".	Correct the specified emulation type, and then retry the operation.
KAIC07630-E	The specified array group was not found in the Device Manager database.	Revise the array group specification, and then retry the operation.
KAIC07631-E	The specified array group (chassis="*chassis*" number="*array-group-number*") cannot be deleted because it contains at least one LDEV that is assigned to a pool.	Specify the option "`force`", and then retry the operation.
KAIC07632-E	The specified array group (chassis="*chassis*" number="*array-group-number*") cannot be deleted because it contains at least one LU that has a path.	Release the paths set for the LU, and then retry the operation.
KAIC07633-E	The specified array group (chassis="*chassis*" number="*array-group-number*") cannot be deleted because it contains a LUSE volume.	Release the LUSE, and then retry the operation.
KAIC07634-E	The specified array group (chassis="*chassis*" number="*array-group-number*") cannot be deleted because it	Revise the array group specification, and then retry the operation.

Message ID	Message Text	Description
	contains at least one protected LDEV.	
KAIC07635-E	The specified device number "*device-number*" is invalid.	Specify another device number, and then retry the operation.
KAIC07636-E	The LU "*device-number*" cannot be deleted because it is assigned to a pool.	Specify the option "`force`", and then retry the operation.
KAIC07637-E	The LU "*device-number*" cannot be deleted because it has a path.	Release the paths set for the LU, and then retry the operation.
KAIC07638-E	The LU "*device-number*" cannot be deleted because it is a LUSE volume.	Release the LUSE, and then retry the operation.
KAIC07639-E	The LU "*device-number*" cannot be deleted because it is protected.	Revise the LU specification, and then retry the operation.
KAIC07640-E	A parameter is not specified : LU "emulation"	Specify the LU emulation type.
KAIC07641-E	A parameter is not specified : LU "dpPoolID"	Specify the pool ID.
KAIC07642-E	A parameter is not specified : LU "threshold"	Specify the LU threshold.
KAIC07643-E	All LUs that make up a pool for "*PP Name (Dynamic Provisioning)*" must have the same volume classes (internal or external).	Revise the LU specification, and then retry the operation.
KAIC07644-E	All LUs that make up a pool for "*PP Name (Dynamic Provisioning)*" must have the same cache mode.	Revise the LU specification, and then retry the operation.
KAIC07645-E	Cannot create or expand pool because LU "*device-number*" LDEV status is not "Normal" or "Quick Formatting".	Specify an LU whose LDEV status is "Normal" or "Quick Formatting".
KAIC07646-E	This command cannot be processed, because device group definition is already enabled for the specified LU.	Revise the device group definition.
KAIC07647-E	The objectID of the array group is not specified. If you specify "exist" option, you must also specify the objectID of the array group.	Specify the objectID of the array group, and then retry the operation.
KAIC07648-E	The specified array group (chassis="*chassis*" number="*array-group-number*") is not used for "*PP Name (Dynamic Provisioning)*".	Specify an array group that is used for "*PP Name (Dynamic Provisioning)*".

Message ID	Message Text	Description
KAIC07649-E	Specified LU (devNum="*device-number*") is not "*volume-attribute*" of "*PP Name*".	Specify *volume-attribute* of *PP Name*.
KAIC07650-E	An error occurred in Provisioning Manager Server. (Message ID:*Message-ID*)	Refer to the Provisioning Manager Server log.
KAIC07651-E	An error occurred when Provisioning Manager Server was invoked.	Refer to the Provisioning Manager Server log.
KAIC07652-E	One of the specified logical groups or one of the logical groups below it, cannot be used to perform operations.	Use the GUI to perform logical group operations.
KAIC07653-E	Because the specified logical group has a child group, the object cannot be added.	Specify a logical group without a child group.
KAIC07654-E	The specified buffer space for new page assignment (tier *tier*) is outside the valid range. The valid range is from "*minimum-value*" through "*maximum-value*".	Revise the specified buffer space for new page assignment, and then retry the operation.
KAIC07655-E	The specified buffer space for tier relocation (tier *tier*) is outside the valid range. The valid range is from "*minimum-value*" through "*maximum-value*".	Revise the specified buffer space for tier relocation, and then retry the operation.
KAIC07656-E	The number of values specified for the buffer space for new page assignment is different from the number of tiers in the pool.	Revise the values specified for the buffer space for new page assignment or the number of tiers in the pool, and then retry the operation.
KAIC07657-E	The number of values specified for the buffer space for tier relocation is different from the number of the tiers in the pool.	Revise the values specified for the buffer space for tier relocation or the number of tiers in the pool, and then retry the operation.
KAIC07658-E	The specified tier (tier *tier*) does not exist.	Revise the number of tiers for the specified pool, and then retry the operation.
KAIC07659-E	The tier *tier* cannot be specified because the number of creatable tiers will be exceeded.	Revise the number of tiers for the specified pool, and then retry the operation.
KAIC07664-E	The virtualization-server management program (IP address =) could not be updated because Host Data Collector information has changed. Add the virtualization-server management program again to Device Manager.	Add the virtualization-server management program again to Device Manager.

Message ID	Message Text	Description
KAIC07665-E	The specified Host Data Collector does not support the target host. (host name or IP address = *host-name-or-IP-address*, Host Data Collector host name or IP address = *Host-Data-Collector-host-name-or-IP-address*)	Specify a different Host Data Collector, and then try again.
KAIC07666-E	Host Data Collector does not support version *host-version* target hosts. (host name or IP address = *host-name-or-IP-address*, Host Data Collector host name or IP address = *Host-Data-Collector-host-name-or-IP-address*)	Do not use Host Data Collector to perform operations on the target hosts.
KAIC07667-E	An attempt to add or refresh a host failed because of one of the following reasons: the UUID of the virtualized host server is different from the UUID of Device Manager, or the data collected from Host Data Collector is invalid. If an attempt to refresh the host failed, try to re-add the server. If this problem persists, detailed investigation is required to find the cause and resolve the problem. Contact the Support Center, who may ask you to collect troubleshooting information. (host name or IP address = *target-host-name-or-IP-address*, Host Data Collector information: host name or IP address = *Host-Data-Collector-host-name-or-IP-address*, RMI registry port number = *Host-Data-Collector-RMI-registry-port-number*, RMI server port number = *Host-Data-Collector-RMI-server-port-number*, class loader port number = *Host-Data-Collector-class-loader-port-number*)	Check the following points: • The OS version on the target host (*) • The IP address of the target host is correct. • The authentication information and user permissions are correct. • The firewall is set to allow communication between the Host Data Collector and the target host. • The target host can be accessed by using the specified protocol. • The target host has been started. • The OS of the target host is supported. (*) Depending on the version of the target host (a virtualization server), the UUID of the virtualization server acquired from the Host Data Controller might be incorrect. If this message is displayed after upgrading the virtualization server, from Device Manager delete the virtualization server that could not be added and then try to add the server again. In addition, verify that the target host environment is set up correctly, as described in the "*Hitachi Command Suite Administrator Guide*." If this problem persists, detailed investigation is required to find

Message ID	Message Text	Description
		the cause and resolve the problem. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC07668-E	The specified *element-name* ("*attribute-name*") is already in use.	Revise the specified *element-name*, and then retry the operation.
KAIC07669-E	An internal error occurred while setting the buffer space for new page assignment or the buffer space for tier relocation.	If this problem persists, contact the Support Center.
KAIC07678-E	An attempt to connect to VMware vCenter Server failed.	Take the following actions: • Confirm that VMware ESX Server and the VMware vCenter Server service are running. • Restart VMware vSphere Client. If this problem persists, detailed investigation is required to determine the cause and resolve the problem. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC07679-E	An attempt to delete storage failed. The specified volume cannot be deleted because it is being used by a datastore. (datastore name = "*Datastore-name*")	Check the following, and then retry the operation: • Make sure the specified parameters are correct. • Make sure that no datastore is using the target volume. If this problem persists, detailed investigation is required to determine the cause and resolve the problem. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC07680-E	An attempt to add storage failed. A storage system port that VMware ESX Server does not recognize was specified.	Specify a storage system port that VMware ESX Server recognizes, and then retry the operation. If you do not know such a port, contact the storage administrator.
KAIC07681-E	IPv6 is not enabled for the specified port "*port-information*".	Enable IPv6 for the port and retry.
KAIC07682-E	The VLAN of the specified port "*port-information*" is not enabled.	Enable the VLAN for the port and retry.

Message ID	Message Text	Description
KAIC07683-E	An invalid value "*port-information*" was specified for the port "*parameter*".	Specify a valid value for "*parameter*".
KAIC07684-E	"*parameter*" cannot be specified because "*parameter*" of the specified port "*port-information*" is set automatically.	Change "*parameter*" to manual and retry.
KAIC07685-E	An invalid value "*parameter*" was specified for the port.	Specify a valid IPv6 address.
KAIC07686-E	It is not possible to "*function(IPv6)*" parameter in the specified storage system.	Check the microcode version of the storage system.
KAIC07687-E	The specify vlan ID when VLAN status is enabled.	Specify the vlanID.
KAIC07688-E	The settings parameter "*parameter-name*" is not supported for the microcode version ("*microcode-version*") of the specified storage system.	Make sure the microcode version of the storage system is correct.
KAIC07689-E	The virtual storage machine family cannot be specified on this storage system.	Specify the virtual storage machine model, and then try again.
KAIC07690-E	No cluster information exists in the Device Manager database.	Using the NAS Manager or Hitachi File Services Manager, refresh the target file server or NAS module. If this problem continues, detailed investigation is required to determine the cause and resolve the problem. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC07691-E	The format of the file server name is invalid.	Confirm that the host name and IP address of the node registered in the file server management software is registered in Device Manager as a file server name in the format below. File server name format: node-host-name@node-IP-address
KAIC07692-E	The specified file system name (*file-system-name*) already exists as a file system name or a storage pool name. Specify another file system name, and then try again.	Specify another file system name, and then try again.

Message ID	Message Text	Description
KAIC07693-E	The specified directory (*directory-name*) already exists. Specify another directory.	Specify another directory.
KAIC07694-E	The specified CIFS share name (*CIFS-share-name*) already exists. Specify another CIFS share name.	Specify another CIFS share name.
KAIC07695-E	An unexpected error occurred while refreshing the file server or NAS module information.	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC07696-E	The specified volume was not found.	The volume might have been deleted. Confirm that the volume exists, and then retry the operation.
KAIC07697-E	The specified file system was not found.	The file system might have been deleted. Confirm that the file system exists, and then retry the operation.
KAIC07698-E	The specified volume "*devNum*" cannot be used.	The configuration of the storage system might have been changed. Revise the volume specification, and then retry the operation.
KAIC07699-E	The operation failed, because a virtual storage machine that has the same virtual family ("*virtual family*") and virtual serial number ("*virtual serial number*") already exists. Revise the specified virtual model and virtual serial number, and then try again.	Revise the specified virtual model and virtual serial number, and then try again.
KAIC07700-E	In the "*operation*" operation, an array group and LU cannot be specified at the same time.	Specify either an array group or an LU, and then retry the operation.
KAIC07701-E	"*option-name*" cannot be specified for command option 2.	Revise the request, and then retry the operation.
KAIC07702-E	The value specified for "*option-name*" of command option 2 is invalid.	Revise the request, and then retry the operation.
KAIC07703-E	The array group (chassis="*chassis*" number="*array-group-number*") have been specified more than once.	Revise the array group specification, and then retry the operation.
KAIC07704-E	The specified pool (function="*PP Name (Dynamic Provisioning)*"	Revise the pool specification, and then retry the operation.

Message ID	Message Text	Description
	pool ID="*poolID*") was not found in the Device Manager database.	
KAIC07705-E	A parameter is not specified : ArrayGroup "chassis" or "number".	Specify both "chassis" and "number" for ArrayGroup.
KAIC07706-E	In the specified request, the "chassis" and "number" attributes of the ArrayGroup element cannot be specified.	Revise the request, and then retry the operation.
KAIC07707-E	In the specified request, the number of requested ArrayGroup element must be one.	Revise the request, and then retry the operation.
KAIC07708-E	All "dpPoolID" attributes of LogicalUnit element must have the same value.	Revise the request, and then retry the operation.
KAIC07709-E	The number of elements specified in the request is invalid. In the specified request, one child element "*child-element-name*" must be specified for the "*parent-element-name*" element.	Revise the number of elements in the request, and then retry the operation.
KAIC07710-E	A required element is missing from the request. "*element-name*" or "*element-name*"	Revise the specification of the elements in the request.
KAIC07711-E	The array group (chassis="*chassis*" number="*array-group-number*") was not found in the storage system.	Revise the specification of the array group and storage system.
KAIC07712-E	The device number "*device-number*" is specified more than once.	Revise the device number specification.
KAIC07713-E	The drive types of all LDEVs that make up a single pool of "*PP Name (Dynamic Provisioning)*" must match.	Revise the specification of the LUs, and then retry the operation.
KAIC07714-E	A element "*element-name*" or attribute "*attribute-name*" is missing from the request.	Revise the request, and then retry the operation.
KAIC07715-E	The request contains both the capacityInKB parameter of the logical unit and the lba parameter of the LDEV.	Specify either the `capacityInKB` parameter of the logical unit or the `lba` parameter of the LDEV, but not both.
KAIC07716-E	An attempt to execute a request has failed. If option "*option-name*" is specified, the *element-name* element cannot be specified.	Revise the request, and then retry the operation.

Message ID	Message Text	Description
KAIC07717-E	An attempt to execute a request has failed. If option "*option-name*" is specified, the *attribute-name* attribute in a *element-name* element cannot be specified.	Revise the request, and then retry the operation.
KAIC07718-E	A search named "*search name*" already exists.	Use another search name.
KAIC07719-E	Registration of a logical group failed because a logical group named "*Logical Group Name*" already exists at the same level.	Revise the logical group name, and then try again.
KAIC07720-E	An attempt to create a TrueCopy pair has failed. The LDEV "*LUSE*" is a LUSE device. The number of LDEVs in the LUSE must be less than "*max-number-of-LDEVs-in-LUSE*".	Make sure that the request is valid, and then retry.
KAIC07721-E	An attempt to create a TrueCopy pair has failed. The LDEV "*LUSE*" is a LUSE device. The RAID type and the number of data disks must be identical for all LDEVs in the LUSE.	Make sure that the request is valid, and then retry.
KAIC07722-E	An attempt to create a TrueCopy pair has failed. To create a TrueCopy pair using the V-VOL of a QuickShadow pair, the QuickShadow pair must be created beforehand.	Make sure that the request is valid, and then retry.
KAIC07723-E	An attempt to create a "*pair-name*" pair has failed. The LDEV "*LUSE*" is a LUSE device. The number of LDEVs in the LUSE must be less than "*max-number-of-LDEVs-in-LUSE*".	Make sure that the request is valid, and then retry.
KAIC07724-E	An attempt to create a TrueCopy Async pair has failed because the size of the LDEV that makes up the LUSE was smaller than 1 GB.	Check the size of the LDEV that makes up the LUSE.
KAIC07725-E	In this API version, the TrueCopyAsync pair operation for the specified storage system is not supported.	Check the API versions supported by this storage system.
KAIC07726-E	The data pool for the specified storage system is not in the same default controller as the LU that will make up the pair.	Create a data pool, and then try again.

Message ID	Message Text	Description
KAIC07727-E	An attempt to create a TrueCopy Async pair has failed because the default controller of the LU to be defined in S-VOL was not the same as the current controller.	Check the default controller and a current controller of the LU.
KAIC07728-E	Error occurred while parsing response from host agent.	Contact the Support Center.
KAIC07729-E	An error occurred while encoding the message.	Contact the Support Center.
KAIC07730-E	If you used Disk Array Management Program or Storage Navigator Modular to create an expanded LU from two or more volumes assign to an LUN, the expanded LU cannot be deleted.	Use Disk Array Management Program or Storage Navigator Modular to delete the LUN that cannot be used, and then use Device Manager to refresh the storage system.
KAIC07731-E	Creation of an LDEV in the specified array group is not supported.	Revise the request, and then try again.
KAIC07732-E	You cannot change the *function (Tier/Saved Search/Logical Group)* type.	Revise the request.
KAIC07733-E	A parameter is not specified : Host "objectID" or "name".	Specify either "objectID" or "name" for Host.
KAIC07734-E	Invalid information was sent from host agent. Serial number of the storage system that has the replication volume was not specified.	Contact the Support Center.
KAIC07735-E	An attempt to get the information of the pair configuration on host "*host-name*" has failed. Error detail : "*error-detail*".	If this problem persists, contact the Support Center.
KAIC07736-E	The configuration file specified by instance number "*instance-number*" already exists on the host "*host-name*".	Specify another instance number, and then retry.
KAIC07737-E	The configuration file specified by instance number "*instance-number*" on Host "*host-name*" is not managed by Device Manager.	Specify another instance number, and then retry.
KAIC07738-E	The configuration file specified by instance number "*instance-number*" on Host "*host-name*" does not exist on the host "*host-name*".	Specify another instance number, and then retry.
KAIC07739-E	The specified group "*group-name*" exists in the configuration file (instance number "*instance-number*" on host "*host-name*").	Specify another group name, and then retry.

Message ID	Message Text	Description
KAIC07740-E	This API version does not support the LUN Management option.	Check this storage system's option list. You can also check the Device Manager Server XML API manual and make sure that the running API version supports the command.
KAIC07741-E	A value for the attribute "priority" is not specified for all "ExternalPathInfo" elements.	Specify a value for the attribute "priority" either for all "ExternalPathInfo" elements or for no "ExternalPathInfo" elements.
KAIC07742-E	The same value has been specified for the attribute "priority" in multiple "ExternalPathInfo" elements.	Specify different values for the attribute "priority" in multiple "ExternalPathInfo" elements.
KAIC07743-E	The value specified for the attribute "priority" in the element "ExternalPathInfo" differs from that specified for the specified path group.	For the attribute "priority", specify the same value as the attribute "priority" set for the specified path group.
KAIC07744-E	The specified Snapshot Group "*snapshotgroup-name*" does not exist in the storage system. (model-name "*model-name*", serial-number "*serial-number*").	Specify another Snapshot Group name, and then try again.
KAIC07745-E	A child logical group cannot be created in the specified logical group. For the parent logical group, specify a logical group that is a folder.	For the parent logical group, specify a logical group that is a folder.
KAIC07746-E	A tier named "*tier name*" already exists on a storage system.	Revise the tier name, and then try again.
KAIC07747-E	The specified pair(P-VOL :*P-VOL Device number*, S-VOL :*S-VOL Device number*) does not exist in the Snapshot Group "*snapshotgroup-name*".	Specify another pair, and then try again.
KAIC07748-E	A parameter is not specified : storage system "arrayType" or "serialNumber".	Specify both "arrayType" and "serialNumber" for storage system.
KAIC07749-E	A parameter is not specified : SnapshotGroup "groupID" or "groupName".	Specify either "groupID" or "groupName" for SnapshotGroup.
KAIC07750-E	The specified device name "*device-name*" exists in the configuration file (instance number "*instance-number*" on host "*host-name*").	Specify another device name, and then retry.
KAIC07751-E	The specified group "*group-name*" does not exist in the	Specify another group name, and then retry.

Message ID	Message Text	Description
	configuration file (instance number "*instance-number*" on host "*host-name*").	
KAIC07752-E	The host agent (URL = "*url-of-host-agent*") does not support the "*function-name*" function.	Use a host agent of version "*necessary-version*" or later.
KAIC07753-E	An error occurred during a pair operation.	If this problem persists, contact the Support Center.
KAIC07754-E	An attempt to delete the information for a pair configuration (instance number "*instance-number*" on host "*host-name*" and instance number "*instance-number*" on host "*host-name*") has failed. Error detail, host "*host-name*" : "*error-detail*"	If this problem persists, contact the Support Center.
KAIC07755-E	An attempt to create a pair has failed. The specified pair configuration may remain in the configuration file (instance number "*instance-number*" on host "*host-name*" and instance number "*instance-number*" on host "*host-name*"). Error details: "*error-detail*" The messages might contain SSB code in the format shown. SSB code: SSB=0xXXXX,0xYYYY (Example: SSB=0xD004,0xFC7E) The SSB code is information generated by CCI or RAID Manager to distinguish errors. Message ID	Message Text	Description
		Center, who may ask you to collect troubleshooting information.
KAIC07758-E	The specified configuration file with instance number is "*instance-number*" does not exist on host "*host-name*".	Check that the configuration file exists on the host "*host-name*", and then retry.
KAIC07759-E	The specified configuration file (instance number "*instance-number*" on host "*host-name*") is not valid. The configuration file is changed, or, the specification of Command Device is invalid.	Check and, if necessary, revise the configuration file. (instance number "*instance-number*" on host "*host-name*") To perform a pair operation for volumes of a virtual storage machine, check one of the following, depending on the operation: 1. To specify virtual IDs for the pair volumes, make sure that HORCM_VMCD is defined in the configuration file. 2. To specify physical IDs for the pair volumes, make sure that HORCM_VMCD is not defined in the configuration file.
KAIC07760-E	The content of the specified configuration file (instance number "*instance-number*") is not the same as that on the host "*host-name*".	Perform a refresh.
KAIC07761-E	The specified device name does not exist in the configuration file (instance number "*instance-number*" on host "*host-name*").	Perform a refresh.
KAIC07762-E	An attempt to delete a pair has failed. Error detail, host "*host-name*" : "*error-detail*". The messages might contain SSB code in the format shown. SSB code: SSB=0xXXXX,0xYYYY (Example: SSB=0xD004,0xFC7E) The SSB code is information generated by CCI or RAID Manager to distinguish errors. See the CCI or RAID Manager user guide and refer to the SSB code to resolve the error.	If this problem persists, contact the Support Center.
KAIC07763-E	Device Manager Server timed out.	If this problem persists, contact the Support Center.

Message ID	Message Text	Description
KAIC07764-E	An internal server error occurred, because the parameter "*parameter*" was not specified.	Contact the Support Center.
KAIC07765-E	An attempt to create a pair has failed. The specified pair configurations may remain in the configuration files (instance number "*instance-number*" on host "*host-name*" and instance number "*instance-number*" on host "*host-name*").	If this problem persists, contact the Support Center.
KAIC07766-E	An attempt to start a HORCM instance (instance number "*instance-number*") on host "*host-name*" failed.	Check the following: • The contents of the config file • The settings details of command devices that are recognized by the host If this problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC07767-E	Some pairs may be not deleted.	If this problem persists, contact the Support Center.
KAIC07768-E	An attempt to restart the HORCM instance (instance number "*instance-number*" on host "*host-name*") has failed. Error detail: "*error-detail*"	Contact the administrator of the host, and then restart the HORCM instance on the host.
KAIC07769-E	An internal server error occurred. An attempt to execute a service for the host agent has failed.	If this problem persists, contact the Support Center.
KAIC07770-E	An attempt to shut down the HORCM instance (instance number "*instance-number*" on host "*host-name*") has failed. Error detail: "*error-detail*"	If this problem persists, contact the Support Center.

KAIC07784-E	An attempt to modify a pair has failed. Error details, host "*host-name1*" : "*error-detail*", host "*host-name2*" : "*error-detail*".	If this problem persists, contact the Support Center.
KAIC07785-E	An attempt to restart a HORCM instance (instance number "*instance-number*") on host "*host-name*" failed.	If this problem persists, contact the Support Center.
KAIC07786-E	An internal error occurred in host agent ("*agent-url*").	If this problem persists, contact the Support Center.
KAIC07787-E	The host agent (host-name "*host-name*") cannot support the "*function-name*" function. Use "*PP on Host*" of version "*necessary-version*" or later on this host.	Check the host agent environment.
KAIC07788-E	Device Manager Server cannot operate the host agent service "*operation*".	Check the host agent environment.
KAIC07789-E	An error occurred during processing of the service by the host agent. (error message from the host agent = "*error-message-from-host-agent*")	If this problem persists, contact the Support Center.
KAIC07790-E	An attempt to get volume information on host "*host-name*" has failed. Error detail : "*error-detail*".	Check the host agent status and the status of the command device that is connected to the pair management server. Make sure the following are correct: • Firewall settings • Communication settings of the Device Manager server and Device Manager agent • Connection status of the command device for which authentication mode is enabled When SSL/TLS communication is used between the Device Manager server and the Device Manager agent, user authentication for the storage system is unnecessary. When SSL/TLS communication is not used, complete user authentication for the storage system. If the problem persists, contact customer support. Additional investigation is required to

Message ID	Message Text	Description
		determine the cause and resolve the problem.
KAIC07791-E	An attempt to get program product information on host "*host-name*" has failed. Error detail: "*error-detail*".	If this problem persists, contact the Support Center.
KAIC07792-E	An attempt to acquire pair volume information on the host "*host-name*" has failed. Error details: "*error-detail*".	If this problem persists, contact the Support Center.
KAIC07793-E	An attempt to execute the request has failed. The specified LU "*device-number*" is being used by *PP Name (UniversalReplicator)*.	Revise the LU specifications, and then try again.
KAIC07794-E	Creation, modification, or deletion of UniversalReplicator or Continuous Access XP Journal pairs is not supported.	Revise the request, and then try again.
KAIC07795-E	The last path of an LU (devNum = "*Device number*") used by *PP Name (UniversalReplicator)* cannot be deleted.	Check and, if necessary, revise the specification.
KAIC07796-E	An attempt to execute the request has failed. The specified LU "*device-number*" is being used as a journal volume.	Revise the LU specifications, and then try again.
KAIC07797-E	LDEV of device number "*device-number*" cannot be used to make up a LUSE because the device number is smaller than the maximum device number of the LDEVs that make up the first specified LUSE.	To create a LUSE based on a LUSE that has already been configured, specify an LDEV with a device number larger than the maximum device number of the LDEVs that make up the first LUSE.
KAIC07798-E	The microcode version of the storage system is insufficient for the requested an LUSE operation using a path defined LDEV. The microcode version is "*microcode-version*"	Check the version of the software contained in the storage system.
KAIC07799-E	An attempt to execute the request has failed. The specified LU "*device-number*" is being used as a system disk.	Revise the LU specifications, and then try again.
KAIC07800-E	There are too many elements in the request. The maximum number of "*element-name-in-XML-API*" elements which can be specified is "*maximum-number-of-elements*".	Check the number of elements, and then retry.

Message ID	Message Text	Description
KAIC07801-E	A required element is missing from the request. Specify "*element-name*" elements.	Check that all of the required elements of a request are present. Provide the missing element, and then retry.
KAIC07802-E	The number of elements specified in the request is insufficient. To execute this command, "*minimum-number-of-elements*" or more "*element-name*" elements are required.	Check the number of elements, and then retry.
KAIC07803-E	Missing parameter: "*element-name*" "*attribute-name-of-element*".	Specify the required parameter, and then retry.
KAIC07804-E	A parameter is invalid. The same object is specified for at least two "Path" elements in the request.	Revise the specifications for the object of the path element, and then try again.
KAIC07805-E	Some parameters are incorrect. The same WWN "*WWN (xx.xx.xx.xx.xx.xx.xx.xx)*" is specified for two or more "WorldWideName" elements in the request.	Check the WWN specifications of the WorldWideName elements, and then retry.
KAIC07806-E	The command cannot be executed because the security switch for the specified port "*port-name*" is OFF. To execute this command, the security switch for the port must be ON.	Turn the security switch ON for the specified port, and then try again.
KAIC07807-E	An LUN group cannot be created because there are no paths on the specified port "*port-name*". To create an LUN group, there must be at least one path on the port at the creation destination.	Create at least one path on the specified port, and then try again.
KAIC07808-E	The command cannot be executed because executing it will cause the number of LUN groups on the specified port "*port-name*" to exceed the maximum number of LUN groups "*maximum-number-of-LUN-groups-that-can-be-created-on-a-port*" that can be created on a port.	Revise the specifications for the ports and LUN groups so they do not exceed the maximum number, and then try again.
KAIC07809-E	The command cannot be executed because executing it will cause the number of WWN groups on the specified port "*port-name*" to exceed the maximum number of WWN groups "*maximum-number-of-WWN-groups-that-*	Revise the specifications for the ports and WWN groups so they do not exceed the maximum number, and then try again.

Message ID	Message Text	Description
	can-be-created-on-a-port" that can be created on a port.	
KAIC07810-E	The specified nickname "*nickname*" is invalid, since the maximum length for a nickname is "*maximum-length-of-nickname*" bytes.	Check the nickname, and then retry.
KAIC07811-E	The specified nickname "*nickname*" is invalid, since it contains a forbidden character.	Check the nickname, and then retry.
KAIC07812-E	The specified nickname "*nickname*" is not available. This nickname is already used by the other LUNGroup on the same port.	Specify a nickname that is not used by other LUNGroups on the same port, and then retry.
KAIC07813-E	The specified nickname "*nickname*" is not available. This nickname is already used by another WWN/WWNGroup on the same port.	Specify a nickname that is not used by other WWN/WWNGroups on the same port, and then retry.
KAIC07814-E	The specified path cannot be used because it belongs to another LUN group on the same port.	Specify a path that does not belong to another LUN group on the same port, and then try again.
KAIC07815-E	The specified WWN "*WWN*" is not available. This WWN already belongs to the other WWNGroup on the same port.	Specify the WWN which does not belong to other WWNGroups on the same port, and then retry.
KAIC07816-E	It is not possible to group paths that have different WWN securities each other. Paths that have same WWN securities or no WWN security must be specified.	Check the specification of paths, and then retry.
KAIC07817-E	It is not possible to group WWNs used by different paths. WWNs that are used by the same path(s), or are not used, must be specified.	Check the specification of WWNs, and then retry.
KAIC07818-E	The specified path is not a path on the port "*port-name*". A path that is on the specified port must be specified.	Revise the relationship between the specified port and path, and then try again.
KAIC07819-E	The specified WWN is a member of WWNGroup. In order to perform secure/unsecure by WWNGroup, specify all WWNs that are members of the WWNGroup.	Specify all members of the WWNGroup or specify WWN that does not belong to the WWNGroup, and then retry.
KAIC07820-E	The specified HostStorageDomain includes a path belonging to an	Check that there is no path belonging to the LUNGroup in the

Message ID	Message Text	Description
	LUNGroup. This command does not support secure/unsecure with paths belonging to an LUNGroup.	HostStorageDomain to specify, and then retry.
KAIC07821-E	This operation for the WWN comprising a WWNGroup is not supported by the specified API version.	Check the Device Manager Server XML API manual and make sure that the running API version supports the command.
KAIC07822-E	The specified WWN "*WWN*" is not available. This WWN already belongs to HostStorageDomain "*HostStorageDomain*" on the same port.	Specify the WWN which does not belong to other HostStorageDomain on the same port, and then retry.
KAIC07823-E	A non-representative LDEV (devNum = "*Device number*") that is making up a LUSE was specified. A LUSE cannot be created by specifying a non-representative LDEV.	Check and, if necessary, revise the LDEV specification.
KAIC07824-E	A non-representative LDEV (devNum = "*Device number*") that is making up a LUSE was specified. A path cannot be set to a non-representative LDEV.	Check and, if necessary, revise the LDEV specification.
KAIC07825-E	The specified nickname "*nickname*" is not available. This nickname is already used by another WWN/ HostStorageDomain on the same port.	Specify a nickname that is not used by other WWN/ HostStorageDomain on the same port, and then retry.
KAIC07826-E	The specified nickname "*nickname*" is not available. This nickname is already used by another HostStorageDomain on the same port.	Specify a nickname that is not used by other HostStorageDomain on the same port, and then retry.
KAIC07827-E	The specified nickname "*nickname*" is not available. This nickname is already used by another WWN on the same port.	Specify a nickname that is not used by other WWN on the same port, and then retry.
KAIC07828-E	The specified Host Storage Domain (nickname="*Nickname for Host Storage Domain*", portID="*Port ID*") does not exist.	Revise the parameter specifications
KAIC07829-E	The specified WorldWideName (nickname="*Nickname for WorldWideName*") does not exist in the Host Storage Domain (portID="*Port ID*", domainID="*Domain ID*").	Revise the parameter specifications.
KAIC07830-E	The last path of an LU (devNum = "*Device number*") set for *PP*	Delete the settings, and then delete the path.

Message ID	Message Text	Description
	Name (QuickShadow) cannot be deleted.	
KAIC07831-E	In this API version, creation, modification, and deletion of "*PP Name*" pairs on the specified device is not supported.	Revise the request, and then try again.
KAIC07832-E	The specified ISCSIName (nickname = *Nickname for ISCSIName*) does not exist in the host storage domain (portID = *Port ID*, domainID = *Domain ID*).	Revise the specification.
KAIC07833-E	The specified host storage domain does not exist in the Device Manager database.	Revise the host storage domain specification.
KAIC07834-E	There is no communication protocol by which host "*host-name*" and host "*host-name*" can communicate with each other.	Revise the host settings.
KAIC07835-E	The IP address necessary to perform the specified operation is not registered with the host "*host-name*".	Revise the host agent version, the RAID Manager version, and/or the host settings.
KAIC07836-E	This operation cannot be performed for a port (portID="*Port ID*") whose port role is "*port-role*".	Revise the port specification.
KAIC07837-E	The command cannot be used for "*Replication function*" pair.	Revise the request.
KAIC07838-E	The specified pair does not exist in the specified storage system.	Revise the request, and then try again.
KAIC07839-E	Device Manager Server cannot operate the host agent service "*operation*".	Revise the host agent version, the RAID Manager version, and/or the host settings.
KAIC07840-E	The specified port already has the maximum number of LUNs.	No more LUNs can be specified on this port, select a different port on which to add LUNs.
KAIC07841-E	The specified HostStorageDomain already has the maximum number of LUNs.	No more LUNs can be specified on this HostStorageDomain. Select a different HostStorageDomain on which to add LUNs.
KAIC07842-E	The specified LDEV (devNum = "*Device number*") is not a LUSE.	Make sure the specified LDEV is correct.
KAIC07843-E	The specified LUSE (devNum = "*Device number*") has an LUN. LUSEs that have LUNs cannot be deleted with the "DeleteLUSE" command.	Make sure the LUSE specification is correct.

Message ID	Message Text	Description
KAIC07844-E	Some parameters are incorrect. The same ruleID "*ruleID*" is specified with two or more "Rule" elements in the request.	Check the specification of the ruleID of Rule elements, and then retry.
KAIC07845-E	An attempt is being made to set multiple volumes for the same port, group, or LUN group (portID = "*Port ID*", domainID = "*Domain ID*", lun = "*LUN*").	Check and, if necessary, revise the specifications.
KAIC07846-E	The LDEV (devnum = "*Device number*") you are attempting to use, to make up the LUSE, is a command device.	Check and, if necessary, revise the specifications.
KAIC07847-E	An attempt is being made to set multiple volumes for the same port, group, or LUN group (portID = "*Port ID*", lun = "*LUN*").	Check and, if necessary, revise the specifications.
KAIC07848-E	The first specified LDEV (devNum = "*Device number*") must have the lowest number from among the LDEVs in the list.	Revise the specification, and then retry.
KAIC07849-E	For the specified request, if (type="*array-group type*") is specified in the ArrayGroup element, the dpPoolID or threshold attribute in a LogicalUnit element cannot be specified.	Revise the request, and then retry the operation.
KAIC07850-E	In the specified request, "type" attributes in more than one ArrayGroup element differ. All "type" attributes within the ArrayGroup elements must be the same.	Revise the specification of the ArrayGroup element "type" attributes, and then retry the operation.
KAIC07851-E	The "force" option cannot be specified for this ArrayGroup element.	Revise the request, and then retry the operation.
KAIC07852-E	A specified ArrayGroup element (chassis="*chassis*", number="*array-group number*") cannot be deleted because the LU "*device Number*" in the array group is a pair device.	Revise the specification of the ArrayGroup element, and then retry the operation.
KAIC07853-E	The specified LU "*device Number*" cannot be deleted because it is a pair device.	Revise the specification of the LogicalUnit element, and then retry the operation.
KAIC07854-E	This "*API or CLI*" version does not support deletion of "*PP name (QuickShadow)*" virtual volumes.	Check what "*API or CLI*" versions support deletion of "*PP name (QuickShadow)*" virtual volumes.

Message ID	Message Text	Description
KAIC07855-E	This "*API or CLI*" version does not support creation of "*PP name (QuickShadow)*" virtual volumes.	Check what "*API or CLI*" versions support creation of "*PP name (QuickShadow)*" virtual volumes.
KAIC07856-E	This request cannot specify an ArrayGroup element that has the attribute (chassis="*chassis*").	Revise the specification of the ArrayGroup element.
KAIC07857-E	This request cannot specify a LogicalUnit element that has the attribute (chassis="*chassis*").	Revise the specification of the LogicalUnit element.
KAIC07858-E	In the specified request, "type" attributes in more than one LogicalUnit element differ. All "type" attributes within the LogicalUnit elements must be the same.	Revise the specification of the LogicalUnit elements.
KAIC07859-E	The specified storage system already has the maximum number of Snapshot Groups.	Select a different storage system.
KAIC07860-E	Missing parameter: DataRetention "*parameter-name*". At least one of these parameters is required to change the protection attributes.	Specify the required parameter, and then retry.
KAIC07861-E	The value for "*parameter-name*" is invalid.	Specify a valid value, and then retry.
KAIC07862-E	The specified LDEV is not an open volume. The protection attributes of the specified LDEV cannot be changed.	Check the specification of the LDEV.
KAIC07863-E	The specified LDEV is not a representative-LDEV. The protection attributes of the specified LDEV cannot be changed.	Check the specification of the LDEV.
KAIC07864-E	The specified LDEV is an OnDemand device. The protection attributes of the specified LDEV cannot be changed.	Check the specification of the LDEV.
KAIC07865-E	The specified Snapshot Group already has the maximum number of pairs.	Select a different Snapshot Group.
KAIC07866-E	The specified LDEV is a *PP Name (VolumeMigration)* reserved volume. The protection attributes of the specified LDEV cannot be changed.	Check the specification of the LDEV.
KAIC07867-E	The specified LDEV is a command device. The protection attributes	Check the specification of the LDEV.

Message ID	Message Text	Description
	of the specified LDEV cannot be changed.	
KAIC07869-E	The specified LDEV is not protected. The retention term cannot be set for an LDEV that is not protected.	Check the specification of the LDEV.
KAIC07870-E	The specified LDEV is a pool volume. The protection attributes of the specified LDEV cannot be changed.	Revise the LDEV specification.
KAIC07871-E	When the ioAccess value is changed to a value other than Read/Write, replication cannot be set.	Revise the ioAccess and replication specifications.
KAIC07872-E	The ioAccess value is set to a value other than Read/Write, so replication cannot be set.	Revise the ioAccess and replication specifications.
KAIC07873-E	Neither the buffer space for new page assignment nor the buffer space for tier relocation can be set for the microcode version of the specified storage system.	Verify the microcode version of the storage system, and then retry the operation.
KAIC07874-E	Neither the buffer space for new page assignment nor the buffer space for tier relocation can be set while the pool is being expanded.	Revise the request, and then retry the operation.
KAIC07875-E	Neither the buffer space for new page assignment nor the buffer space for tier relocation can be set while the pool is being reduced.	Revise the request, and then retry the operation.
KAIC07876-E	Neither the buffer space for new page assignment nor the buffer space for tier relocation can be set while tier ranks are being set for external volumes.	Revise the request, and then retry the operation.
KAIC07877-E	Neither the buffer space for new page assignment nor the buffer space for tier relocation can be set because the specified pool is a *PP Name(Dynamic Provisioning)*pool.	Revise the request, and then retry the operation.
KAIC07878-E	The pool was successfully created, but the buffer space for new page assignment and the buffer space for tier relocation cannot be changed. Check the status of the created pool ("*poolID*"), and then change the buffer space for new page	Check the storage system status, and then retry the operation.

	logical unit (serial number = "*serial-number*", device number = "*device-number*") was not found in the database.	
KAIC07915-E	An attempt to execute the request has failed. The specified logical unit (serial number = "*serial-number*", device number = "*device-number*") cannot be used for replication because it is "*cause*".	Revise the request, and then try again.
KAIC07916-E	An attempt to execute the request has failed. For the specified logical unit (serial number = "*serial-number*", device number = "*device-number*"), security for the host has not been set.	Set the security for the host, and then perform a refresh.
KAIC07917-E	An attempt to execute the request has failed. An invalid value has been specified for muNumber.	Revise the muNumber specification.
KAIC07918-E	An attempt to execute the request has failed. The specified storage system (serial number = "*serial-number*") was not found in the database.	Revise the request, and then try again.
KAIC07919-E	An attempt to execute the request failed. No host agents were found for the specified host "*host-name*".	Confirm that host agents have been installed for the host "*host-name*", and then restart the agents. If the host is a mainframe host, confirm that a valid URLLink has been specified.
KAIC07920-E	No more ReplicationGroups may be created.	Contact the Support Center.
KAIC07921-E	No more ConfigFiles may be created.	Contact the Support Center.
KAIC07922-E	The request has failed. Fence Level 'Status' was not used for the specified storage system.	Check the parameter, and then retry.
KAIC07923-E	The license key for "*license-name*" has not been installed.	Contact the Support Center. Install the license key.
KAIC07924-E	The license key for "*license-name*" is disabled.	Contact the Support Center. Enable the license key.
KAIC07925-E	The request has failed. Duplicated pairNames "*pair-name*" are specified.	Specify pair names which are unique in a HORCM instance.

Message ID	Message Text	Description
KAIC07926-E	The request has failed. The specified pairName "*pair-name*" is already being used.	Specify pair names which are unique in a HORCM instance.
KAIC07927-E	No more ReplicationInfo may be created.	Contact the Support Center.
KAIC07928-E	The specified storage system has just one port controller.	Dual-port-controller is necessary.
KAIC07929-E	An attempt to execute the request has failed. A remote path or the MCU-RCU path between the local storage system and the remote storage system is not correctly set.	Revise the remote path or the MCU-RCU path.
KAIC07930-E	An attempt to execute the request has failed. The host "*host-name*" does not recognize the specified logical unit (serial number = "*serial-number*", device number = "*device-number*").	Make sure that the host can recognize the logical unit, and then execute the host agent command "`HiScan`".
KAIC07931-E	The request has failed. The size of the specified LogicalUnits pair does not match.	Specify the LogicalUnits whose size are same for P-VOL and S-VOL.
KAIC07932-E	The request has failed. No pair could be created with the specified logical units by the specified replication function.	Check the request, and then retry.
KAIC07933-E	The request has failed. The emulation type of the specified LogicalUnits pair does not match.	Specify the LogicalUnits whose emulation type are same for P-VOL and S-VOL.
KAIC07934-E	The request has failed. The default port controller of the specified LogicalUnits pair does not match.	Specify the LogicalUnits whose default port controller are same for P-VOL and S-VOL.
KAIC07935-E	An attempt to execute the request has failed. The specified array group (serial number = "*serial-number*", chassis = "*chassis*", number = "*array-group-number*") was not found in the database.	Revise the request, and then try again.
KAIC07936-E	The request has failed. The specified LogicalUnits pair does not match. RAID type does not meet the conditions.	Specify the LogicalUnits whose number of data disk are same for P-VOL and S-VOL. If the pair is TrueCopy, RAID type of the LogicalUnits must be "RAID5".
KAIC07937-E	The request has failed. The specified LogicalUnit was LUSE.	Specify the LogicalUnits which are not LUSE.

Message ID	Message Text	Description
KAIC07938-E	The request has failed. The specified port number "*port-number*" was already used in another configuration file.	Specify the port number other than "*port-number*".
KAIC07939-E	The request has failed. Replication pairs in the same replication group must have the same replication function.	Check the request, and then retry.
KAIC07940-E	The request has failed. Replication pairs in the same replication group must have the same fence level.	Check the request, and then retry.
KAIC07941-E	The request has failed. storage systems in the same replication group must be all RAID or All DF.	Check the request, and then retry.
KAIC07942-E	The request has failed. The specified replication group cannot be operated on per group. The configuration file contains an unknown definition.	Operate per pair.
KAIC07943-E	An unexpected response was returned from the host agent transport.	Contact the Support Center.
KAIC07944-E	Some of the requests of "*api-name*" has failed.	If this problem persists, contact the Support Center.
KAIC07945-E	This GetHost request is invalid. "*element-name*" do not have a objectID.	Contact the Support Center.
KAIC07946-E	The same object is included in a single request.	Revise the request, and then try again.
KAIC07947-E	The specified storage system does not support TrueCopyAsync.	Check the request, and then retry.
KAIC07948-E	Reverse resynchronization cannot be performed for the specified pair.	Revise the request, and then try again.
KAIC07949-E	An invalid replication configuration was specified.	Confirm that a replication configuration is valid.
KAIC07950-E	The request has failed. The specified MU number is already in use.	Specify another MU number.
KAIC07951-E	An attempt to execute the request has failed. The storage system "*storage-array-name*" can have a maximum of "*max-number-of-pairs*" "*replication-function*" pairs.	Delete an existing pair.
KAIC07952-E	An attempt to execute the request has failed. The specified	Revise the request, and then try again.

Message ID	Message Text	Description
	storage system (sequence number = "*sequence-number*") was not found in the database.	
KAIC07953-E	The request has failed. The specified logical unit pair is invalid. The number of configured LDEVs is different.	Specify the LogicalUnits whose number of LDEVs are same for P-VOL and S-VOL.
KAIC07954-E	The request has failed. The specified host (name="*host-name*", hostID="*host-id*") cannot handle replication. "*agent-or-raidmanager*" is not installed.	Install "*agent-or-raidmanager*", and then retry.
KAIC07955-E	The request has failed. The specified Host (name="*host-name*", hostID="*host-id*") cannot handle replication. The host does not recognize the logical units.	Make sure that the host "*host-name*" recognizes the logical units, and then perform "`HiScan`" command from the host agent.
KAIC07956-E	The request has failed. The specified Host (name="*name*", hostID="*host-id*") cannot handle replication. The host does not recognize the command device.	Make sure that the host "*name*" recognizes the command device, and then perform "`HiScan`" command from the host agent.
KAIC07957-E	The request has failed. The specified LogicalUnits are not open volumes.	Specify open-volume-LogicalUnits for P-VOL and S-VOL.
KAIC07958-E	An attempt to execute the request has failed. The combination of the pair that configures the group is invalid.	Revise the request, and then try again. Alternatively, specify a different group, and then try again.
KAIC07959-E	The request has failed. In the case of QuickShadow, ReplicationInfo's status must be 'Simplex'.	Specify another LU, and then retry.
KAIC07960-E	The request has failed. In the case of QuickShadow, S-VOL must be QuickShadow V-VOL.	Specify QuickShadow V-VOL for S-VOL.
KAIC07961-E	The request has failed. The specified P-VOL is not paired with selected V-VOL when QuickShadow pair was made.	Specify another LU, and then retry.
KAIC07962-E	The request has failed. The QuickShadow pair could not be created in the specified array system.	Check the request, and then retry.
KAIC07963-E	The request has failed. The port ID "*port-id*" is invalid.	Specify another port ID, and then retry.
KAIC07964-E	An attempt to execute the request has failed. For the	Set the security for the host, and then perform a refresh.

Message ID	Message Text	Description
	specified logical unit (serial number = "*serial-number*", device number = "*device-number*"), security for the host has not been set on the specified port "*port-ID*".	
KAIC07965-E	An attempt to execute the request has failed. The host "*host-name*" does not recognize the specified logical unit (serial number = "*serial-number*", device number = "*device-number*") on the specified port "*port-ID*".	Make sure that the host can recognize the logical unit, and then execute the host agent command "`HiScan`".
KAIC07966-E	An attempt to execute the request has failed. There are no paths on the specified port "*port-ID*" for the specified logical unit (serial number = "*serial-number*", device number = "*device-number*").	Set a path for the logical unit on the specified port.
KAIC07967-E	An attempt to execute the request has failed. There are no paths for the specified logical unit (serial number = "*serial-number*", device number = "*device-number*").	Set a path for the logical unit.
KAIC07968-E	The request has failed. No port was found.	Confirm the port status.
KAIC07969-E	In this API version, QuickShadow is not supported.	Check the Device Manager Server XML API manual and make sure that the running API version supports the command.
KAIC07970-E	The specified icon "*icon*" is invalid.	Check the specified icon file.
KAIC07971-E	An attempt to execute the request has failed. Multiple pairs for one P-VOL of QuickShadow cannot be restored at the same time.	Check the request, and then retry.
KAIC07972-E	The request has failed. The specified instance number "*instance-number*" is already in use.	Specify another instance number.
KAIC07973-E	The LUSE could not be created because the types or attributes of the specified LDEVs (devnum = "*Device number*" and devnum = "*Device number*") are not identical.	Make sure that all of the LDEVs making up the LUSE satisfy the following conditions: 1. The volume classes (internal or external) are identical. 2. The disk types are identical.

Message ID	Message Text	Description
		3. The host's I/O suppression modes are identical. 4. The cache modes are identical.
KAIC07974-E	The paths cannot be create to the external port "*port name*".	Check and, if necessary, revise the port specification.
KAIC07975-E	Creating or deleting external volumes is not supported.	Check and, if necessary, revise the specification of the LDEV or ArrayGroup.
KAIC07976-E	The specified DevNum "*Device number*" already exists in the Device Manager database.	Revise the specification for devNum of the LogicalUnit elements, and then try again.
KAIC07977-E	An attempt to execute the request has failed. There are no Differential Management LUs in the specified device.	Create a Differential Management LU, and then try again.
KAIC07978-E	The specified parameter is invalid. The value that can be specified for a pattern attribute of the WritingPattern element is a hexadecimal number from "*Min. parameter value*" to "*Max. parameter value*" bytes.	Revise the request, and then retry.
KAIC07979-E	The specified last WritingPatterns element parameter is invalid.	Check the request, and then retry.
KAIC07980-E	The specified parameter is invalid. "*element-name*" "*attribute-name-of-element*" : "*attribute-value-of-element*"	Make sure that the specified parameter is valid, and then retry.
KAIC07981-E	The stripe sizes of the LDEVs do not match. The LUSE (devNum = "*Device number*") cannot be created.	Make sure the LDEV specifications are correct.
KAIC07982-E	The specified stripeSizeInKB is invalid.	Check the request, and then retry.
KAIC07983-E	An attempt to execute the request has failed. The specified replication function is not supported in this storage system.	Revise the request, and then try again.
KAIC07984-E	An attempt to execute the request has failed. The specified replication operation is not supported for this storage system.	Check the microcode version of the storage system.
KAIC07985-E	An attempt to execute the request has failed. The specified replication operation cannot be performed for the emulation type of this volume.	Revise the request, and then try again.

Message ID	Message Text	Description
KAIC07986-E	An attempt to execute the request has failed. There is no specified journal group.	Revise the request, and then try again.
KAIC07987-E	An attempt to execute the request has failed. The journal group cannot be used because the journal volume is not registered.	Revise the request, and then try again.
KAIC07988-E	An attempt to execute the request has failed. The specified journal group is already being used by the mainframe function.	Revise the request, and then try again.
KAIC07989-E	An attempt to execute the request has failed. The specified journal group is already used as a primary journal group or secondary journal group.	Revise the request, and then try again.
KAIC07990-E	An attempt to execute the request has failed. The specified MU number cannot be used.	Revise the specification, and then retry.
KAIC07991-E	An attempt to execute the request has failed. The combination of the journal groups is invalid.	Revise the request, and then try again.
KAIC07992-E	An attempt to execute the request has failed. The CLPR of the pair volume does not match the CLPR of the journal volume that configures the journal group.	Revise the request, and then try again.
KAIC07993-E	An attempt to execute the request has failed. The combination of the journal group and the replication group is invalid.	Revise the request, and then try again.
KAIC07994-E	An attempt to execute the request has failed. All replication pairs in the same replication group must use the same journal group.	Revise the request, and then try again.
KAIC07995-E	The requested operation could not be performed. The specified LU is being used for a *PP Name (Dynamic Provisioning)* pool, and cannot be used as the P-VOL or S-VOL.	Revise the LU specification.
KAIC07996-E	Cannot use volume A *PP Name (Dynamic Provisioning)*as the P-VOL or S-VOL for replication function: *PP Name (TrueCopy,*	Revise the LU specification. Notes For VSP and USP V/VM (microcode version 60-02-48-*XX/XX* or later) storage systems,

Message ID	Message Text	Description
	TrueCopyAsync, QuickShadow, UniversalReplicator)	DP volumes can be used for QuickShadow P-VOLs.
KAIC07997-E	The requested operation could not be performed. If you use a *PP Name (Dynamic Provisioning)* volume as the S-VOL for *PP Name (ShadowImage)*, you must also use a *PP Name (Dynamic Provisioning)* volume as the P-VOL.	Revise the LU specification.
KAIC07998-E	An attempt to execute the request has failed. The CLPR of the pair volume does not match the CLPR of the pair volume that belongs to the journal group.	Revise the request, and then try again.
KAIC07999-E	The resource is not reserved. Another task might be using the target resource. Check the status of the tasks.	Check the status of the tasks.
KAIC08000-E	A part that differs from the actual machine was found in the storage system information. Refresh the storage system. If you are a local user, contact the system administrator.	The Device Manager server might not contain the latest storage system information. Refresh the information by using the GUI refresh function, or by executing AddStorageArray of the API.
KAIC08001-E	A part that differs from the actual machine was found in the storage system information. Refresh the storage system. If you are a local user, contact the system administrator. (error = "*error*")	The Device Manager server might not contain the latest storage system information. Refresh the information by using the GUI refresh function, or by executing AddStorageArray of the API.
KAIC08002-E	"FreeSpace" cannot be specified. Revise the "bulk", "dividebycap", and "dividebynum" options, and then retry.	Revise the option specification.
KAIC08003-E	This API version does not support batch operations on Lus.	Make sure that the API version supports the command.
KAIC08004-E	An attempt to execute a request has failed. The combination of options "*option name*" and "*option name*" is invalid.	Revise the option specification.
KAIC08005-E	The number of LUs that can be deleted cannot exceed "*maximum number of LUs*".	Specify a valid value.
KAIC08006-E	Batch deletion is not possible for LUs whose emulation is not OPEN-V. (devNum = *device number*)	Revise the LU specification, and then try again.

Message ID	Message Text	Description
KAIC08007-E	An LDEV (devNum = *device number*) that has a path defined cannot be deleted.	Defined paths must be deleted before deleting LDEVs.
KAIC08008-E	An LDEV (devNum = *device number*) that has a LUSE defined cannot be deleted.	LUSEs must be deleted before deleting LDEVs.
KAIC08009-E	The specified array group does not exist in the Device Manager database.	Revise the array group specification.
KAIC08010-E	The specified array group does not have sufficient free space.	Revise the array group specification.
KAIC08011-E	The Device Manager database does not have sufficient free space.	Revise the free space specification.
KAIC08012-E	A *PP Name (Dynamic Provisioning)* volume (devNum = *device number*) cannot be deleted in Device Manager.	Revise the LU specification.
KAIC08013-E	An attempt to execute a request has failed. When "*option name*" is specified, "*option name*" must also be specified.	Revise the request, and then try again.
KAIC08014-E	This storage system does not support batch operations on LUs.	Check the storage system.
KAIC08015-E	Batch creation is not possible for LUs whose emulation is not OPEN-V.	Revise the emulation type specification.
KAIC08016-E	The request syntax is incorrect. The attribute "*attribute-name*" is not specified in the element "*element-name*".	Revise the request syntax, and then try again.
KAIC08017-E	The request syntax is incorrect. The value "*attribute-value*" (specified for the attribute "*attribute-name*" in the element "*element-name*") is duplicated.	Revise the request syntax, and then try again.
KAIC08018-E	The request syntax is incorrect. The attribute "*attribute-name*" is not specified in the element "param" (name = "*element-name*").	Revise the request syntax, and then try again.
KAIC08019-E	Execution of the request failed. The value "*attribute-value*" (specified for "Type" in the parameter "*parameter-name*") is invalid.	Revise the request syntax, and then try again.

Message ID	Message Text	Description
KAIC08020-E	Execution of the request failed. The value "*attribute-value*" (specified for "value" in the parameter "*parameter-name*") is invalid. Specify the value as "*valid-values (only "2")*".	Revise the request syntax, and then try again.
KAIC08021-E	Execution of the request failed. The value "*attribute-value*" (for "value" in the parameter "*parameter-name*") is invalid. Specify a value that is no more than "*max-character-string-length*" characters.	Revise the request syntax, and then try again.
KAIC08022-E	Execution of the request failed. The value "*attribute-value*" (for attribute "*attribute-name*" in element "*element-name*") is invalid.	Revise the request syntax, and then try again.
KAIC08023-E	Execution of the request failed. If the parameter "*parameter-name*" is specified, the parameter "*parameter-name*" must also be specified.	Revise the request syntax, and then try again.
KAIC08024-E	Execution of the request failed. The value "*attribute-value*" (for "value" in the parameter "*parameter-name*") is invalid. Specify a size that is within the free-disk space of "InPool".	Revise the request syntax, and then try again.
KAIC08025-E	The request syntax is incorrect. The invalid attribute "*attribute-name*" is specified in the element "*parameter-name*".	Revise the request syntax, and then try again.
KAIC08026-E	The request syntax is incorrect. The child element "ArrayValue" must be specified for the parameter "*parameter-name*".	Revise the request syntax, and then try again.
KAIC08027-E	Execution of the request failed. The value "*attribute-value*" (for the attribute "value" of the child element "ArrayValue" in the parameter "*parameter-name*") is invalid.	Revise the request syntax, and then try again.
KAIC08028-E	An attempt to execute a request has failed. The number of child elements for parameters "*parameter-name*" and "*parameter-name*" are not the same.	Revise the request syntax, and then try again.

Message ID	Message Text	Description
KAIC08029-E	The request has failed. The *PP Name* pair could not be created in the specified storage system.	Revise the request, and then retry the operation.

KAIC08124-E	An LDEV whose emulation type is "*emulation type*" cannot be used as a source or target volume.	Revise the request.
KAIC08125-E	All the *device kind*s that make up a *target* must have the same resource group.	Revise the *device kind*.
KAIC08126-E	"*target*" does not exist.	Specify an "*target*" that exists in the DeviceManager.

Message ID	Message Text	Description
KAIC08127-E	"*target*" already set a relation.	Verify the relation state of object, and specify object which is without a relation.
KAIC08128-E	"*target*" already released a relation.	Verify the relation state of object, and specify object which is with a relation.
KAIC08129-E	"*target*" already exists.	Sspecify an "*target*" that does not exist in the DeviceManager.
KAIC08130-E	Invalid parameter: "*target*"	Make sure that the parameter is valid.
KAIC08131-E	The tiering policy "*tiering policy*" is invalid. Specify a value from *minimum-value* to *maximum-value*.	Specify a valid tiering policy, and then try again.
KAIC08132-E	Tiering policies are not supported on the specified storage system microcode version.	Verify the storage system microcode version.
KAIC08133-E	A required parameter is not specified. Specify either attribute "*attribute-name-1*" of element "*element-name-1*" or attribute "*attribute-name-2*" of element "*element-name-2*".	Specify the required parameters, and then try again.
KAIC08134-E	The specified volume (*DevNum*) cannot be used as a source or target volume because a data placement profile has been applied.	Release the data placement profile, and then retry the operation.
KAIC08135-E	You can execute only a single operation at the same time on all specified pools.	Revise the operation parameters of all specified pools.
KAIC08136-E	All of the specified pools must belong to the same storage system.	If multiple pools are specified, make sure that all of the specified pools belong to the same storage system.
KAIC08137-E	The request failed for the following pools. (*failed poolID*)	Check the state of the pools for which the request failed.
KAIC08138-E	This operation cannot be performed on pools that are not managed by using tiers (*failed poolID*).	Specify only pools that are managed by using tiers.
KAIC08139-E	This operation cannot be performed on more than 128 pools.	Specify no more than 128 pools.
KAIC08140-E	You cannot execute this operation for pool (*PoolID*) for which tier management is not set to manual.	Set the tier management of the pool to manual.

Message ID	Message Text	Description
KAIC08141-E	A parameter is not specified. Specify one of the following: "*attribute-name-1*", "*attribute-name-2*", or "*attribute-name-3*".	Specify the required parameter.
KAIC08142-E	The tier relocation "*tier relocation*" is not valid. Specify "*0*" or "*1*".	Specify a valid tier relocation.
KAIC08143-E	The specified host "*host-name*" is already in use.	Specify the `overwrite` option or revise the host name and retry.
KAIC08144-E	The specified host "*host-name*" cannot be changed because it was not added manually.	Revise the host specification and retry.
KAIC08145-E	osType "*osType*" cannot be specified for the specified host "*host-name,*".	Revise the osType specification and retry.
KAIC08146-E	The number of specified hosts is too large.	Specify the number of hosts as "*count*" or fewer.
KAIC08147-E	If multiple "*element-name-1*" elements are specified, the "*attribute-name*" attribute of the "*element-name-2*" element must also be specified.	Revise the request and retry.
KAIC08148-E	All child "*element-name*" elements must be the same.	Revise the request and retry.
KAIC08149-E	If the "*element-name-1*" element is specified, the "*attribute-name*" attribute of the "*element-name-2*" element cannot be specified.	Revise the request and retry.
KAIC08150-E	Multiple "*element-name-2*" elements cannot be specified as child elements of the "*element-name-1*" element.	Revise the request and retry.
KAIC08151-E	If multiple "*element-name*" elements are specified, "*attribute-name-1*" and "*attribute-name-2*" elements cannot be specified.	Revise the request and retry.
KAIC08152-E	If the "*element-name-1*" element is specified, the "*attribute-name*" attribute of the "*element-name-2*" element must also be specified.	Revise the request and retry.
KAIC08153-E	If multiple "*element-name-1*" elements are specified, the "*element-name-2*" element cannot be specified.	Revise the request and retry.

Message ID	Message Text	Description
KAIC08154-E	If the "*element-name*" element is unique, the parent element must also be unique.	Revise the request and retry.
KAIC08155-E	If multiple "*element-name-1*" elements are specified, the "*attribute-name*" attribute of the "*element-name-2*" element cannot be specified.	Revise the request and retry.
KAIC08156-E	A response cannot be sent because there are more than 4,096 resources (logical groups, hosts, logical units) to return. (logical groups: "*logicalGroupNum*", hosts: "*hostNum*", logical units: "*logicalUnitNum*") Verify the numOfHosts and numOfLUs values, separate the request into requests that are less than 4,096 resources each, and retry.	Verify the numOfHosts and numOfLUs values, separate the request into requests that are less than 4,096 resources each, and retry.
KAIC08157-E	A response cannot be sent because there are more than 4,096 resources (logical groups, hosts, logical units) to return. Verify the numOfHosts and numOfLUs values, separate the request into requests that are less than 4,096 resources each, and retry.	Verify the numOfHosts and numOfLUs values, separate the request into requests that are less than 4,096 resources each, and retry.
KAIC08158-E	A database error occurred during collection of performance data. (resource name = "*resourceName*")	A detailed investigation to determine the cause of the problem is required. Collect error information and contact the Support Center.
KAIC08159-E	Collection of Tuning Manager data failed. (resource name = "*resourceName*", host name = "*hostName*", protocol = "*protocol*", port number = "*portNumber*", agent name = "*agentName*")	Ensure that Tuning Manager is connected to the agent, and the Tuning Manager server is running. If this problem continues, collect the error information and contact the Support Center.
KAIC08160-E	The external volume tier rank *specified external volume tier rank* is not valid. Specify either: *2* (High), *1* (Middle), or *0* (Low).	Specify a valid external volume tier rank.
KAIC08161-E	The target storage system does not support the external volume tier rank. (microcode version = *microcode version*)	Verify the storage system microcode version.
KAIC08162-E	Tier rank configuration and external pool volume reduction	Revise the command option.

Message ID	Message Text	Description
	cannot be performed at the same time.	
KAIC08163-E	The specified volume (*device number*) is not a pool volume of (*poolID*).	Specify the pool volume for (*poolID*).
KAIC08164-E	The external volume tier rank cannot be specified because the specified volume (*device number*) is not an external pool volume.	Specify an external pool volume as the tier rank.
KAIC08165-E	Device Manager does not support the agent and the agent data model. (resource name = "*resourceName*", host name = "*hostName*", protocol = "*protocol*", port number = "*portNumber*", agent name = "*agentName*")	Check which agent and agent data model versions are supported by Device Manager for collecting data. See the Tuning Manager manual for information.
KAIC08166-E	The specified storage system does not support the tiering policy configuration. (microcode version = *microcode version of the specified storage system*)	Verify the microcode version of the storage system.
KAIC08167-E	No parameters are specified for the "*element name*" element. Specify one of the following attributes: "*attribute name 1*", "*attribute name 2*", "*attribute name 3*", or "*attribute name 4*".	Specify the required parameters, and then try again.
KAIC08168-E	The specified tiering policy does not exist in the Device Manager database.	Specify a valid tiering policy, and then try again.
KAIC08169-E	The allocation threshold specified for the tiering policy is not valid. Specify a value in the range from *minimum value* to *maximum value* in the interval *interval*.	Specify a valid allocation threshold for the tiering policy, and then try again.
KAIC08170-E	The upper or lower limit for the allocation threshold of the tiering policy is not valid. Specify an upper limit that is equal to or greater than the lower limit.	Specify valid upper and lower limits for the tiering policy allocation threshold, and then try again.
KAIC08171-E	A lower limit specified for the tiering policy allocation threshold is not valid. Specify values so that the sum of the lower limit values for tier 1 and tier 3 is less than or equal to *maximum value*.	Specify valid lower limit values for the tiering policy allocation threshold, and then try again.
KAIC08172-E	An attempt to execute the request has failed. Multiple pairs	Revise the request, and then retry the operation.

Message ID	Message Text	Description
	for one P-VOL of *PP Name* cannot be restored at the same time.	
KAIC08173-E	The storage system whose microcode version is *microcode version* could not be set as a *PP name (Global Active Device)* pair volume, because the specified LU (device number *device number*) is not *volume attribute* of *PP name*. Only a storage system whose microcode version is *microcode version* or later can be set as a pair volume.	To complete this task, upgrade to the current microcode version.
KAIC08174-E	The request could not be completed because the primary volume and secondary volume of the *PP name (Global Active Device)* pair to be created do not meet any of the following conditions: (1) The attribute of the volumes is *Volume attribute* of *PP name*. (2) Both volumes are internal volumes. (3) Both volumes are external volumes. Check and, if necessary, revise the primary volume and secondary volume of the *PP name (Global Active Device)* pair to be created, and then try again.	Check and, if necessary, revise the primary volume and secondary volume of the *PP name (Global Active Device)* pair to be created, and then try again.
KAIC08176-E	The request failed. The name of the specified Snapshot Group contains an invalid character. Device Manager cannot handle a Snapshot Group name that contains characters other than the following: 0-9 a-z A-Z , - . / : @ \ _	To add a pair, select a different SnapshotGroup. In other cases, perform the operation by using the management tool that was used to add the specified pair.
KAIC08177-E	The tier relocation speed is invalid. Specify a value from *minimum-value* to *maximum-value*.	Specify a valid tier relocation speed, and then try again.
KAIC08178-E	A volume of RAID level *RAID level* cannot be used as a pool volume of *PP name (Dynamic Provisioning)*. (device number = *device number*)	Revise the volume specifications, and then try again.
KAIC08180-E	Device Manager does not support requests that specify the lba attribute of the LDEV element in the specified storage system.	Revise the request, and then try again.
KAIC08181-E	A parameter is not specified. Specify one of the following attributes: "*attribute-name-1*",	Specify the required parameters, and then try again.

Message ID	Message Text	Description
	"*attribute-name-2*", "*attribute-name-3*" or "*attribute-name-4*".	
KAIC08182-E	You cannot combine the specified platform (*platform-name*) and middleware (*middleware-name*).	Revise the request, and then try again.
KAIC08183-E	You cannot combine the specified platform (*platform-name*), alternate path (*alternatepath-name*), and failover (*failover-name*).	Revise the request, and then try again.
KAIC08184-E	The value (parameter="*parameter-name*", value="*value*") is invalid for the specified storage system.	Revise the request, and then try again.
KAIC08185-E	This microcode version *microcode-version* of the storage system does not support automatically choosing host mode and host mode2 options.	Make sure the microcode version of the storage system is correct.
KAIC08186-E	You cannot specify more than one Snapshot Group.	Check the request, revise if needed, and retry again.
KAIC08187-E	A parameter is not specified : SnapshotGroup "objectID" or "groupName".	Specify either "objectID" or "groupName" for SnapshotGroup.
KAIC08188-E	You cannot perform this task because the specified group is a Consistency Group.	You cannot add a pair to a Consistency Group. Specify a Snapshot Group that is not a Consistency Group.
KAIC08189-E	You cannot run this command. You must enable the user authentication mode for all the command devices to be recognized by the specified host (hostname="*Host-name*", hostid="*Host-ID*).	Make sure that you enable the user authentication mode for all the command devices recognized by the host, and then run the "`HiScan`" command from the host agent.
KAIC08190-E	The volume "*device-number*" cannot be used for a journal volume because it is not a "*volume-attribute*" of "*PP Name*".	Revise the volume specification, and then retry the operation.
KAIC08191-E	A volume whose capacity is less than *capacity* cannot be used as a Quorum Disk. Specify a volume whose capacity is at least *capacity*.	Specify a volume whose capacity is at least *capacity*.
KAIC08192-E	The quorum disk ID could not be set, because the families of the storage systems that are to share the quorum disk are different. Revise the specified storage systems.	Revise the specified storage systems.

Message ID	Message Text	Description

	number is the same as the virtual ID of a volume undergoing a data migration that uses virtual IDs. Check and, if necessary, revise the specified host group or wait for the data migration to finish, and then try again.	
KAIC08283-E	The operation cannot be performed because the specified port (*Port name*) includes a volume whose device number is the same as the virtual ID of a volume undergoing a data migration that uses virtual IDs. Check and, if necessary, revise the specified port or wait for the data migration to finish, and then try again.	Check and, if necessary, revise the specified port or wait for the data migration to finish, and then try again.
KAIC08284-E	The operation cannot be performed because the specified parity group (*Parity group name*) includes a volume whose device number is the same as the virtual ID of a volume undergoing a data migration that uses virtual IDs. Check and, if necessary, revise the specified parity group or wait for the data migration to finish, and then try again.	Check and, if necessary, revise the specified parity group or wait for the data migration to finish, and then try again.
KAIC08285-E	The size of the SLU to be created exceeds the maximum volume size for the storage container specified for "*attribute name*".	Check and, if necessary, make changes. Then, try again.
KAIC08286-E	The size of the SLU to be created exceeds the free space of the storage container specified for "*attribute name*".	Either increase the free space of the storage container or specify less space than the free space of the storage container. Then, try again.
KAIC08287-E	No relationship between the ALU and the specified host exists.	Register the relationship between the ALU and the specified host, then try again.
KAIC08288-E	The number specified for "*element name*" exceeds *maximum value*.	Change the number specified for "*element name*" to a lower value, and then try again.
KAIC08289-E	Either "*attribute name*" or "*attribute name*" is not specified. You must specify both "*attribute name*" and "*attribute name*".	Check and, if necessary, make changes. Then, try again.
KAIC08290-E	Because the SLU is bound to an ALU, the task cannot be completed.	Check and, if necessary, revise the specification of the SLU, or unbind the SLU, and then try again.

Message ID	Message Text	Description
KAIC08291-E	SLU shrinking cannot be performed.	Check and, if necessary, make changes. Then, try again.
KAIC08292-E	The value specified for "*attribute name*" is not a multiple of the value of "*attribute name*".	Check and, if necessary, make changes. Then, try again.
KAIC08293-E	The capability profile that matches the specified combination of "profileID" and "generationId" was not found in the Device Manager database.	Check and, if necessary, make changes. Then, try again.
KAIC08294-E	Processing cannot be performed because the value specified for "*element name*" (*attribute name = attribute value*) is "*element type*".	Check and, if necessary, make changes. Then, try again.
KAIC08295-E	Processing cannot be performed because the value specified for "*element name*" (*attribute name = attribute value*) is not "*element type*".	Check and, if necessary, make changes. Then, try again.
KAIC08301-E	The operation cannot be performed because virtual LDEV information is already allocated to the specified virtual LDEV. (device number of the specified virtual LDEV = *Device number*)	Specify a different virtual LDEV, and then try again.
KAIC08302-E	The number of resource groups in the specified storage system exceeds the maximum number (*Maximum number*) of resource groups.	Specify a different storage system or delete unnecessary resource groups and try again.
KAIC08303-E	The specified name of resource group (*Name*) is in use.	Specify a name that is not being used in the storage system and try again.
KAIC08304-E	The maximum number of virtual storage machines in the specified storage system is *Maximum number*.	Specify a different virtual model, virtual serial number, and storage system, or delete unnecessary virtual resource groups, and then try again.
KAIC08305-E	The specified resource group (name = *Resource group name*) cannot be deleted because the resource group contains resources.	Specify a different resource group or move the resources that are inside the specified resource group and try again.
KAIC08306-E	The operation cannot be performed because no virtual LDEV information is allocated to the specified virtual LDEV. (device number of the specified virtual LDEV = *Device number*)	Specify a different virtual LDEV, and then try again.

Message ID	Message Text	Description
KAIC08307-E	The operation cannot be performed because no virtual LDEV information is allocated to the specified virtual LDEV. (device number of the specified virtual LDEV = *Device number*)	Specify a different resource group or move the LDEV IDs that are inside the resource group and try again.
KAIC08308-E	The specified resource group (name = *Resource group name*) cannot be deleted because the resource group has host group numbers.	Specify a different resource group or move the host group numbers that are inside the resource group and try again.
KAIC08309-E	The specified resource group (name = *Resource group name*) cannot be deleted because the resource group has ports that have a virtual ID.	Specify a different resource group, and then try again.
KAIC08310-E	The specified target resource group was not found. Revise your specification, and then try again.	Revise your selection, and then try again.
KAIC08311-E	The source resource group is not in the source storage system (*name of source storage system*). Revise your selection, and then try again.	Revise your selection, and then try again.
KAIC08312-E	The virtual LDEV cannot be added because the specified virtual device number (*Device number*) is already in use by another virtual LDEV in the same virtual storage machine.	Specify a virtual device number that is not being used, and then try again.
KAIC08313-E	The specified parity group (chassis number = *Chassis number*, parity group number = *Parity group number*) cannot be operated because it is not managed by the resource group.	Specify a different parity group.
KAIC08314-E	You cannot perform this operation on LDEV IDs that belong to resource groups other than those for the default virtual storage machine.	Specify a different LDEV ID or operation for the virtual LDEV.
KAIC08315-E	The specified virtual LDEV (device number = *Device number*) cannot be moved because it already belongs to the specified resource group.	Specify a different resource group and virtual LDEV, and then try again.
KAIC08316-E	The modifyPRPU:false option is specified, but the specified operation cannot be performed because the resource group that contains the specified virtual	Specify a different resource group and virtual LDEV, and then try again.

Message ID	Message Text	Description
	LDEV (device number = *Device number*) is different from the specified resource group.	
KAIC08317-E	The specified operation cannot be performed because a virtual ID is already allocated for the specified virtual LDEV (device number = *Device number*).	Specify a different virtual LDEV, and then try again.
KAIC08318-E	The operation cannot be performed because a virtual ID is not allocated for the specified virtual LDEV (device number = *Device number*).	Specify a different virtual LDEV, and then try again.
KAIC08319-E	A target resource for the operation is not specified.	Specify the target resource for the operation, and then try again.
KAIC08320-E	The specified parity group (chassis number = *Chassis number*, parity group number = *Parity group number*) cannot be moved because it already belongs to the specified resource group.	The specified parity group (chassis number = *Chassis number*, parity group number = *Parity group number*) cannot be moved because it already belongs to the specified resource group.
KAIC08321-E	The host group number (port ID = *Port ID*, domain ID = *Domain ID*) is specified more than once.	Specify a different host group number, and then try again.
KAIC08322-E	The specified operation cannot be performed because the host group number (port ID = *Port ID*, domain ID = *Domain ID*) belongs to a port that has a virtual ID.	Specify a different host group number, and then try again.
KAIC08323-E	The specified host group number (port ID = *Port ID*, domain ID = *Domain ID*) cannot be moved because it already belongs to the specified resource group.	Specify a different host group number and resource group, and then try again.
KAIC08324-E	The specified operation cannot be performed because there is a virtual LDEV that corresponds to the specified LDEV ID (device number = *Device number*).	Specify a different LDEV ID or change the target of the operation to the virtual LDEV, and then try again.
KAIC08325-E	The specified LDEV ID (device number = *Device number*) cannot be moved because it already belongs to the specified resource group.	Specify a different LDEV ID and resource group, and then try again.
KAIC08326-E	The specified virtual LDEV (device number = *Device number*) cannot be moved to a resource group in another virtual storage machine because a path is set for the LDEV ID.	Specify a different virtual LDEV and resource group or delete all of the paths for the specified virtual LDEV, and then try again.

Message ID	Message Text	Description
KAIC08327-E	This operation cannot move LDEV IDs to a resource group other than that for the default virtual storage machine.	Specify a different LDEV ID or operation for the virtual LDEV.
KAIC08328-E	A port is specified more than once. (port ID = *Port ID*)	Specify a different port, and then retry the operation.
KAIC08329-E	The specified operation cannot be performed because the specified port has a virtual ID. (port ID = *Port ID*)	Specify a different port, and then retry the operation.
KAIC08330-E	The specified port (port ID = *Port ID*) cannot be moved because the port already belongs to the specified resource group.	Specify a different port and resource group, and then try again.
KAIC08331-E	The specified resource group (name = *Resource group name*) cannot be deleted because the resource group has parity groups.	Specify a different resource group or move the parity groups that are inside the resource group, and then try again.
KAIC08332-E	The specified name (*Name*) is invalid because it includes one or more invalid characters.	Specify a different name, and then retry the operation.
KAIC08333-E	The specified resource group (name = *Resource group name*) cannot be deleted because the resource group has a port.	Specify a different resource group, or move the ports that are inside the resource group, and then try again.
KAIC08334-E	The target resource group is not in the target storage system. Revise your selection, and then try again.	Revise your selection, and then try again.
KAIC08335-E	The resource group mappings of the source resource group (*name of source resource group*) and target resource group (*name of target resource group*) are duplicated. Revise the specified resource groups, and then try again.	Revise the specified resource groups, and then try again.
KAIC08336-E	The specified operation cannot be performed for the specified resource group (name = *Resource group name (meta_resource)*).	Specify a different resource group, and then try again.
KAIC08337-E	The specified parameters are incorrect. The "*Attribute 1*" attribute of the "*Element 1*" element and the "*ttribute 2*" attribute of the "*Element 2*" element cannot be specified at the same time.	Check and, if necessary, revise the parameters.

Message ID	Message Text	Description
KAIC08338-E	The virtual LDEV cannot be added because a virtual LDEV that is using the specified device number (*Device number*) already exists.	Specify a different device number, and then retry the operation.
KAIC08339-E	The specified virtual LDEV (device number = *Device number*) cannot be added because the virtual LDEV does not belong to the specified resource group.	Specify a different device number, and then try again.
KAIC08340-E	The specified parity group cannot be moved because it forms part of a distributed parity group. (chassis number of the specified parity group = *Chassis number*, parity group number of the specified parity group = *Parity group number*)	Specify all of the parity groups that make up the distributed parity group, and then try again.
KAIC08341-E	The specified operation cannot be performed because the port that belongs to the specified host group number (port ID = *Port ID*, domain ID = *Domain ID*) is neither "Target" or "RCU Target".	Specify a different host group number, and then try again.
KAIC08342-E	The specified *LDEV ID or virtual LDEV* cannot be moved because it is a pool volume that forms part of a pool. (device number of specified *LDEV ID or virtual LDEV* = *Device number*, pool ID = *Pool ID*)	Specify all the pool volumes that form the pool, and then try again.
KAIC08343-E	The specified *LDEV ID or virtual LDEV* cannot be moved because it is a journal volume that forms part of a journal group. (device number of specified *LDEV ID or virtual LDEV* = *Device number*, journal group ID = *Journal group ID*)	Specify all the journal volumes that form the journal group, and then try again.
KAIC08344-E	The modifyPRPU:false option is specified, but the specified operation is not possible because the virtual LDEV (device number = *Device number*) does not belong to the default virtual storage machine.	Specify a different volume or option, and then try again.
KAIC08345-E	The specified operation cannot be performed because the specified virtual LDEV (device number = *Device number*) is used for a secondary volume of *PP name (Global Active-Device)*.	Specify a different device number, and then try again.

Message ID	Message Text	Description
KAIC08346-E	The specified operation cannot be performed because the specified virtual LDEV (object ID = *Object ID*) is used for a secondary volume of *PP name (Global Active-Device)*.	Specify a different virtual LDEV, and then try again.
KAIC08347-E	The operation cannot be performed because the specified LDEV ID (device number = *Device number*) belongs to a resource group that has volumes in the process of data migration that uses virtual IDs.	Specify a different LDEV ID or migrate the data, and then try again.
KAIC08348-E	The operation cannot be performed because the specified host group number belongs to a resource group that has volumes in the process of data migration that uses virtual IDs.	Specify a different host group number or migrate the data, and then try again.
KAIC08349-E	The operation cannot be performed because the resource group to which the specified port belongs contains volumes that are in the process of a data migration for which virtual IDs are in use. (port ID = *Port ID*)	Either specify a different port, or complete the data migration. After that, retry the operation.
KAIC08350-E	The specified name (*Name*) is too long. The name must be *Maximum length* or fewer characters.	Specify a different name, and then try again.
KAIC08351-E	The specified name (*Name*) is invalid. A blank character cannot be used at the start or end of the resource group name.	Specify a different name, and then try again.
KAIC08352-E	The operation cannot be performed because the specified resource group (name=*Name*) has volumes in the process of data migration that uses virtual IDs.	Specify a different resource group, or migrate the data, and then try again.
KAIC08353-E	The specified resource group (name = *Resource group name*) cannot be deleted because there is a host group number (port ID = *Port ID*, domain ID = *Domain ID*) that belongs to a port that has a virtual ID.	Specify a different host group number, and then try again.
KAIC08354-E	The resource group mappings of the source resource group (*name of source resource group*) and target resource group (*name of target resource group*) already	Revise the specified resource groups, and then try again.

Message ID	Message Text	Description
	exist. Revise your resource group specification, and then try again.	
KAIC08355-E	The specified resource group (objectID = *Object ID*) does not belong to the specified storage system.	Specify a resource group that belongs to the storage system.
KAIC08356-E	No usable virtual device number exists.	Create one or more usable virtual device numbers. By unallocating a virtual device number from an unused volume, you can use that virtual device number.
KAIC08357-E	The number of the specified resource groups exceeds the maximum number that can be specified.	Reduce the number of specified resource groups or delete unnecessary resource groups, and then try again.
KAIC08358-E	The specified name (*Name*) cannot be used as a resource group name because the specified name is a reserved word (*Reserved word*).	Specify a resource group that does not contain reserved words.
KAIC08359-E	An element to be changed is not specified for the specified resource group.	Specify a resource group name or a resource to be changed, and then try again.
KAIC08360-E	The specified host group number (port ID = "*Port ID*", domain ID = "*Domain ID*") cannot be moved to another virtual storage machine because a path is set to the host group number.	Specify a different host group number or delete the paths, and then try again.
KAIC08361-E	The number of resource groups that can be registered in the virtual storage machine (virtual model: *Virtual model*, virtual serial number: *Virtual serial number*) exceeds the maximum number (*Maximum number (1024)*).	Reduce the number of resource groups to be added to the specified virtual storage machine or delete resource groups that were already created, and then try again.
KAIC08362-E	The specified resource group does not belong to the specified storage system.	Specify a different resource group, and then try again.
KAIC08363-E	In the default virtual storage machine, virtual LDEV information cannot be allocated to a virtual LDEV whose device number and virtual device number are the same. (device number of the virtual LDEV = *Device number*)	Either assign a virtual device number that differs from the device number, or do not specify virtual LDEV information, and then try again.
KAIC08364-E	The specified virtual LDEV (device number = *Device number*) cannot be moved to a resource group in	Specify a different virtual LDEV or delete a virtual device number

Message ID	Message Text	Description
	another virtual storage machine because the virtual LDEV is allocated to a virtual device number (*Virtual device number*).	from a virtual LDEV, and then try again.
KAIC08365-E	This operation for the specified virtual LDEV (device number = *Device number*) cannot be perform because the cancellation of a virtual device number and the allocation of virtual LDEV information cannot be specified at the same time.	Specify a different virtual LDEV, and then try again.
KAIC08366-E	The virtual LDEV information of the specified virtual LDEV (device number = *Device number*) cannot be allocated because a path is set for the virtual LDEV.	Specify a different virtual LDEV or delete the paths, and then try again.
KAIC08367-E	The virtual LDEV information of the specified virtual LDEV (device number = *Device number*) cannot be deleted because a path is set for the virtual LDEV.	Specify a different virtual LDEV or delete the paths, and then try again.
KAIC08368-E	The specified resource group (name = *Resource group name*) cannot be deleted because the resource group includes a virtual LDEV (device number = *Device number*) that is used for a secondary volume of *PP name (Global Active-Device)*.	Specify a different resource group, and then try again.
KAIC08369-E	The specified resource group (name = *Resource group name*) cannot be deleted because the resource group has a virtual LDEV (device number = *Device number*) with a path that is set.	Check the virtual LDEV in the resource group, delete the paths, and then try again.
KAIC08370-E	The specified operation cannot be performed because a path is set for the specified virtual LDEV (device number = *Device number*).	Specify a different virtual LDEV or delete all of the paths for the specified virtual LDEV, and then try again.
KAIC08371-E	The operation cannot be performed because the specified resource belongs to a resource group that is being used by a data migration for which virtual IDs are in use. (device number of the specified resource = *Device number of the specified resource*)	Specify a different device number, and then try again.
KAIC08372-E	The operation cannot be performed because the virtual device number of the specified	Specify a different device number, and then try again.

	migration-target volume) is duplicated. Revise your selection, and then try again.	
KAIC08437-E	The source volume (devnum = *devnum of source volume*) already exists in the Device Manager database. Revise your selection, and then try again.	Revise your selection, and then try again.
KAIC08438-E	The target volume (devnum = *devnum of target volume*) already exists in the Device Manager database. Revise your selection, and then try again.	Revise your selection, and then try again.
KAIC08439-E	The migration-target volume (devnum = *devnum of migration-target volume*) already exists in the Device Manager database. Revise your selection, and then try again.	Revise your selection, and then try again.
KAIC08440-E	The source volume (devnum = *devnum of source volume*, emulation type = "*emulation type of source volume*") cannot be migrated. The emulation type of the source volume must be OPEN-V or OPEN-3/8/9/E/K/L.	-
KAIC08441-E	The source volume (devnum = *devnum of source volume*) is non-representative, and therefore cannot be migrated. If you want to specify a LUSE volume, specify a representative volume, and then try again.	If you want to specify a LUSE volume, specify a representative volume, and then try again.
KAIC08442-E	Execution of the request failed. For the *Replication function* pair, you must specify "Never" for fenceLevel.	Check and, if necessary, revise the specified value, and then try the operation again.
KAIC08443-E	The quorum disk corresponding to the specified ID (*Quorum disk ID*) does not exist in the storage system. (model name = *Model name*, serial-number = *Serial number*)	Specify a different quorum disk ID or add the quorum disk to the storage system, and then try the operation again.
KAIC08444-E	Execution of the request failed. You cannot specify volumes that belong to the resource group of the default virtual storage machine for both the P-VOL and the S-VOL of the *Replication function*pair.	Check and, if necessary, revise the specified value, and then try the operation again.

Message ID	Message Text	Description
KAIC08445-E	Execution of the request failed. The volume (device number = *Device number*) specified for the P-VOL of the *Replication function* pair is invalid, because it has not been assigned a virtual ID.	Assign a virtual ID to the volume, and then try the operation again.
KAIC08446-E	Execution of the request failed. The volume (device number = *Device number*) specified for the P-VOL is invalid, because the volume is reserved for the S-VOL of *Replication function*.	Check and, if necessary, revise the specified volume, and then try the operation again.
KAIC08447-E	Execution of the request failed. The volume (device number = *Device number*) specified for the S-VOL is invalid, because it is not reserved as a S-VOL for *Replication function*.	Reserve the volume, and then try the operation again.
KAIC08448-E	Execution of the request failed. The volume (device number = *Device number*) specified for the *Replication function* pair is invalid, because the volume belongs to a virtual storage machine whose serial number is different from that of the storage system that manages the replication volume.	Check and, if necessary, revise the specified value, and then try the operation again.
KAIC08449-E	Execution of the request failed. The volume (device number = *Device number*) specified for the *Replication function* pair is invalid, because it is a pair volume of *Replication function*.	Check and, if necessary, revise the specified value, and then try the operation again.
KAIC08450-E	Execution of the request failed. The volume (device number = *Device number*) specified for the *Replication function* pair is invalid, because the capacity of the volume is greater than *Capacity*. Specify a volume whose capacity is *Capacity* or less.	Specify a volume whose capacity is *Capacity* or less.
KAIC08451-E	Execution of the request failed. The remote path between the local storage system and the remote storage system is not "CU Free".	Check and, if necessary, revise the remote path.
KAIC08452-E	The specified resource group (name = *Resource group name*) cannot be deleted because there is a host group number (port	Specify a different resource group.

Message ID	Message Text	Description
	name = *Port name*, number = *Host group number*) that belongs to a port that has a virtual ID.	
KAIC08453-E	The specified operation cannot be performed because the host group number (port name = *Port name*, number = *Host group number*) belongs to a port that has a virtual ID.	Specify a different host group number, and then try again.
KAIC08454-E	The specified operation cannot be performed because the port has a virtual ID. (name = *Port name*)	Specify a different port, and then try again.
KAIC08455-E	The operation is not possible because the volume (*LDEV-identifier (devNum)*) is not reserved as an S-VOL.	Choose a volume that is reserved as an S-VOL, and then try again.
KAIC08456-E	The operation is not possible because the volume (*LDEV-identifier (devNum)*) has a virtual device number.	Remove the virtual device number, and then try again.
KAIC08457-E	Invalid parameters were specified. If the volume is to be reserved as an S-VOL, you cannot set a virtual device number.	Specify either a virtual device number or a volume reserved as an S-VOL, but not both, and then try again.
KAIC08458-E	The specified operation is not possible because the virtual LDEV (device number = *Device number*) does not belong to the default virtual storage machine.	Specify a different virtual LDEV, and then try again.
KAIC08459-E	This operation cannot be performed, because the specified volume (device number = *Device number*) is a pair volume of *PP name*.	Check and, if necessary, revise the specified volume or delete the pair, and then try the operation again.
KAIC08460-E	This operation cannot be performed, because the specified volume (device number = *device number*) is a reserved volume of *PP name*.	Revise the specified volume or delete the pair, and then try again.
KAIC08461-E	The LU "*device-number*" cannot be used for a pool volume/journal volume because it is a reserved volume of "*PP Name*".	Revise the LU specification, and then retry the operation.
KAIC08462-E	The last path of an LU (devNum = *PP name*) set for *device number* cannot be deleted.	Release the *device number* pair, and then delete the path.
KAIC08463-E	You cannot set a command device for the pair volume of *PPName*.	Check and, if necessary, revise the volume settings, and then try the operation again.

Message ID	Message Text	Description
KAIC08464-E	You cannot set a command device for the reserved volume of *PPName*.	Revise the configuration, and then try again.
KAIC08465-E	This operation cannot be performed because the specified volume (device number = *Device number*) is an S-VOL of *Program product name*.	Revise the specified volume or delete the pair, and then try again.
KAIC08466-E	No remote path is set between the specified storage systems, or an invalid remote path is set.	Check the status of the remote path, and then try again.
KAIC08467-E	The source volume (devnum = *devnum of source volume*) is a command device, and therefore cannot be migrated. If you want to use a command device in the target storage system, create the command device in the target storage system.	If you want to use a command device in the target storage system, create the command device in the target storage system.
KAIC08468-E	The source volume (devnum = *devnum of source volume*) is a system disk, and therefore cannot be migrated.	This is an informational message only. No additional action is required.

Message ID	Message Text	Description
KAIC08497-E	The update of the migration project information was interrupted. The Device Manager server might be shutting down. Check the status of the Device Manager server, and then try again.	The Device Manager server might be shutting down. Check the status of the Device Manager server, and then try again.
KAIC08498-E	The source volume (devnum = *devnum of source volume*) cannot be migrated because it is being used as a volume of the pair.	This is an informational message only. No additional action is required.
KAIC08499-E	The volume (devnum = *devnum of target volume*) cannot be specified as a target volume because it is part of a pair. Revise the specified target volume, and then try again.	Revise the specified target volume, and then try again.
KAIC08500-E	You cannot perform a migration using virtual IDs because the cache mode for the target volume (devNum = *Device number*) of the target storage system (*Storage system name*) is set to Through. Change the cache mode to Write Sync, and then try again.	Change the cache mode to Write Sync, and then try again.
KAIC08501-E	You cannot perform a migration using virtual IDs because no path is allocated to the specified volume (devNum = *Device number*) of the target storage system (*Storage system name*). Allocate a path to the target volume, and then try again.	Allocate a path to the target volume, and then try again.
KAIC08502-E	One or more paths are allocated to the source volume (devNum = *Device number*) of the source storage system (*Storage system name*). Remove all paths from the source volume, and then try again.	Remove all paths from the source volume, and then try again.
KAIC08503-E	This operation (*PP Name*) cannot be performed on the specified target volume (devNum = *TargetDevNum*) because the journal pool (PoolID = *Pool ID*) has insufficient free space. Increase the free space, and then try again.	Increase the free space of the journal pool, and then try again.
KAIC08504-E	This operation (*PP Name*) cannot be performed on a microcode version of the specified storage	Perform the operation again.

Message ID	Message Text	Description
	system when the number of requests exceeds *Number of requests to be operated at a time*. Perform the operation again.	
KAIC08505-E	To create multiple external parity groups in a batch, all data migration settings that use virtual IDs must be the same.	Check and, if necessary, revise the volume type setting of the parity group, and then try again.
KAIC08506-E	The microcode version of the specified storage system (storage system name = "*Storage system name*") does not support data migration operations using virtual IDs. Microcode version "*Microcode version*" or later is required.	Update the microcode, and then try again.
KAIC08507-E	The virtual device set for the specified target volume (device number = "*Target volume device number*") does not match the source volume (device number = "*Source volume device number*").	Set a virtual device for the target volume, and then try again.
KAIC08508-E	Changing the settings of the external parity group has failed because a data migration using virtual IDs is not being performed for the specified external parity group ("*External parity group name*").	This is an informational message only. No additional action is required.
KAIC08509-E	This operation cannot be performed, because the same external volume (port = "*Port name*", external LUN = "*External LUN*", external WWN = "*External WWN*") was specified. You cannot create different parity groups from the same external volume.	Check and, if necessary, revise the specified external volume, and then try again.
KAIC08511-E	The virtualization emulation type set for the specified target volume (device number = "*Target volume device number*") does not match the emulation type ("*Emulation type of the source volume*") set for the source volume (device number = "*Source volume device number*"). Check and, if necessary, revise the virtual emulation type of the target volume, and then try again.	Check and, if necessary, revise the virtual emulation type of the target volume, and then try again.

Message ID	Message Text	Description
KAIC08512-E	The virtual SSID set for the specified target volume (device number = "*Target volume device number*") does not match the SSID ("*SSID of the source volume*") set for the source volume (device number = "*Source volume device number*"). Check and, if necessary, revise the virtual SSID for the target volume, and then try again.	Check and, if necessary, revise the virtual SSID for the target volume, and then try again.
KAIC08513-E	The number of virtual LUSE components set for the specified target volume (device number = "*Target volume device number*") does not match the number of LUSE components ("*Number of LUSE components*") set for the source volume (device number = "*Source volume device number*"). Check and, if necessary, revise the number of virtual LUSE components for the target volume, and then try again.	Check and, if necessary, revise the number of virtual LUSE components for the target volume, and then try again.
KAIC08514-E	The virtual CVS set for the specified target volume (device number = "*Target volume device number*") does not match the CVS of the source volume (device number = "*Source volume device number*"). Check and, if necessary, revise the virtual CVS of the target volume, and then try again.	Check and, if necessary, revise the virtual CVS of the target volume, and then try again.
KAIC08515-E	The operation cannot be performed on the specified parity group (*Display name of the parity group*) because it is not an external parity group. Respecify the external parity group, and then try again.	Respecify the external parity group, and then try again.
KAIC08521-E	The specified storage system (storage system name = "*Storage system name*") cannot be used for a data migration using virtual IDs.	This is an informational message only. No additional action is required.
KAIC08527-E	The emulation type (*emulation type*) of the specified migration-target volume is invalid. The emulation type of the migration-target volume must be OPEN-V.	The emulation type of the migration-target volume must be OPEN-V.

Message ID	Message Text	Description
KAIC08528-E	The specified migration-target volume (devnum = *devnum of migration-target volume*) is invalid because it is a mainframe volume. Revise the specified migration-target volume, and then try again.	This is an informational message only. No additional action is required.
KAIC08529-E	The specified migration-target volume (devnum = *devnum of migration-target volume*) is invalid because it is reserved as the S-VOL of a pair. Revise the specified migration-target volume, and then try again.	Revise the specified migration-target volume, and then try again.
KAIC08530-E	The specified migration-target volume (devnum = *devnum of migration-target volume*) is invalid because it is being used as a volume of a pair. Revise the specified volume, and then try again.	Revise the specified volume, and then try again.
KAIC08531-E	The specified config file is invalid. (pair management server = *pair-management-server-name*, instance number = *instance-number*)	If this problem persists, to determine the cause and resolve the problem, detailed investigation is required. 	required. Contact customer support, who may ask you to collect troubleshooting information.	
KAIC08537-E	An internal error occurred. The parameter "*parameter-name*" is invalid.	If this problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC08538-E	The specified pair volume is not the pair volume of the specified migration volume. Revise the migration volume and the pair volume of the migration volume, and then try again.	Revise the settings for the migration volume and the pair volume of the migration volume, and then try again. If this problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC08539-E	No pair volume of the specified migration volumes is managed by Device Manager. Revise the specified pair volume, and then try again.	Revise the specified pair volume, and then try again.
KAIC08540-E	No Device Manager agent was found in the pair management server "*pair-management-server-name*", which manages the config file.	Make sure that the Device Manager agent is installed.
KAIC08541-E	Migrations of the config file are not supported by the Device Manager agent installed on the pair management server "*pair-management-server-name*", which manages the config file.	Check the version of the Device Manager agent.
KAIC08542-E	No "*prerequisite product name*" was found in the pair management server "*pair management server name*", which manages the config file.	Make sure that the prerequisite products displayed in the message are installed.
KAIC08543-E	"*prerequisite product name*" installed on the pair management server "*pair management server name*", which manages the config file, does not meet the version requirements.	Check the versions of the prerequisite products displayed in the message.
KAIC08544-E	The config file is invalid.	If you want to migrate the config file, check the status of the config file on Manage Replication

Message ID	Message Text	Description
		window and correct the format of the config file. Next, refresh the information for the target storage system, and then try again.
KAIC08545-E	Information for the config file is incomplete.	Revise the version of the Device Manager agent, refresh the information for the target storage system, and then try again. If this problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC08546-E	HORCM_VCMD is defined.	If you want to migrate the config file, correct the format of the file. Next, refresh the information for the target storage system, and then try again.
KAIC08547-E	A command device that can be used after a migration is not connected to the pair management server.	Connect a command device that can be used after a migration to the pair management server that is managing the target config file. Next, refresh the information for the target storage system and the pair management server, and then try again.
KAIC08548-E	A virtual command device is defined.	If you want to migrate the config file, correct the format of the file. Next, refresh the information for the target storage system, and then try again.
KAIC08549-E	There is a copy pair that is defined in a format other than the HORCM_LDEV format.	If you want to migrate the config file, correct the format of the file. Next, refresh the information for the target storage system, and then try again.
KAIC08550-E	A copy pair is defined for a storage system which is not a source storage system.	Use separate config files for each storage system. Next, refresh the information for the target storage system, and then try again.
KAIC08551-E	There is no copy pair configuration that can be migrated for the pair volume defined in the config file.	If you want to migrate the config file, correct the format of the file. Next, refresh the information for the target storage system, and then try again.
KAIC08552-E	The virtual model set for the specified target volume (device number = *physical device number of the target volume*, virtual model = *virtual model of the*	Revise the settings for the target volume, and then try again.

Message ID	Message Text	Description
	target volume) does not match the model of the source volume (device number = *device number of the source volume*, model = *model name of the source volume*). Check and, if necessary, revise the virtual model of the target volume, and then try again.	
KAIC08553-E	The virtual serial number set for the specified target volume (device number = *physical device number of the target volume*, virtual serial number = *virtual serial number of the target volume*) does not match the serial number of the source volume (device number = *device number of the source volume*, serial number = *serial number of the source volume*). Check and, if necessary, revise the virtual serial number of the target volume, and then try again.	Revise the settings for the target volume, and then try again.
KAIC08554-E	The virtual device number set for the specified target volume (device number = *physical device number of the target volume*, virtual device number = *virtual serial number of the target volume*) does not match the device number of the source volume (device number = *device number of the source volume*). Check and, if necessary, revise the virtual device number of the target volume, and then try again.	Revise the settings for the target volume, and then try again.
KAIC08555-E	The virtualization emulation type set for the specified target volume (device number = *physical device number of the target volume*, virtual emulation type = *virtual emulation type of the target volume*) does not match the emulation type of the source volume (device number = *device number of the source volume*, emulation type = *emulation type of the source volume*). Check and, if necessary, revise the virtual emulation type of the target volume, and then try again.	Revise the settings for the target volume, and then try again.

Message ID	Message Text	Description
KAIC08556-E	The virtual CVS set for the specified target volume (device number = *physical device number of target volume*) does not match the CVS of the source volume (device number = *device number of target volume*). Check and, if necessary, revise the virtual CVS of the target volume, and then try again.	Revise the settings for the target volume, and then try again.
KAIC08557-E	The virtual SSID set for the specified target volume (device number = *physical device number of the target volume*, virtual SSID = *virtual SSID of the target volume*) does not match the SSID of the source volume (device number = *device number of the source volume*, SSID = *SSID of the source volume*). Check and, if necessary, revise the virtual SSID of the target volume, and then try again.	Revise the settings for the target volume, and then try again.
KAIC08558-E	The config file does not contain a copy pair definition.	If copy pair definitions are defined, revise the details of the config file, refresh the information for the target storage system, and then try again.
KAIC08559-E	Information for a pair volume is incomplete.	Refresh the information for the target storage system, and then try again. If this problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC08560-E	An unsupported copy pair is configured in the defined pair volume.	If you want to migrate the config file, revise the definitions of the config file or the configuration of the defined copy pair volume. Next, refresh the information for the target storage system, and then try again.
KAIC08561-E	A path cannot be set because the specified volume and host group (port ID = *port ID*, domain ID = *domain ID*) belong to different virtual storage machines.	Revise the settings for the volume and host group, and then try again.
KAIC08562-E	The host mode option (*host mode option*) cannot be canceled because a path for the specified host group (port ID = *port ID*,	Revise the settings for the host group, and then try again.

Message ID	Message Text	Description
	domain ID = *domain ID*) is defined for a volume that belongs to a different virtual storage machine.	
KAIC08563-E	The number of virtual LUSE components set for the specified target volume (device number = *physical-device-number of the target volume*, virtual number of LDEVs in the LUSE = *virtual-number of LDEVs in the LUSE*) does not match the number of LUSE components of the source volume (device number = *device-number of the target volume*, number of LDEVs in the LUSE = *number of LDEVs in the LUSE*). Check and, if necessary, revise the number of virtual LUSE components of the target volume, and then try again.	Revise the settings for the target volume, and then try again.
KAIC08564-E	The config file is invalid. Validation Code=*Validation Code*	Remove the cause of the error, and then try again. If this problem persists, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC08565-E	A copy group contains copy pairs that have different copy directions.	If you want to migrate the config file, revise the definitions of the config file or the configuration of the defined pair volume. Next, refresh the information for the target storage system, and then try again.
KAIC08566-E	A valid associated config file could not be found.	If you want to migrate this config file, revise the definitions of this config file and the config that can be associated with this config file. Next, refresh the information for the target storage system, and then try again.
KAIC08567-E	The associated config file (instance number *instance-number of the associated config file* on the pair management server *the name of the pair management server managing the associated config file.*) could not be migrated.	If you want to migrate this config file, revise the definitions of the config that can be associated with this config file. Next, refresh the information for the target storage system, and then try again.

Message ID	Message Text	Description
KAIC08568-E	Multiple copy pairs in a copy group are using the same P-VOL.	If you want to migrate the config file, revise the definitions of the config file. Then, refresh the target storage system information and try again.
KAIC08569-E	A copy group contains both L1 and L2 copy pairs.	If you want to migrate the config file, revise the definitions of the config file. Then, refresh the target storage system information and try again.
KAIC08570-E	The specified request contains multiple "*element-name*" elements for which the values of the "*parameter-name*" attributes do not match.	If you specify multiple "*element-name*" elements, make sure that all the values of the "*parameter-name*" attributes are the same.
KAIC08571-E	The migration-target volume (devnum = *devnum of migration-target volume*) is a command device, and therefore cannot be used.	Revise the specified migration-target volume, and then try again.
KAIC08572-E	The migration-target volume (devnum = *devnum of migration-target volume*) is a system disk, and therefore cannot be used.	Revise the specified migration-target volume, and then try again.
KAIC08573-E	The migration-target volume (devnum = *devnum of migration-target volume*) is a quorum disk, and therefore cannot be used.	Revise the specified migration-target volume, and then try again.
KAIC08574-E	The migration-target volume (devnum = *devnum of migration-target volume*) is a pool volume, and therefore cannot be used.	Revise the specified migration-target volume, and then try again.
KAIC08575-E	The migration-target volume (devnum = *devnum of migration-target volume*) is a reserved volume of *PP name*, and therefore cannot be used.	Revise the specified migration-target volume, and then try again.
KAIC08576-E	Guard mode is set for the migration-target volume (devnum = *devnum of migration-target volume*), and therefore the volume cannot be used.	Revise the specified migration-target volume, and then try again.
KAIC08577-E	The migration-target volume (devnum = *devnum of migration-target volume*) is being used as an external volume, and therefore cannot be used.	Revise the specified migration-target volume, and then try again.
KAIC08578-E	The migration-target volume (devnum = *devnum of migration-*	Revise the specified migration-target volume, and then try again.

Message ID	Message Text	Description
	target volume) is a system volume, and therefore cannot be used.	
KAIC08579-E	The migration-target volume (devnum = *devnum of migration-target volume*) cannot be used because it is being used as a pair volume of *PP name*.	Revise the specified migration-target volume, and then try again.
KAIC08580-E	This operation cannot be performed because a pair volume (device number = *device-number*) of the specified pair is a pair volume of *PP name*.	Check and, if necessary, revise the specified pair or delete the related pair, and then try again.
KAIC08581-E	You cannot use the same consistency group ID (*consistency-group-ID*) for pairs that belong to different virtual storage machines.	Check and, if necessary, revise the specified consistency group ID or the specified pair volumes, and then try again.
KAIC08582-E	This operation cannot be performed because the specified pair belongs to a consistency group.	Check and, if necessary, revise the specified pair or the specified options, and then try again.
KAIC08583-E	The primary and secondary storage system must be common to each pair that belongs to the consistency group.	Check and, if necessary, revise the specified pair or the specified options, and then try again.
KAIC08584-E	This request cannot be processed, because all pairs in the copy group belong to a consistency group. Check and, if necessary, revise the specified copy group, or the specified option, and then try again.	Check and, if necessary, revise the specified copy group or the specified option, and then try again.
KAIC08585-E	The pair operation succeeded, but collection of the pair information failed. Refresh the storage systems.	Refresh the storage systems.
KAIC08586-E	The Delta Resync operation cannot be performed because the *PP name (Universal Replicator)* pair uses a virtual ID.	Specify the physical ID, and then try again.
KAIC08587-E	The specified CTG ID is being used by *PP name*. Assign a different CTG ID, and then try again.	Assign a different CTG ID, and then try again.
KAIC08588-E	The *PP name* pair cannot be created because the specified quorum disk ID (*Quorum disk ID*) is not the same as a quorum disk ID set for a copy pair that belongs to the specified	Specify a quorum disk ID that is set for a copy pair that belongs to the specified consistency group.

Message ID	Message Text	Description
	consistency group (CTG ID = *CTG ID*). Check and, if necessary, revise the quorum disk ID.	
KAIC08589-E	No CTG ID can be assigned to the specified copy group because all CTG IDs are being used in the selected storage systems. Delete any unnecessary pairs to prepare a usable CTG ID, and then try again.	Delete any unnecessary pairs to prepare a usable CTG ID, and then try again.
KAIC08590-E	The specified consistency group might already have the maximum number of pairs, or executing this process might exceed the maximum number of pairs. Check and, if necessary, revise the specified consistency group ID, and then try again.	Check and, if necessary, revise the specified consistency group ID, and then try again.
KAIC08591-E	The specified request cannot be performed because a *PP name* pair that configures 3DC Delta Resync exists. Delete the *PP name* pair, and then try again.	Delete the *PP name* pair, and then try again.
KAIC08592-E	Auto-allocation of a CTG ID failed because pairs that belong to a different consistency group exist in the copy group. Specify the CTG ID manually, or specify another copy group.	Specify the CTG ID manually, or specify another copy group.
KAIC08593-E	The specified request cannot be performed because pairs that belong to a different consistency group exist in the copy group, or pairs that belong to a consistency group co-exist in the copy group with pairs that do not belong to a consistency group. Check and, if necessary, revise the specified pairs, and then try again.	Check and, if necessary, revise the specified pairs, and then try again.

	corresponding resource group is reserved by the storage system.	
KAIC08730-E	The task could not be performed on the host group (port ID = *port ID*, domain ID = *domain ID*) that belongs to the *port type* port because the corresponding resource group is reserved by the storage system.	Specify another host group, and then try again.
KAIC08731-E	The task could not be performed on the *reservation attribute* volume (device number = *device number*) because the corresponding resource group is reserved by the storage system.	Specify another volume, and then try again.
KAIC08732-E	The role of a port whose type is "*port-type*" cannot be modified.	Revise the port specification.
KAIC08733-E	Unable to reclaim zero pages on volume of the LU *device-number* because the volume belongs to a host group for which host mode option *host-mode* is set.	Check and, if necessary, revise the LU specification.
KAIC08734-E	No value is set for the *Attribute1* attribute. To manually specify a value for the *Attribute2* attribute, you must also specify a value for the *Attribute1* attribute. Specify a value for the *Attribute1* attribute, and then try again.	Specify a value for the *Attribute1* attribute, and then try again.
KAIC08751-E	An external volume for which the Data Direct Mapping attribute, or Pool Only attribute is enabled cannot be specified.	Specify another volume, and then try again.
KAIC08752-E	A *PP name (Dynamic Provisioning)* pool enabled for Data Direct Mapping cannot be specified.	Specify another pool, and then try again.
KAIC08754-E	A *PP name (Dynamic Provisioning)* volume enabled for Data Direct Mapping cannot be specified.	Specify another volume, and then try again.
KAIC08755-E	A *PP name (Dynamic Provisioning)* volume enabled for Data Direct Mapping cannot be specified as a pair volume between the specified storage systems.	Specify another volume, and then try again.
KAIC08761-E	This operation cannot be performed, because the specified volume (device number = *device-number*) is not a *P-VOL* of	Check and, if necessary, revise the specified volume, and then try the operation again.

Message ID	Message Text	Description
	TrueCopy and Universal Replicator. Check and, if necessary, revise the specified volume, and then try the operation again.	
KAIC08762-E	The specified option (*applyMonitorDataAndRelocate*) cannot specify more than one pool. Revise the specification, and then try again.	Revise the specification, and then try again.
KAIC08763-E	This operation cannot be performed, because the specified volume (device number = *device-number*) is not paired with the P-VOL from which the monitoring data was exported. Revise the volume specification, and then try again.	Revise the volume specification, and then try again.
KAIC08764-E	The operation cannot be performed because the specified volume is either not an open volume or a mainframe volume (device number = *device-number*).	Check and, if necessary, change the specified volume. Then, try the operation again.
KAIC08771-E	The microcode version of the specified storage system, "*storage-name*", is not supported for the creation of the virtual storage machine, "*family-name*".	Upgrade the microcode version, and then try again.
KAIC08772-E	The value of the attribute of the specified target port (*displayname of target port*) is neither 'Target' nor 'Bidirectional'. Change the port attribute, then try again.	Change the specified port attribute, then try again.
KAIC08773-E	The value of the attribute of the specified target port (*displayname of target port*) is neither 'External' nor 'Bidirectional'. Change the port attribute, then try again.	Change the specified port attribute, then try again.
KAIC08774-E	No parameters are specified for the "*element name*" element. Specify one of the following attributes: "*attribute name 1*", "*attribute name 2*", "*attribute name 3*", "*attribute name 4*" or "*attribute name 5*".	Change the specified port attribute, then try again.
KAIC08775-E	The specified volume cannot be formatted, because *dedupe and compression* is enabled. Format the volume by using *Hitachi*	Format the volume by using *Hitachi Device Manager - Storage Navigator*.

Message ID	Message Text	Description
	Device Manager - Storage Navigator.	
KAIC08776-E	The specified volume cannot be deleted, because *dedupe and compression* is enabled. Delete the volume by using *Hitachi Device Manager - Storage Navigator*.	Delete the volume by using *Hitachi Device Manager - Storage Navigator*.
KAIC08777-E	The specified pool cannot be deleted, because the deduplication function is enabled. Delete the pool by using *Hitachi Device Manager - Storage Navigator*.	Delete the pool by using *Hitachi Device Manager - Storage Navigator*.
KAIC08778-E	The specified volume is a deduplication system data volume, so it cannot be formatted. Format the volume by using *Hitachi Device Manager - Storage Navigator*.	Format the volume by using *Hitachi Device Manager - Storage Navigator*.
KAIC08800-E	An internal error occurred during initialization of performance data.	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC08801-E	Unable to initialize performance data. The config file "*Config file*" is not valid or cannot be accessed.	Take one or more of the following actions, as appropriate, and then retry the operation: • Make sure the config file exists. • Make sure you have access permissions for the config file. • Make sure the file contents are valid. If this problem persists, contact the Support Center, who may ask you to collect troubleshooting information.
KAIC08802-E	An unexpected error occurred during initialization of performance data.	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC08803-E	Unable to connect to Tuning Manager. (host name = "*host-name*", protocol = "*protocol*", port number = "*port-number*")	Complete one or more of the following checks, as appropriate, and then retry the task: • Make sure that Tuning Manager is running.

Message ID	Message Text	Description
		• Make sure that the time difference among Device Manager, Tuning Manager and Agent is less than 5 minutes. • Make sure the storage system was refreshed after the configuration was changed. • Make sure the host name specified at "`htnm.server.n.host`" can be correctly resolved. • Make sure the protocol specified at "`htnm.server.n.protocol`" is supported. • Make sure the port number specified at "`htnm.server.n.port`" is valid. • Make sure there is no problem with the port settings for operation in a firewall environment. • Make sure the Tuning Manager version supports the connection with Device Manager. See the Device Manager manual, and revise any settings required for displaying performance data. If this problem persists, contact the Support Center, who may ask you to collect troubleshooting information.
KAIC08804-E	The specified Tuning Manager IP address "*IP address*" is not in the correct format. Specify an IPv4 address.	Specify the IP address in IPv4 format.
KAIC08805-E	An unexpected error occurred during Tuning Manager connection. (host name = "*host-name*", protocol="*protocol* , port number = "*port-number*")	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC08807-E	Unable to connect to Tuning Manager. The Device Manager or the Tuning Manager does not support the functionality. (host name = "*host-name*")	See the Device Manager manual, and check the supported versions of Device Manager and Tuning Manager.

Message ID	Message Text	Description
KAIC08808-E	Unable to collect performance data. There is no Agent registered to Tuning Manager, or Device Manager does not support the Agent and the Agent data model. (host name = "*host-name*")	Take one or more of the following actions, as appropriate, then retry the operation: • Make sure that agent is registered to Tuning Manager. • See the Tuning Manager manual, and check the Agent versions and the Agent data models that are supported by Device Manager for collecting performance data.
KAIC08809-E	An unexpected error occurred during collection of performance data. (host name = "*host-name*",protocol="*protocol*", port number = "*port-number*")	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC08810-E	Unable to collect Performance data. The Device Manager database cannot be accessed.	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC08811-E	Tuning Manager is not monitoring the specified storage system, or no performance data has the specified duration "*specified duration*". (host name = "*host-name*", agent name = "*agent-name*")	Take one or more of the following actions, as appropriate, and then retry the operation: • Make sure that Tuning Manager can collect performance data from the storage subsystem being monitored. • From Tuning Manager, check the period during which performance data is to be collected.
KAIC08812-E	Unable to collect performance data. A connection from the Tuning Manager to the agent cannot be established. (host name = "*host-name*", agent name = "*agent-name*")	Take one or more of the following actions, as appropriate, and then retry the operation: • Revise the network settings or status between the Tuning Manager and the agent. • Revise the agent environment. If necessary, see the Tuning Manager manual. If the problem persists detailed investigation is required to determine the cause and resolve the problem. Contact the Support Center, who may ask you to collect troubleshooting information.

Message ID	Message Text	Description
KAIC08813-E	Tuning Manager memory is insufficient for performance data collection. (host name = "*host-name*")	Take one or more of the following actions, as appropriate, and then retry the operation: • Close unnecessary applications and windows and ensure there is enough memory. • Shorten the period during which performance data is collected. • Reduce the number of simultaneous collections of performance data. • Ensure that "blockTransferMode=true" is specified in the config file (`config.xml`). If necessary, see the Tuning Manager manual. If this problem continues, contact Support.
KAIC08814-E	Collection of performance data failed. Device Manager does not support Performance Advisor version *version*.	To collect performance data from Performance Advisor, use Performance Advisor version 5.0.0 or later.
KAIC08815-E	Collection of performance data failed. An attempt to connect to the Performance Advisor server failed.	Check the connection between Performance Advisor CLUI and the Performance Advisor server.
KAIC08816-E	Collection of performance data failed. Performance Advisor CLUI commands cannot be executed.	Confirm the following: - Performance Advisor CLUI is properly installed. - The Performance Advisor CLUI installation path specified for `hppa.CLIClientPath` of the `hppa.properties` property is correct.
KAIC08817-E	Collection of performance data failed. An error occurred in Performance Advisor. The Performance Advisor server might not be running properly.	Confirm the following: • Performance Advisor CLUI is running properly. • Commands can be properly executed from Performance Advisor CLUI. To resolve the problem, see the Performance Advisor manual. If this problem continues, detailed investigation is required to determine the cause and resolve the problem. Contact the Support Center, who may ask you

KAIC09026-E	The instance does not exist. Object path:"*Object path*"	Check the object path, and then re-execute.
KAIC09027-E	In the "*requested-operation-name*" operation, An attempt to retrieve data for the storage system has failed.	Follow the last related message. If there is no related message, contact the Support Center.
KAIC09028-E	"*DeviceManager_error_code*","*Storage_API_error_code*","*Storage_API_error_code*","*Storage_API_detail_information*"	Call server administrator.
KAIC09029-E	"*DeviceManager_error_code*","*Storage_API_error_code*","*Storage_API_error_code*","*Storage_API_detail_information*"	Call server administrator.
KAIC09100-E	CIM-WBEM Service initialization error: an invalid HTTP port number "*port-number*" has been specified.	Confirm the value of "`server.properties`" and restart the services.
KAIC09101-E	CIM-WBEM Service initialization error: an invalid HTTPS port number "*port-number*" has been specified.	Confirm the value of "`server.properties`" and restart the services.
KAIC09114-E	An attempt to start the CIM-WBEM Service on port "*port-number*" failed.	Stop any service that uses a port having a port number used by the CIM-WBEM Service, and restart the Device Manager Server.
KAIC09501-E	An error occurred within SLP API processing. SLP error number: "*SLP-error-number*", error details: "*error-detail*"	Check if the SLP daemon is running. If it is not running, then start it and restart the Device Manager Server. If this error occurs even the SLP daemon is already running, then contact the Support Center.

KAIC10000 - KAIC19999

The following table describes messages KAIC10000 to KAIC19999, which are related to Device Manager GUI. Unless stated otherwise, *server* refers to the Hitachi Command Suite management server. For messages with the sentence "Call server administrator." in the message text or in the description, contact the Hitachi Command Suite storage administrator.

Table 2-10 KAIC10000 - KAIC19999 (messages related to Device Manager GUI)

Message ID	Message Text	Description
KAIC10001-W	Currently, there are commands being processed for subsystem *subsystem-name*.	Please retry this action after the active commands are completed.
KAIC10002-W	Cannot Move Storage to a LogicalGroup which has different subsystem.	Please move storage to a Logical Group which contains storage in same storage subsystem.
KAIC10003-W	Currently, there are commands being processed for subsystem *subsystem-name*.	Please retry this action after the active commands are completed.
KAIC10004-W	There are processing tasks still running on logical group "*logical-group-name*".	Please retry this action after the active commands are completed.
KAIC10005-W	There are processing tasks still running on storage subsystem "*subsystem-name*".	Please retry this action after the active commands are completed.
KAIC10006-W	Currently, there are commands being processed for subsystem *subsystem-name*.	Please retry this action after the active commands are completed.
KAIC10010-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to add the storage has failed. Please retry this action after the previous action is completed.
KAIC10011-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to modify the host has failed. Please retry this action after the previous action is completed.
KAIC10012-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to delete the host has failed. Please retry this action after the previous action is completed.
KAIC10013-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to move same LUN has failed. Please retry this action after the previous action is completed.
KAIC10015-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to delete the LUN security has failed. Please retry this action after the previous action is completed.
KAIC10016-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to remove the Port has failed. Please retry this action after the previous action is completed.

Message ID	Message Text	Description
KAIC10017-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to delete the group has failed. Please retry this action after the previous action is completed.
KAIC10018-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to delete the storage has failed. Please retry this action after the previous action is completed.
KAIC10019-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to delete the storage array has failed. Please retry this action after the previous action is completed.
KAIC10024-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to scan LUN has failed. Please retry this action after the previous action is completed.
KAIC10025-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to delete the storage from multi groups has failed. Please retry this action after the previous action is completed.
KAIC10026-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to add the Logical Unit has failed. Please retry this action after the previous action is completed.
KAIC10027-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to delete the Logical Unit has failed. Please retry this action after the previous action is completed.
KAIC10028-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to add the array group has failed. Please retry this action after the previous action is completed.
KAIC10029-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to define spares has failed. Please retry this action after the previous action is completed.
KAIC10030-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to delete the array group has failed. Please retry this action after the previous action is completed.
KAIC10031-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to modify the port controller has failed. Please retry this action after the previous action is completed.

Message ID	Message Text	Description
KAIC10032-W	Subsystem is busy. Please retry this action after the previous action is completed.	An attempt to add HostStorageDomain has failed. Please retry this action after the previous action is completed.
KAIC10033-E	The server is returning a Message ID that is used by a previous command.	If this error persists, please contact the Support Center.
KAIC10034-W	Delete alerts is in process. Please retry this action after the previous action is completed.	Please retry this action after the active action is completed.
KAIC10035-E	Device Manager Web Client was unable to communicate with the Device Manager Server.	Check the network status and whether the Device Manager server is running correctly. If a network problem exists, remove its cause. If the Device Manager server has stopped, start it. If you cannot start the server, contact the Support Center. Even if the Device Manager server is running correctly, this message might be output if the Device Manager server takes an unusually long time to start because of its status when it last stopped. In this case, wait a while and then retry starting the server.
KAIC10036-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10037-E	A problem was encountered trying to download and install the server certificate. Device Manager Web Client is unable to access the Device Manager Server through the secure channel. Please contact your system administrator for assistance.	Please ask the system administrator if the Keystore file is located in correct location on the server machine.
KAIC10038-E	A file required for a secure socket connection cannot be downloaded. Click OK to exit the system.	Please check the network configuration.
KAIC10039-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10040-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10041-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10042-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.

Message ID	Message Text	Description
KAIC10043-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10044-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10045-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10046-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10047-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10048-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10049-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10050-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10051-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10052-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10053-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10054-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10055-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10056-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10057-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10058-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10059-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10060-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10061-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10062-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10063-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.

Message ID	Message Text	Description
KAIC10064-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10065-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10066-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10067-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10068-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10069-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10070-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10071-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10072-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10073-E	A user is not permitted to log in as Peer.	Please log in not as Peer.
KAIC10074-E	Since the version of JRE is old,Web Client cannot be started. The version of JRE which is operating now is *JRE-version*.	Confirm that you are using a JRE version that is supported for use with Web Client.
KAIC10075-E	The Logical Group that you have selected no longer exists.	Please open another window, then come back to the original window. If this error persists, please contact the Support Center.
KAIC10078-E	Cannot parse "*value*" into a floating point number.	If this error persists, please contact the Support Center.
KAIC10079-W	No LU is selected.	Please continue process after selecting the storage.
KAIC10080-E	Invalid URL	Please check the network configuration. If you want to launch Storage Navigator or Dynamic Link Manager, please check if the selected application is working properly.
KAIC10081-W	Device Manager cannot modify the logical group because no logical group has been selected.	Please continue operation after a logical group is selected.
KAIC10082-W	A logical group cannot be deleted if it or a child group has already been allocated to a resource group. The resource group must be deleted first.	Please retry operation after deleting the resource group.

Message ID	Message Text	Description
KAIC10083-W	Device Manager cannot delete the logical group because no logical group has been selected.	Please continue operation after a logical group is selected.
KAIC10084-W	Storage cannot be moved to a logical group assigned to the resource group *resource-group-name*.	Please move the storage to a logical group that is not assigned to the resource group.
KAIC10085-W	Device Manager cannot proceed to the next step because no logical group is selected.	Please continue operation after a logical group is selected.
KAIC10086-E	There was an error adding a new host.	Please contact the Support Center.
KAIC10087-W	Currently, there are commands being processed for subsystem *name*.	Please continue operation after the active process is finished.
KAIC10088-W	Currently, there are commands being processed for subsystem *name*.	Please continue operation after the active process is finished.
KAIC10089-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10091-W	All of the disks in an array group must be in the same row and chassis.	Please select disks which are located in the same row and chassis.
KAIC10092-W	You must select at least two (2) disks to create an array group.	Please select at least two disks.
KAIC10093-W	All of the disks in an array group must be next to one another.	Please select disks located next to each other (contiguous).
KAIC10094-W	You cannot delete the user who is currently logged on.	To delete the specified user, first log on as another system administrator or local system administrator.
KAIC10095-W	You have asked to permanently delete the last *resource-group-name* user. There must always be at least one user of this type for Device Manager to work.	Please delete the specified user after creating one or more users.
KAIC10096-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10097-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10098-E	Inconsistent properties found in the logical group "*name*".	Please contact the Support Center.
KAIC10099-W	No storage is selected.	Please retry operation after the storage is selected.
KAIC10100-W	The Storage Array is not selected!	Please retry operation after the storage subsystem is selected.

Message ID	Message Text	Description
KAIC10101-W	This resource group name already exists. Select a different name.	Please select a resource group name which is not duplicated.
KAIC10102-W	Duplicate User Name.	Please select a user name which is not duplicated.
KAIC10103-W	Your user ID or password is invalid, please check with the Administrator.	Please confirm your user ID and password with the Administrator.
KAIC10104-E	Device Manager Web Client has lost the network connection to the Device Manager Server. This might be due to a network problem or the server may be down. Device Manager Web Client will now exit. Please check your network connection and try again later.	Please check if Device Manager is running properly. Please also check network condition. Also confirm that the number of LDEVs specified for a single operation does not exceed the maximum specifiable number. This maximum number is approximately 200 if each LDEV has one volume path, or 100 if each LDEV has two volume paths.
KAIC10105-E	Device Manager has lost the network connection to the Device Manager Agent. This might be due to a network problem or the agent may be down.	Please check if Device Manager Agent is running properly. Please also check network condition.
KAIC10106-E	The Device Manager Server Certificate has expired. Device Manager Web Client will now exit. Please contact your system administrator for assistance.	Please contact the system administrator.
KAIC10108-E	The requested service is not currently implemented on the Device Manager Server.	Please go to the **Help , Index** in menu bar to check if the versions of server and web client match.
KAIC10109-E	An unexpected error occurred in the Device Manager Web Client.	Please contact the Support Center.
KAIC10110-E	An unexpected error occurred in the Device Manager Server.	Please contact the Support Center.
KAIC10111-E	Device Manager Server received bad request.	Please contact the Support Center.
KAIC10112-E	Device Manager Server received too large request.	Please contact System administrator to resize the maximum size of acceptable request for Device Manager Server.
KAIC10113-E	Device Manager Server is shutting down now.	Please contact System administrator.
KAIC10114-E	Device Manager Server cannot find files to be downloaded.	Please contact the Support Center.
KAIC10123-E	Missing host in message response.	Please contact the Support Center.

Message ID	Message Text	Description
KAIC10124-E	Missing HostInfo in message response.	Please contact the Support Center.
KAIC10125-E	Parent Group "*logical-group-name*" was deleted in a previous command.	Please select another logical group for the parent group.
KAIC10126-E	The new parent group already contains storage.	Please select another logical group for the parent group.
KAIC10127-E	Group Name is duplicated!	Please select another group name.
KAIC10128-E	The Group Name "*logical-group-name*" is reserved!	Please select another group name.
KAIC10129-E	The parent group is busy.	Please retry this action after the active action is completed.
KAIC10130-E	Login process to Device Manager Server is failed. Web Client is shutting down now since there is a possibility of having network problem. Please login after checking network connectivity.	Please check if Device Manager is running properly. Please also check network condition.
KAIC10131-E	Failed to receive messages from Device Manager Server. Web Client is shutting down now since there is a possibility of having network problem. Please check your network connection and try again later.	Please check if Device Manager is running properly. Please also check network condition.
KAIC10132-E	Failed to receive messages from Device Manager Server. Web Client is shutting down now since there is a possibility of having network problem. Please check your network connection and try again later.	Please check if Device Manager is running properly. Please also check network condition.
KAIC10133-E	Failed to receive command result from Device Manager Server. Web Client is shutting down now since there is a possibility of having network problem. Please check your network connection and try again later.	Please check if Device Manager is running properly. Please also check network condition.
KAIC10134-W	The password you entered was not correct. You will not be permitted to continue this operation.	Please check password.
KAIC10135-W	More than *number* of disks cannot be defined as spare disks of this subsystem.	Please select fewer spare disks than specified.
KAIC10136-W	The subsystem is busy.	Wait until the processing finishes, and then retry the operation.

Message ID	Message Text	Description
KAIC10137-W	The subsystem is busy.	Wait until the processing finishes, and then retry the operation.
KAIC10139-E	Device Manager Server internal error has occurred.	Please contact the Support Center.
KAIC10140-E	*program-name* cannot be started up.	Please contact System administrator.
KAIC10141-W	Subsystem is busy. Please retry this action after the previous action is completed.	Please continue operation after the active process is finished.
KAIC10142-W	Subsystem is busy. Please retry this action after the previous action is completed.	Please continue operation after the active process is finished.
KAIC10143-W	One or no WWNs exist in the WWN group *WWN-group-name*. Make sure that two or more WWNs exist in the WWN group.	Add two or more WWNs to the WWN group.
KAIC10144-W	No LUNs exist in the LUN Group *LUN-group-name*. Make sure that more than one LUN exists in the LUN Group.	Add one or more LUNs to the LUN group.
KAIC10145-W	A WWN group of the same name already exists in either the dropdown list or storage subsystem.	Change the name of the WWN group to one which does not exist.
KAIC10146-W	An LUN group of the same name already exists in either the dropdown list or storage subsystem.	Change the name of the LUN group to one which does not exist.
KAIC10147-W	The subsystem is busy. Try this action again once the previous action has completed.	Please continue operation after the active process is finished.
KAIC10148-E	The specified WWN is being used with a different LUN/LUN Group, and cannot be registered.	Change the security of the LUN of the corresponding WWN, or de-allocate the WWN.
KAIC10149-W	WWN group names must be less than eight characters, and more than one character.	Change the name.
KAIC10150-W	LUN group names must be less than eight characters, and more than one character.	Change the name.
KAIC10151-W	Only the following characters can be used in group names: ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklmnopqrstuvwxyz 0123456789	Change the name.

Message ID	Message Text	Description
	_-+=.@!#$%&'^~`[](){}	
KAIC10152-W	Only the following characters can be used in group names: ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklmnopqrstuvwxyz 0123456789 _-+=.@!#$%&'^~`[](){}	Change the name.
KAIC10153-E	Device Manager Web Client internal error has occurred.	Please contact the Support Center.
KAIC10154-E	The LDEV "*DevNum*" can not be used as a command device. The capacity of the LDEV is not sufficient.	Check the capacity of the LDEV/LU and choose another.
KAIC10155-E	Subsystem is busy. Please retry this action after the previous action is completed.	Please continue operation after the active process is finished.
KAIC10156-E	Subsystem is busy. Please retry this action after the previous action is completed.	Please continue operation after the active process is finished.
KAIC10157-E	Subsystem is busy. Please retry this action after the previous action is completed.	Please continue operation after the active process is finished.
KAIC10158-W	A duplicate nickname is specified.	Specify a unique nickname, and try again.
KAIC10159-W	The specified nickname "*nickname*" is not available. This nickname is already used by another HostStorageDomain on the same port.	Change the name of the HostStorageDomain to one which does not exist.
KAIC10160-W	The specified nickname "*nickname*" is not available. This nickname is already used by another WWN/HostStorageDomain on the same port.	Change the name of the WWN/HostStorageDomain to one which does not exist.
KAIC10161-W	The WWN Group could not be registered, because LUN security is disabled. Please enable LUN security.	Enable LUN security for this port.
KAIC10162-W	The LUN Group could not be registered, because LUN security is disabled. Please enable LUN security.	Enable LUN security for this port.
KAIC10163-W	The cascading copy pairs by ShadowImage / BusinessCopy exist in the group *group-name*	Select another group, or create a new group.

Message ID	Message Text	Description
	(Host: *host-name* HORCM: *instance-number*). Cascading copy pairs cannot be specified in the same group. Please select different groups.	
KAIC10164-W	The specified copy pair name *copy-pair-name* already exists in Host: *host-name* HORCM: *instance-number*. Please enter a different copy pair name.	Specify another copy pair name.
KAIC10165-W	The specified copy pair name *copy-pair-name* is duplicated in Host: *host-name* HORCM: *instance-number*. Please enter a different copy pair name.	Specify another copy pair name.
KAIC10166-W	The group *group-name* (Host: *host-name* HORCM: *instance-number*) cannot register this combination of copy pairs, since the subsystem type that the copy pairs are using is different.	Select another group, or create a new group.
KAIC10167-W	The group *group-name* (Host: *host-name* HORCM: *instance-number*) cannot register this combination of copy pairs, since the fence level that the copy pairs are using is different.	Select another group, or create a new group.
KAIC10168-W	The group *group-name* (Host: *host-name* HORCM: *instance-number*) cannot register this combination of copy pairs, since the different combination of P-VOL and S-VOL subsystem are existed in this group.	Only one combination of P-VOL and S-VOL storage subsystem copy pair can be specified in one group. Select another group, or create a new group.
KAIC10170-E	Select the storage to be deleted.	Select the storage to be deleted.
KAIC10171-E	Select the storage to be moved.	Select the storage to be moved.
KAIC10172-E	Select the storage for which you want to modify security.	Select the storage for which you want to modify the security.
KAIC10173-E	Select multiple storage for which you want to create a LUSE.	Select multiple storage to create a LUSE.
KAIC10174-E	Select the storage for which you want to delete a LUSE.	Select the storage for which the LUSE will be deleted.
KAIC10175-E	Select the storage to be allocated.	Select the storage to be allocated.
KAIC10176-E	Select the storage to be unallocated.	Select the storage to be unallocated.
KAIC10177-E	Select the storage for which you want to create a copy pair.	Select the storage for which a copy pair will be created.

Message ID	Message Text	Description
KAIC10178-E	Select storage belonging to a single subsystem.	Select storage belonging to a single storage subsystem.
KAIC10179-E	The group name is not specified.	Enter a group name.
KAIC10180-E	The group name "*group-name*" is a reserved name.	Enter another group name.
KAIC10181-E	The host name is not specified.	Enter a host name.
KAIC10182-E	The specified World Wide Name is invalid.	Enter a valid World Wide Name.
KAIC10183-E	The World Wide Name must be unique.	Enter another World Wide Name.
KAIC10184-E	The IP address or host name is not specified.	Enter an IP address or host name.
KAIC10185-E	The user ID is not specified.	Enter a user ID.
KAIC10186-E	The SNMP community is not specified.	Enter a SNMP community.
KAIC10187-E	The password is invalid.	Re-enter a password.
KAIC10188-E	The format of the LDEV entry is invalid.	Enter the LDEV in the correct format.
KAIC10189-E	The format of the total capacity entry is invalid. Enter an integer value.	Revise and re-enter the total capacity. You can enter a value up to a maximum of 2 to the power of 31 minus 1.
KAIC10190-E	The number of storages is invalid. Enter an integer value.	Enter the number of storages.
KAIC10191-E	The find options are invalid.	Enter a valid find option.
KAIC10192-E	Enter LDEVs.	Enter the LDEVs.
KAIC10193-E	Enter the total capacity.	Enter the total capacity.
KAIC10194-E	Enter the number of storages.	Enter the number of storages.
KAIC10195-E	A device cannot be found with the selected LDEV number *LDEV-number*.	Specify another LDEV number.
KAIC10196-E	There are no or not enough LDEVs matching the search criteria.	Specify another find option.
KAIC10197-E	Select more than one PORT.	Select more than one PORT.
KAIC10198-E	Select more than one PORT-HOST:WWN/iSCSI Name.	Select more than one Port-Host:WWN/iSCSI Name.
KAIC10199-E	Select more than one LU.	Select more than one LU.
KAIC10201-E	Select more than one LU-PORT-HOST:WWN/iSCSI Name connection.	Select more than one LU-Port-Host:WWN/iSCSI Name connection.

Message ID	Message Text	Description
KAIC10204-E	An LDEV with a path specified cannot be specified for a LUSE.	Select unallocated LDEVs.
KAIC10206-E	If CVS LDEVs are in a LUSE, all LDEVs must be CVS.	Make all the LDEVs either CVS LDEVs or non-CVS LDEVs.
KAIC10207-E	All LDEVs in a LUSE must have the same CU.	Select LDEVs from the same CU.
KAIC10208-E	All LDEVs in a LUSE must have the same emulation type.	Select LDEVs having the same emulation type.
KAIC10209-E	All LDEVs in a LUSE must have the same RAID level.	Select LDEVs having the same RAID level.
KAIC10210-E	All CVS LDEVs in a LUSE must have the same size.	Select LDEVs having the same size.
KAIC10211-E	The sum total of the LU size must be less than 2 TB.	Make the sum total of the LU size less than 2 TB.
KAIC10212-E	The RAID0 LDEV cannot be specified in a LUSE.	Select LDEVs except RAID0 level LDEVs.
KAIC10213-E	All LUs must belong to the same default port controller in a LUSE.	Select LDEVs having the same port controller.
KAIC10214-E	Only a maximum of 36 LDEVs may be configured in a LUSE.	Select no more than 36 LDEVs.
KAIC10215-E	Storage cannot be added to the selected logical group.	Select another logical group.
KAIC10216-E	No subsystems are registered.	Add a storage subsystem.
KAIC10218-E	A WWN already assigned to the port is selected. Check the available HOST:WWN and PORT combinations.	Check the available combinations of HOST:WWN and PORT.
KAIC10219-E	Storage which is not a LUSE volume is selected.	Select a LUSE volume.
KAIC10220-E	Enter your user ID.	Enter your user ID.
KAIC10221-E	Enter your password.	Enter your password.

KAIC10227-E	The emergency license has expired. Enter a product license key or a product license key file.	Purchase a license.
KAIC10228-E	Enter your license key.	Enter your license key.
KAIC10229-E	An attempt to get the license information has failed.	Please contact the Support Center.
KAIC10231-E	This license key is invalid or has already been registered.	Enter a valid license key.
KAIC10232-E	An attempt to log into Device Manager has failed. Enter the user ID and password.	Log in again.
KAIC10236-E	The host has no copy pair information.	Select a host that has one or more copy pairs.
KAIC10237-W	If this operation is performed during I/O processing on the primary volume, the data of the secondary volume may be corrupted. Make sure that no I/O processing is being performed on the primary volume before you proceed. Are you sure you want to continue?	Confirm that hosts are not issuing I/Os on any primary volume (P-VOL), and then continue the operation.
KAIC10238-W	An un-recommended value is specified for the copy pace. Make sure the value is correct. Are you sure you want to continue?	For AMS/WMS, Thunder 9500V or Thunder 9200, set the copy pace for ShadowImage, TrueCopy and QuickShadow / COW Snapshot to Faster 15.
KAIC10239-W	The data in the volume specified to be the secondary volume will be lost as a result of this operation. Please confirm.	Continuing this operation will delete the data of a volume specified to be a secondary volume. Back up the data if necessary, and then continue the operation.
KAIC10240-E	World Wide Name or iSCSI Name is not specified.	Enter a World Wide Name or iSCSI Name.
KAIC10241-E	The name of the storage subsystem is not specified.	Enter the name of the storage subsystem.
KAIC10242-E	Select more than one WWN or iSCSI Name or WWN group.	Select a WWN or iSCSI Name or a WWN group.
KAIC10243-E	The specified parent logical group is invalid.	For a parent logical group, do not specify a logical group that will be updated or a child logical group of a logical group that will be updated.
KAIC10244-E	The host name must be unique.	Enter another host name.
KAIC10245-E	World Wide Name(s) or iSCSI Name(s) *World-Wide-Name/iSCSI*	Enter another World Wide Name or iSCSI Name.

Message ID	Message Text	Description
	Name is/are already in use by host(s) *host-name*.	
KAIC10246-E	*host-name* HORCM *instance-number* cannot be specified, since it is not set to be managed.	Enter another instance number.
KAIC10247-E	The port number does not match the one already specified for *host-name* HORCM *instance-number*. The combination of the HORCM instance and the HORCM port number cannot be changed.	Select another combination, or create a new combination.
KAIC10248-E	This group name already exists in the host *host-name* HORCM *instance-number*.	Enter another group name.
KAIC10249-E	The port number *port-number* is already used in the host *host-name*.	Enter another port number.
KAIC10250-E	The same HORCM cannot be specified for both P-VOL and S-VOL.	Enter another HORCM.
KAIC10251-E	The same HORCM port cannot be specified for both P-VOL and S-VOL.	Enter another HORCM port.
KAIC10252-E	The LU *DevNum* cannot be deleted, because it is set as a command device.	Cancel the setup of the command device.
KAIC10253-E	The LU *DevNum* cannot be deleted, because it is set as a copy pair.	Delete a copy pair.
KAIC10254-E	The LU *DevNum* cannot be deleted from Device Manager.	Delete from the application attached to the storage subsystem.
KAIC10255-E	The LU *DevNum* cannot have a logical group moved.	When an expanded LU is made by Disk Array Management Program 2 with multiple LUs that have been allocated for an LUN, or when LUNs are assigned to LUs except for a MainLU after making the LU expansion, the LUNs except for the LUNs allocated to the MainLU are also displayed by Device Manager. In this case Device Manager cannot operate this type of LU.
KAIC10256-E	The storage of another storage subsystem is assigned to the group *group-name*.	Select another logical group.

Message ID	Message Text	Description
KAIC10257-E	You cannot assign the same security for all the LDEVs that you selected.	Secure the security individually.
KAIC10258-E	The LU *DevNum* cannot be secured with Device Manager.	Secure the LUN from the application attached to the storage subsystem.
KAIC10260-E	A request cannot be received. Close the dialog box, and retry the operation. If the problem re-occurs, log in again and retry the operation.	Close the dialog and try the operation again.
KAIC10263-E	Use numeric characters for the HORCM instance number.	Enter a valid instance number.
KAIC10264-E	Use numeric characters for the port number	Enter a valid port number.
KAIC10265-E	Only alphanumeric characters and symbols can be used in copy pair names and copy group names. Also, '-' cannot be used at the beginning of a name.	Enter a valid pair name.
KAIC10266-W	Because LUNs are already assigned to the following combinations of LDEVs and Ports, this operation does NOT assign LUNs to them and does NOT register them to the storage group. Are you sure you want to continue?	Enter a valid character string.
KAIC10267-E	The selected WWN Group is not registered in the selected port. Check the available combinations of HOST:WWN and PORT.	Check the available combinations of HOST:WWN and PORT, and use an available combination.
KAIC10268-E	The selected LU is already allocated to the selected port. Check the available combinations of LU and Port-Host WWN.	Check the available combinations of LU and Port-Host WWN, and use an available combination.
KAIC10269-E	The selected LU is already allocated to the selected Port/ HSD(iSCSI Target). Check the available combinations of LU and Port-Host WWN/iSCSI Name.	Check the available combinations of LU and Port-Host WWN/iSCSI, and use an available combination.
KAIC10270-W	As a result of this operation, data on these volumes will be lost. Are you sure you want to continue?	Check the contents of the warning and check whether there is an error in the operation.
KAIC10271-W	Confirm that no host and External port is performing I/O processing on any of the LUNs with the PORTs. If I/O processing is being performed, the processing might	Check the contents of the warning and check whether there is an error in the operation.

Message ID	Message Text	Description
	terminate abnormally. Are you sure you want to continue?	
KAIC10272-W	Confirm that no host and External port is performing I/O processing on any of the LUNs with the HSD/ iSCSI Target. If I/O processing is being performed, the processing might terminate abnormally. Are you sure you want to continue?	Check the contents of the warning and check whether there is an error in the operation.
KAIC10273-W	Confirm that no host and External port is performing I/O processing on any of the LUNs. If I/O processing is being performed, the processing might terminate abnormally. Are you sure you want to continue?	Check the contents of the warning and check whether there is an error in the operation.
KAIC10274-W	This operation will change the port's LUN security, which may prevent other hosts and External ports from accessing LUNs with the following ports. Are you sure you want to continue?	Check the contents of the warning and check whether there is an error in the operation.
KAIC10275-W	Deleting copy pair volumes or command devices may disable later modification of the copy pair volume settings. Are you sure you want to continue?	Check the contents of the warning and check whether there is an error in the operation.
KAIC10276-E	The host *host-name* is not a host that can operate copy pairs.	Check the following items: 1. The version of the RAID Manager installed on the host. 2. The version of the host agent installed on the host. 3. A command device is accessible by the host.
KAIC10277-E	A selected LDEV does not satisfy requirements for the copy pair. Possible reasons for this error are as follows: 1. A requirement for making a copy pair was not satisfied. 2. An LDEV that meets the requirements for making a copy pair has not been selected. See "*Requirements for copy pairs*", and make sure that the copy pair satisfies the necessary requirements for making a copy pair.	Select an LDEV that meets the requirements and execute the process again.
KAIC10278-E	Specify a group name.	Enter valid characters.

Message ID	Message Text	Description
KAIC10279-E	Specify the *P-VOL or S-VOL Item Name*.	Use numeric characters.
KAIC10281-E	*Name* can only contain numeric characters.	Use numeric characters.
KAIC10282-E	Specify the *name* using a number between *number* and *number*.	Enter another number.
KAIC10284-E	A device already allocated to all ports is included.	Select a device that can be allocated.
KAIC10285-E	A WWN group and WWN registered to a WWN group cannot be selected.	Select a WWN that is not registered to the selected WWN group.
KAIC10286-E	The selected WWN is registered to the WWN group in the selected port. Check the available combinations of HOST:WWN and PORT.	Check the available combinations of HOST:WWN and PORT, and use an available combination.
KAIC10287-W	The LDEV cannot be specified because an invalid LDEV is selected or multiple LDEVs are selected. The initial window of Dynamic Link Manager is displayed.	Re-select the LDEV, or select an LDEV in Dynamic Link Manager.
KAIC10288-E	Add a subsystem.	Add a storage subsystem before displaying the report window.
KAIC10289-E	Check the contents of the warning.	Check the contents of the warning, and then select the check box.
KAIC10290-E	A resource group is registered in the specified logical group.	Create a new logical group, and then add a path in the logical group.
KAIC10291-E	The operation cannot be continued because no host is registered.	Register a host.
KAIC10292-E	An attempt to perform authentication has failed.	Contact the system administrator.
KAIC10293-E	An attempt to start has failed.	Confirm that you are using a JRE version that is supported for use with Web Client. If the error occurs again, contact the system administrator.
KAIC10294-E	No path is selected.	Select a path.
KAIC10295-E	An LDEV in pool cannot be used for storage allocation.	Select a device that can be allocated.
KAIC10296-E	The LDEV device specified by the LDEV number *LDEV-number* is part of a pool.	Specify the LDEV number of an allocatable device.

Message ID	Message Text	Description
KAIC10298-E	A communication error has occurred. Open the Tasks menu, and confirm that the operation has finished.	Open the Tasks menu to check if the operation has finished. If this error occurs frequently, contact the system administrator.
KAIC10299-E	An illegal transition was done by user operation.	Retry the operation.

KAIC16155-W	The specified Subscription Limit value is less than the current Subscription value. Specify a Subscription Limit larger than the current Subscription Value.	*Cause* - *Action* Specify a Subscription Limit larger than the current Subscription Value.
KAIC16156-E	The Used Threshold 1 value (*used-threshold-1*%) must be smaller than Used Threshold 2 (*used-threshold-2*%). Specify an Used Threshold 1 smaller than the Used Threshold 2 value.	*Cause* - *Action* Specify an Used Threshold 1 smaller than the Used Threshold 2 value.
KAIC16157-E	The subscription warning value (*subscription-warning*%) must be smaller than subscription limit (*subscription-limit*%). Specify a subscription warning smaller than the subscription limit value.	*Cause* - *Action* Specify a subscription warning smaller than the subscription limit value.
KAIC16158-E	Specify a pool name that is *min-length-max-length* characters long.	*Cause* - *Action* -

Message ID	Message Text	Description
KAIC16159-E	The input pool name is not valid. Valid characters are A-Z, a-z, 0-9, the space character, and the following characters: ~ ` ! @ # $ % ^ & ( ) _ + - = { } [ ] ' .. Use only valid characters for the pool name.	*Cause* - *Action* Use only valid characters for the pool name.
KAIC16160-E	The input label is not valid. Valid characters are A-Z, a-z, 0-9, the space character, and the following characters: ~ ` ! @ # $ % ^ & * ( ) _ + - = { } [ ] | : ; ' < > , . ? /. Use only valid characters in the label.	*Cause* - *Action* Use only valid characters in the label.
KAIC16161-W	Used % exceeds Used Threshold 1 Add more storage to the pool.	*Cause* - *Action* Add more storage to the pool.
KAIC16162-W	Used % exceeds Used Threshold 2 Add more storage to the pool.	*Cause* - *Action* Add more storage to the pool.
KAIC16163-W	Subscription exceeds the subscription warning value. Add more storage to the pool.	*Cause* - *Action* Add more storage to the pool.
KAIC16164-W	Subscription exceeds the subscription limit value. Add more storage to the pool.	*Cause* - *Action* Add more storage to the pool.
KAIC16165-E	A condition or resource is not specified. Specify one or more conditions or resources.	*Cause* - *Action* Specify one or more conditions or resources.
KAIC16166-E	The specified name is invalid. You can use A-Z, a-z, 0-9, spaces, multi-byte characters, and the following characters: - _ . @ Enter a valid logical group name.	*Cause* - *Action* Enter a valid logical group name.
KAIC16167-E	A device number in the filter conditions contains a character that is not valid. Revise the device numbers.	*Cause* - *Action* Revise the device numbers.

Message ID	Message Text	Description
KAIC16168-E	Too many device numbers are specified in the filter conditions. Specify no more than 100 device numbers.	*Cause* - *Action* Specify no more than 100 device numbers.
KAIC16169-E	The format of a device number in the filter conditions is not valid. Revise the device numbers.	*Cause* - *Action* Revise the device numbers.
KAIC16170-E	All hosts in a logical group cannot be deleted. Select hosts to be deleted again.	*Cause* - *Action* Select hosts to be deleted again.
KAIC16171-E	All volumes in a logical group cannot be deleted. Select volumes to be deleted again.	*Cause* - *Action* Select volumes to be deleted again.
KAIC16172-E	The start time (*monitoring-start-time*) must be earlier than the end time (*monitoring-end-time*). Verify the start and end times.	*Cause* - *Action* Verify the start and end times.
KAIC16173-E	The difference between the start time (*monitoring-start-time*) and the end time (*monitoring-end-time*) is less than one hour. Specify start and end times that are at least one hour apart.	*Cause* - *Action* Specify start and end times that are at least one hour apart.
KAIC16174-E	No pools and parity groups for Create Volumes. Create a pool or a parity group.	*Cause* - *Action* Create a pool or a parity group.
KAIC16175-E	Too many pool IDs are specified in the filter conditions. Specify no more than 100 pool IDs.	*Cause* - *Action* Specify no more than 100 pool IDs.
KAIC16176-E	The format of a pool ID in the filter conditions is not valid. Valid pool ID format is *poolidprefix* 123. Revise the pool IDs. And use commas to enter multiple values.	*Cause* - *Action* Revise the pool IDs. And use commas to enter multiple values.

Message ID	Message Text	Description
KAIC16177-E	Enter a value larger than 0.	*Cause* - *Action* -
KAIC16178-E	The task duration was not specified. Enter the task duration.	*Cause* - *Action* Enter the task duration.
KAIC16179-E	The parity group of the search condition is specified incorrectly. Verify the parity group.	*Cause* - *Action* Verify the parity group.
KAIC16180-E	The specified value is outside the valid range. Specify an integer from *minimum* to *maximum*.	*Cause* - *Action* Specify an integer from *minimum* to *maximum*.
KAIC16181-E	Use commas to enter multiple values.	*Cause* - *Action* -
KAIC16182-E	Use a hyphen to enter a range of values. Specify only one range.	*Cause* - *Action* -
KAIC16183-E	You can enter only one value for this operator.	*Cause* - *Action* -
KAIC16184-E	You cannot use more than one LDEV ID format. The format can be one of 123, 00:12, or 00:12:34.	*Cause* - *Action* -
KAIC16185-E	The pool ID format is *pool-ID-prefix* 123.	*Cause* - *Action* -
KAIC16186-I	All the selected volumes do not belong to the same storage system. Select volumes that	*Cause* - *Action*

Message ID	Message Text	Description
	belong to the same storage system.	Select volumes that belong to the same storage system.
KAIC16187-E	The capacity must be larger than the current capacity. Specify a value larger than *current-capacity*.	*Cause* - *Action* Specify a value larger than *current-capacity*.
KAIC16188-E	You cannot specify a capacity that exceeds the subscription limit of the pool. Specify a value no larger than *limit-of-expanded-capacity*.	*Cause* - *Action* Specify a value no larger than *limit-of-expanded-capacity*.
KAIC16189-W	The subscription of the pool will exceed the warning threshold after expanding the volume. Expand the pool after expanding the volume.	*Cause* - *Action* Expand the pool after expanding the volume.
KAIC16190-E	Unable to find the specified host. The specified host might be deleted. Cancel the operation and verify the resources.	*Cause* The specified host might be deleted. *Action* Cancel the operation and verify the resources.
KAIC16191-E	The user ID is not entered. Enter a user ID.	*Cause* - *Action* Enter a user ID.
KAIC16192-E	The password is not entered. Enter a password.	*Cause* - *Action* Enter a password.
KAIC16193-W	Request timed out. Add additional criteria and try again.	*Cause* - *Action* Add additional criteria and try again.
KAIC16194-E	Unable to expand the DP volume because the total DP volume capacity (*total-dp-volume-capacity*) exceeds the capacity limit of the storage system (*maximum-total-dp-volume-capacity-in-storage-system*).	*Cause* - *Action* -

Message ID	Message Text	Description
KAIC16195-W	Only Device Manager and Tiered Storage Manager license information appears because server initialization has not completed. To manage licenses of other products, close this dialog, wait a few minutes, and try again.	*Cause* - *Action* To manage licenses of other products, close this dialog, wait a few minutes, and try again.
KAIC16196-W	No licenses are registered for your product. More information does not appear because the server initialization has not completed. Wait a few minutes, and refresh the screen.	*Cause* - *Action* Wait a few minutes, and refresh the screen.
KAIC16197-E	The file server name contains an invalid character. If error occurs repeatedly, contact the Support Center.
KAIC16316-E	Allocation information was changed for volumes without a LUN or volumes related to LUNs. Open the [Select LU Number] dialog box from [iSCSI Target and LUN Settings], and select a LUN.	*Cause* - *Action* Open the [**Select LU Number**] dialog box from [**iSCSI Target and LUN Settings**], and select a LUN.
KAIC16317-E	You cannot select more than 256 volumes. *selected-num* volumes are selected. Select 256 or fewer volumes.	*Cause* *selected-num* volumes are selected. *Action*

Message ID	Message Text	Description
		Select 256 or fewer volumes.
KAIC16318-E	The difference between the Replication Depletion Alert threshold(*replication-depletion-alert-threshold*%) and the Replication Data Released threshold(*replication-data-released-threshold*%) is less than or equal to 5%. Or the Replication Depletion Alert threshold(*replication-depletion-alert-threshold*%) is greater than or equal to the Replication Data Released threshold(*replication-data-released-threshold*%). Modify the thresholds so that the difference between the Replication Depletion Alert threshold(*replication-depletion-alert-threshold*%) and the Replication Data Released threshold(*replication-data-released-threshold*%) is greater than 5%. And the Replication Data Released threshold should be greater than the Replication Depletion Alert.	*Cause* - *Action* Modify the thresholds so that the difference between the Replication Depletion Alert threshold(*replication-depletion-alert-threshold*%) and the Replication Data Released threshold(*replication-data-released-threshold*%) is greater than 5%. And the Replication Data Released threshold should be greater than the Replication Depletion Alert.
KAIC16319-W	Used % (*current-used-percent*%) exceeds the Replication Depletion Alert threshold (*replication-depletion-alert-threshold*%). Specify a value for the Replication Depletion Alert threshold that is greater than its current value.	*Cause* - *Action* Specify a value for the Replication Depletion Alert threshold that is greater than its current value.
KAIC16320-W	Used % (*current-used-percent*%) exceeds the Replication Data Released threshold (*replication-data-released-threshold*%). The capacity used for replication differential data and management data will be released. Specify a value for the Replication Data Released threshold that is greater than its current value.	*Cause* - *Action* Specify a value for the Replication Data Released threshold that is greater than its current value.
KAIC16322-E	There is a file server or NAS module without an alternate path. Edit the paths so that each file server or NAS module in the cluster has an alternate path.	*Cause* - *Action* Edit the paths so that each file server or NAS module in the cluster has an alternate path.
KAIC16323-E	No file systems volumes are selected. Select volumes that are for file systems.	*Cause* -

Message ID	Message Text	Description
		Action Select volumes that are for file systems.
KAIC16324-W	These ports are used for volume allocation not applicable to this operation. The volumes that belong to the host group are visible from the added host ports. (Port name:*port-names*)	*Cause* - *Action* -
KAIC16325-I	The WORM settings are enabled.	*Cause* - *Action* -
KAIC16326-W	Existing reports will be deleted in the order of their creation times (older times first), because the number of reports exceeds the upper limit. (upper limit = *upper-limit*, existing reports = *the-number-of-existing-reports*) If there are unnecessary reports, delete them.	*Cause* - *Action* If there are unnecessary reports, delete them.
KAIC16327-E	Specify a profile name.	*Cause* - *Action* -
KAIC16328-E	Specify a name that is no more than *max-byte* characters.	*Cause* - *Action* -
KAIC16329-E	Specify a description that is no more than *max-byte* characters.	*Cause* - *Action* -
KAIC16330-E	The specified name is invalid. You can use A-Z, a-z, 0-9, spaces, multi-byte characters, and the following characters: - _ . @ Enter a valid snapshot name.	*Cause* - *Action* Enter a valid snapshot name.
KAIC16331-W	The target host is a file server or NAS module. Check the existence of other file server or NAS module which configures a cluster with the target host. If necessary, the volume is unallocated from the file server or NAS module.	*Cause* - *Action* Check the existence of other file server or NAS module which configures a cluster with the target host. If necessary, the

Message ID	Message Text	Description
		volume is unallocated from the file server or NAS module.
KAIC16332-E	The date and time specified in *fieldname* is not valid. Specify the date and time or clear the entry.	*Cause* - *Action* Specify the date and time or clear the entry.
KAIC16333-E	The date and time specified for *endfieldname* is earlier than *startfieldname*. For *endfieldname*, specify a date and time that is later than *startfieldname*.	*Cause* - *Action* For *endfieldname*, specify a date and time that is later than *startfieldname*.
KAIC16334-E	The number of volumes exceeds *maxvolumenum*. From [Select Volumes], select up to *maxvolumenum* volumes.	*Cause* - *Action* From [**Select Volumes**], select up to *maxvolumenum* volumes.
KAIC16335-W	The number of volumes exceeds *volumenum*. It may take a few minutes to display the chart. If displaying a chart takes too much time, select volumes from [Select volumes].	*Cause* - *Action* If displaying a chart takes too much time, select volumes from [**Select volumes**].
KAIC16336-E	The chart could not be displayed because a timeout occurred with the network connection to Tuning Manager. There might be a problem with the network connection to Tuning Manager, or the load on the Tuning Manager server might be high. Revise the Tuning Manager network settings or status, revise the Tuning Manager environment, and then retry the operation. If the error persists, detailed investigation is required to determine the cause and to resolve the problem. Contact the Support Center, who might ask you to collect troubleshooting information.	*Cause* There might be a problem with the network connection to Tuning Manager, or the load on the Tuning Manager server might be high. *Action* Revise the Tuning Manager network settings or status, revise the Tuning Manager environment, and then retry the operation. If the error persists, detailed investigation is required to determine the cause and to resolve the problem. Contact the Support Center, who might ask you to collect troubleshooting information.
KAIC16337-E	The schedule has not changed. Change the schedule or close this dialog box.	*Cause* - *Action* Change the schedule or close this dialog box.

Message ID	Message Text	Description
KAIC16338-W	More than one profile is scheduled for the same volumes in the same time. (profile = *tierprofilenames*) Revise the profile schedule.	*Cause* - *Action* Revise the profile schedule.
KAIC16339-W	The volume tiering policy is inconsistent with the tiers defined in the profile. (profile = *tierprofilenames*, volumes = *volumenames*) Revise the volume tiering policy. If this schedule definition is not changed, profile may be lost because the data may not be properly reallocated to the hardware tiers.	*Cause* - *Action* Revise the volume tiering policy. If this schedule definition is not changed, profile may be lost because the data may not be properly reallocated to the hardware tiers.
KAIC16341-I	This estimation is the approximate duration of this action when no profiles are already applied for any of the target volumes and the storage system is working under typical workload.	*Cause* - *Action* -
KAIC16342-I	This estimation is the approximate duration of this action when the profile is already applied for all of the target volumes and the storage system is working under typical workload.	*Cause* - *Action* -
KAIC16343-I	This estimation is the approximate duration of this action when the storage system is working under typical workload.	*Cause* - *Action* -
KAIC16344-W	System performance might become slow, because there are too many reports. Delete unnecessary reports.	*Cause* - *Action* Delete unnecessary reports.
KAIC16345-E	The selected storage systems cannot be checked, because they include at least one unsupported storage system. In the previous screen, check the status of the storage systems.	*Cause* - *Action* In the previous screen, check the status of the storage systems.
KAIC16346-E	You do not have permission to delete the report. Select reports for which you have deletion permission.	*Cause* - *Action* Select reports for which you have deletion permission.
KAIC16347-W	Review Now.	*Cause* -

Message ID	Message Text	Description
		Action Review Now.
KAIC16348-E	The number of selected volumes exceeds the limit. Select *num-of-volumes* or fewer volumes.	*Cause* - *Action* Select *num-of-volumes* or fewer volumes.
KAIC16349-E	The selected logical group does not include any DP volumes that are in an HDT pool, or you do not have permission for the volumes. Revise the details of the logical group.	*Cause* - *Action* Revise the details of the logical group.
KAIC16350-E	A health check cannot be performed for one of the selected storage systems. (storage system = *storage-system-name*) Refresh the screen from which the storage system was selected. To verify that a health check is possible, check the "Health Check viable?" column.	*Cause* - *Action* Refresh the screen from which the storage system was selected. To verify that a health check is possible, check the "Health Check viable?" column.
KAIC16351-I	Data placement profile is consistent between Device Manager and the storage system.	*Cause* - *Action* -
KAIC16352-W	Data placement profile is inconsistent between Device Manager and the storage system (*link-to-repair-inconsistencies-dialog*).	*Cause* - *Action* -
KAIC16353-E	Profiles cannot be scheduled. Create profiles before scheduling them.	*Cause* - *Action* Create profiles before scheduling them.
KAIC16354-W	Profiles cannot be scheduled. You do not have permission. Verify that you have the required permissions for the all DP volumes corresponding to profiles.	*Cause* You do not have permission. *Action* Verify that you have the required permissions for the all DP volumes corresponding to profiles.
KAIC16355-E	*fieldname* is not valid. Specify the time and day or clear the entry.	*Cause* - *Action*

Message ID	Message Text	Description
		Specify the time and day or clear the entry.
KAIC16356-E	Cannot operate the specified task. Confirm the status of the specified task. If the task was registered from the [Data Placement Profile Schedule Settings] dialog, operations must be performed on that task from the [Data Placement Profile Schedule Settings] dialog.	*Cause* - *Action* Confirm the status of the specified task. If the task was registered from the [**Data Placement Profile Schedule Settings**] dialog, operations must be performed on that task from the [**Data Placement Profile Schedule Settings**] dialog.
KAIC16357-W	There are no volumes in some scheduled data placement profiles. (Data Placement Profiles:*data-placement-profile-names*) Delete the scheduled profiles with no volumes.	*Cause* - *Action* Delete the scheduled profiles with no volumes.
KAIC16358-W	You cannot perform this operation on tasks registered from the [Data Placement Profile Schedule Settings] dialog. (task name = *task-name*) Perform the operation from the [Data Placement Profile Schedule Settings] dialog.	*Cause* - *Action* Perform the operation from the [**Data Placement Profile Schedule Settings**] dialog.
KAIC16359-W	Admin Services settings cannot be set because a file server in the cluster is being updated or the cluster contains file servers of different firmware versions. To specify Admin Services settings, wait until all file servers in the cluster finish updating, and ensure that the firmware versions of the file servers in the cluster are the same.	*Cause* - *Action* To specify Admin Services settings, wait until all file servers in the cluster finish updating, and ensure that the firmware versions of the file servers in the cluster are the same.
KAIC16360-W	Admin Services settings cannot be specified because the firmware version of the file server is newer than the firmware version of the NAS Manager. To specify Admin Services settings, revise the firmware versions of the NAS Manager and file system.	*Cause* - *Action* To specify Admin Services settings, revise the firmware versions of the NAS Manager and file system.
KAIC16361-W	Dynamic Tiering or Dynamic Provisioning is selected for the volume type. To allocate DP volumes to NAS Platform, manually select volumes that have enough capacity. If the DP pool does not have enough capacity,	*Cause* - *Action* To allocate DP volumes to NAS Platform, manually select volumes that have enough capacity. If the

Message ID	Message Text	Description
	the file system might become corrupted.	DP pool does not have enough capacity, the file system might become corrupted.
KAIC16362-W	To allocate DP volumes to NAS Platform, manually select volumes that have enough capacity for the DP pool. If the DP pool does not have enough capacity, the file system might become corrupted.	*Cause* - *Action* -
KAIC16363-E	The file system name contains invalid characters. Multi-byte characters and the following characters cannot be used: *invalid-characters*	*Cause* - *Action* -
KAIC16364-E	The file system name is too long. Enter no more than *string-length*.	*Cause* - *Action* Enter no more than *string-length*.
KAIC16365-E	The entered file system name (*file-system-name*) cannot be used because it is already in use in *file-server-name-or-cluster-name*. Enter a different file system name.	*Cause* - *Action* Enter a different file system name.
KAIC16366-E	The entered file system name (*file-system-name*) cannot be used because it is reserved for *file-server-name-or-cluster-name*. Enter a different file system name.	*Cause* - *Action* Enter a different file system name.
KAIC16367-E	The path name contains invalid characters. The following characters cannot be used: *invalid-characters*	*Cause* - *Action* -
KAIC16368-E	The path is too long. Enter no more than *string-length*.	*Cause* - *Action* Enter no more than *string-length*.
KAIC16369-E	The path format is not correct. Start with a separator character. You can use *usable-separators* as a separator. The separator cannot be used sequentially.	*Cause* - *Action* Start with a separator character. You can use *usable-separators* as a separator. The separator cannot be used sequentially.

KAIC16576-W	The selected host modes for the primary and secondary sides are different.	*Cause* - *Action* -
KAIC16577-I	The selected LDEVs have different configurations for the P-VOL and S-VOL.	*Cause* - *Action* -
KAIC16578-E	No quorum disk was found that can be used for the selected primary and secondary storage systems. Set up a quorum disk, or verify that the selected storage systems are correct.	*Cause* - *Action* Set up a quorum disk, or verify that the selected storage systems are correct.
KAIC16579-I	The selected volumes contain global-active device pair volumes. Information about the LUN paths of other volumes in global-active device pair configurations appears at the bottom of the wizard window. Refer to this information when editing LUN paths.	*Cause* - *Action* Information about the LUN paths of other volumes in global-active device pair configurations appears at the bottom of the wizard window. Refer to this information when editing LUN paths.
KAIC16580-W	Information about some other volumes that make up global-active device pairs could not be obtained. The storage systems to which the other global-active device pair volumes belong might not have been added or refreshed, or you do not have permission to view the volume information. Check the status of the storage systems to which the other global-active device pair volumes belong, or execute this task as a user who has permission to view the volume information, or ask the system administrator to grant you the appropriate permissions.	*Cause* The storage systems to which the other global-active device pair volumes belong might not have been added or refreshed, or you do not have permission to view the volume information. *Action* Check the status of the storage systems to which the other global-active device pair volumes belong, or execute this task as a user who has permission to view the volume information, or ask the system administrator to grant you the appropriate permissions.

Message ID	Message Text	Description
KAIC16581-W	The selected pools contain global-active device pair volumes. When changing HDT settings, we recommend applying the same settings to pools that contain other volumes that make up global-active device pairs with volumes in the original affected pool.	*Cause* - *Action* When changing HDT settings, we recommend applying the same settings to pools that contain other volumes that make up global-active device pairs with volumes in the original affected pool.
KAIC16582-E	The task *task-name* failed. Open the task details dialog box and verify the contents of the error message.	*Cause* - *Action* Open the task details dialog box and verify the contents of the error message.
KAIC16583-I	The task (*task-name*) was registered.	*Cause* - *Action* -
KAIC16584-I	The task (*task-name*) completed.	*Cause* - *Action* -
KAIC16585-E	Not enough storage systems are available for global-active device. At least two storage systems that support global-active device are required. Add storage systems.	*Cause* At least two storage systems that support global-active device are required. *Action* Add storage systems.
KAIC16586-E	No storage system that can be selected. Add a storage system that will be used as a quorum storage system.	*Cause* - *Action* Add a storage system that will be used as a quorum storage system.
KAIC16587-E	Quorum disk ID (*quorum-disk-id*) is already in use. Because the target volume is virtualized and used as quorum disk in the remote storage system, the same quorum disk ID (*quorum-disk-id*) must be specified. Revise the specification or remove quorum disk(*quorum-disk-id*) to enable the ID, and then retry the operation.	*Cause* Because the target volume is virtualized and used as quorum disk in the remote storage system, the same quorum disk ID (*quorum-disk-id*) must be specified. *Action*

Message ID	Message Text	Description
		Revise the specification or remove quorum disk(*quorum-disk-id*) to enable the ID, and then retry the operation.
KAIC16588-E	There are no available quorum disk ID. They are used in the internal storage system or the remote storage system. Remove unused quorum disks to enable the same ID in both storage systems, and then retry the operation.	*Cause* They are used in the internal storage system or the remote storage system. *Action* Remove unused quorum disks to enable the same ID in both storage systems, and then retry the operation.
KAIC16589-W	The selected LU start numbers for the primary and secondary sides are different.	*Cause* - *Action* -
KAIC16590-E	This field cannot be empty. Specify a name.	*Cause* - *Action* Specify a name.
KAIC16591-W	The selected volume types for the primary and secondary sides are different.	*Cause* - *Action* -
KAIC16592-W	The total capacity allocated to file systems in the storage pool exceeds the DP pool (storage system = *storagesystemname*, pool ID = *poolid*) capacity used by the storage pool. (total capacity allocate limit to file systems = *total-allocation-limit-of-the-filesystems*, DP pool capacity = *dppool-capacity*) The following problems might occur: (1) Attempts to create a file system fail. (2) The capacity of the file system is smaller than the capacity configured. (3) You cannot write to the file system. Verify the size of the file system and expand the DP pool, if needed.	*Cause* - *Action* Verify the size of the file system and expand the DP pool, if needed.
KAIC16593-W	No DP pool or parity group meets the specified conditions for the Primary Site. Manually select a DP pool or parity group, or modify the specified conditions.	*Cause* - *Action*

Message ID	Message Text	Description
		Manually select a DP pool or parity group, or modify the specified conditions.
KAIC16594-W	The selected numbers of paths for the primary and secondary sides are different.	*Cause* - *Action* -
KAIC16595-W	The selected resources cannot be deleted because they belong to the default virtual storage machine. Cancel the request, or revise the resources to be deleted.	*Cause* - *Action* Cancel the request, or revise the resources to be deleted.
KAIC16596-W	Secondary volumes cannot be set automatically. Select volumes manually, or change the conditions.	*Cause* - *Action* Select volumes manually, or change the conditions.
KAIC16597-E	A quorum disk cannot be created with the specified volume capacity. A capacity larger than 12.01 GB is required for creation of a quorum disk. Revise the volume capacity.	*Cause* A capacity larger than 12.01 GB is required for creation of a quorum disk. *Action* Revise the volume capacity.
KAIC16599-E	The substance specifications differ on the primary and secondary sides. Using the same configuration is recommended. Specify different instance IDs or different pair management servers.	*Cause* - *Action* Specify different instance IDs or different pair management servers.
KAIC16600-E	No remote path is set between the selected storage system at the primary site and any of the storage systems at the secondary site. Set a remote path, or select a different primary storage system.	*Cause* - *Action* Set a remote path, or select a different primary storage system.
KAIC16601-W	Storage characteristics differ on the primary and secondary sides. Using the same configuration is recommended.	*Cause* - *Action* -
KAIC16602-W	The selected volumes contain the following global-active device pair volumes: *ldev-ids* We recommend creating a profile that includes the other volumes that make up the global-active device pairs.	*Cause* - *Action* We recommend creating a profile that includes the other volumes

Message ID	Message Text	Description
		that make up the global-active device pairs.
KAIC16603-E	The profile cannot be created. The selected volumes include a GAD Reserved Volumes (*ldev-ids*). Remove GAD Reserved Volumes from profile or release the GAD Reserved status, and then try the operation again.	*Cause* The selected volumes include a GAD Reserved Volumes (*ldev-ids*). *Action* Remove GAD Reserved Volumes from profile or release the GAD Reserved status, and then try the operation again.
KAIC16604-W	The selected profile contains the following global-active device pair volumes: *ldev-ids* We recommend defining the same profile for the volumes in a global-active device pair. Verify that both the P-VOL and S-VOL are included in the same profile.	*Cause* - *Action* We recommend defining the same profile for the volumes in a global-active device pair. Verify that both the P-VOL and S-VOL are included in the same profile.
KAIC16605-E	The operation cannot be executed for the profile. The selected profile contains one or more GAD Reserved Volumes (*ldev-ids*). Make sure that the GAD Reserved status of each volume (*ldev-ids*) is released, and then try the operation again.	*Cause* The selected profile contains one or more GAD Reserved Volumes (*ldev-ids*). *Action* Make sure that the GAD Reserved status of each volume (*ldev-ids*) is released, and then try the operation again.
KAIC16606-W	The selected volumes include global-active device paired volumes. We recommend performing the same operation on the other volumes that make up global-active device pairs.	*Cause* - *Action* We recommend performing the same operation on the other volumes that make up global-active device pairs.
KAIC16607-W	The target volumes contain the following global-active device pair volumes: *ldev-ids* We recommend editing the tiering policy so that it contains the other volumes that make up global-active device pairs.	*Cause* - *Action* We recommend editing the tiering policy so that it contains the other volumes that make up global-active device pairs.
KAIC16608-W	The total capacity allocated to file systems in the storage pool exceeds the DP pool (storage system = *storagesystemname*, pool ID = *poolid*) capacity used by the storage pool. (total capacity allocate limit to file systems =	*Cause* - *Action* Verify the size of the file system and expand the DP pool, if needed.

Message ID	Message Text	Description
	total-allocation-limit-of-the-filesystems, DP pool capacity = *dppool-capacity*) The following problems might occur: (1) Attempts to expand the file system fail. (2) The capacity of the file system is smaller than the capacity configured. (3) You cannot write to the file system. Verify the size of the file system and expand the DP pool, if needed.	
KAIC16609-E	No pair management server was found for the selected storage system. Set up the pair management server.	*Cause* - *Action* Set up the pair management server.
KAIC16610-E	Multiple volumes cannot be selected and then allocated as command devices. The command device option is valid only when allocating a single volume. Specify only one volume. To allocate multiple volumes as command devices, allocate each command device separately.	*Cause* The command device option is valid only when allocating a single volume. *Action* Specify only one volume. To allocate multiple volumes as command devices, allocate each command device separately.
KAIC16611-E	The selected volume cannot be used for a command device of global-active device. User authentication for the command device is disabled. Select a command device with user authentication enabled.	*Cause* User authentication for the command device is disabled. *Action* Select a command device with user authentication enabled.
KAIC16612-E	The setting for whether to create a new instance ID or use an existing instance ID is different between the primary and secondary sides. Specify the same settings on the primary and secondary sides.	*Cause* - *Action* Specify the same settings on the primary and secondary sides.
KAIC16613-E	The selected pair management server and instance ID on the primary side are the same as those on the secondary side. When using the same pair management server for both the primary and secondary sides, specify a different instance ID for each side.	*Cause* - *Action* When using the same pair management server for both the primary and secondary sides, specify a different instance ID for each side.
KAIC16614-I	Volumes that cannot be changed to global-active device volumes are not displayed.	*Cause* - *Action*

	resource group, select the pool from the [DP Pools] tab, and then remove it.	To remove a DP pool volume or deduplication system data volume from a resource group, select the pool from the [DP Pools] tab, and then remove it.
KAIC16622-I	All volumes in the same DP pool will be registered at the same time. If the deduplication function is enabled, deduplication system data volumes will also be registered at the same time.	*Cause* - *Action* -
KAIC16623-I	All volumes in the same DP pool will be removed at the same time. If the deduplication function is enabled, deduplication system data volumes will also be removed at the same time.	*Cause* - *Action* -
KAIC16624-E	Because the currently selected target storage system will exceed the maximum number of virtual storage machines allowed, select another target storage system. The maximum number of virtual storage machines that can be created is *the-number-of-creatable-virtual-storage-machines*. The current number of created virtual storage machines is *the-number-of-created-vsm*. *the-number-of-vsm-to-be-created* virtual storage machines must be created to migrate volumes from the selected source storage system to a target storage system.	*Cause* The maximum number of virtual storage machines that can be created is *the-number-of-creatable-virtual-storage-machines*. The current number of created virtual storage machines is *the-number-of-created-vsm*. *the-number-of-vsm-to-be-created* virtual storage machines must be created to migrate volumes from the selected source storage system to a target storage system. *Action* -
KAIC16625-E	Enter a migration job name.	*Cause* - *Action* -
KAIC16626-E	Enter a migration job name that does not exceed *max-length* characters.	*Cause* - *Action* -
KAIC16627-E	The entered migration job name contains one or more invalid characters. Valid characters are alphanumeric characters (A-Z, a-z, and 0-9) and spaces, as well as the following characters: ~ ` ! @ # $ % ^ & ( ) _ + - = { } [ ] ' . Enter a name that contains only valid characters.	*Cause* - *Action* Enter a name that contains only valid characters.

Message ID	Message Text	Description
KAIC16628-E	Enter a description that does not exceed *max-length* characters.	*Cause* - *Action* -
KAIC16629-E	The entered description contains one or more invalid characters. Valid characters are alphanumeric characters (A-Z, a-z, and 0-9) and spaces, as well as the following characters: ~ ` ! @ # $ % ^ & ( ) _ + - = { } [ ] ' . Enter a description that contains only valid characters.	*Cause* - *Action* Enter a description that contains only valid characters.
KAIC16630-W	No hosts are available. Register hosts, or select volumes manually.	*Cause* - *Action* Register hosts, or select volumes manually.
KAIC16631-E	The number of migration job volumes exceeds the recommended maximum. Ensure that the total number of volumes registered for the migration job does not exceed *max-ldevs*.	*Cause* - *Action* Ensure that the total number of volumes registered for the migration job does not exceed *max-ldevs*.
KAIC16632-I	The following virtual storage machines will be created. (1) The virtual storage machines to which the model and serial number of the source storage system have been assigned. (2) The virtual storage machines to which the virtual model and virtual serial number of data migration resource groups using virtual IDs have been assigned.	*Cause* - *Action* -
KAIC16633-W	Multiple resource groups that were used for data migration using virtual IDs are assigned to one HDvM resource group (*resource-group-name*). This is not the recommended configuration. The following is recommended: Verify the configuration of the resource groups so that one resource group used for data migration using virtual IDs is assigned to one HDvM resource group.	*Cause* This is not the recommended configuration. *Action* The following is recommended: Verify the configuration of the resource groups so that one resource group used for data migration using virtual IDs is assigned to one HDvM resource group.

Message ID	Message Text	Description
KAIC16634-I	The user groups and associated user group roles assigned to the default resource group of a source storage system will be assigned to the resource groups (*the-name-of-all-resource-groups-that-are-created-in-Virtual-Storage-Machine*) to be created in the virtual storage machine (*target-Virtual-Storage-Machine-name*).	*Cause* - *Action* -
KAIC16635-I	External paths must be set for each virtual storage machine to be created in the target storage system.	*Cause* - *Action* -
KAIC16636-W	The label of a source volume (*volume*) cannot be reflected in the target storage system. The label is too long (maximum number of characters = *32*), or contains invalid characters. Valid characters are A-Z, a-z, 0-9, spaces, and the following characters: ~ ` ! @ # $ % ^ & ( ) _ + - = { } [ ] . ' Revise the label of the source volume. Alternatively, after this task finishes executing, manually set the label of the target volume.	*Cause* The label is too long (maximum number of characters = *32*), or contains invalid characters. Valid characters are A-Z, a-z, 0-9, spaces, and the following characters: ~ ` ! @ # $ % ^ & ( ) _ + - = { } [ ] . ' *Action* Revise the label of the source volume. Alternatively, after this task finishes executing, manually set the label of the target volume.
KAIC16637-E	No mapped port exists. Migration requires a mapped port. Revise the mapped port settings.	*Cause* Migration requires a mapped port. *Action* Revise the mapped port settings.
KAIC16638-I	From among the source storage ports used for external paths between the source storage system and the target virtual storage machine (*vsm-name*), virtual IDs will be set for storage ports without virtual IDs to virtualize the port.	*Cause* - *Action* -
KAIC16639-I	From among the source storage ports used for external paths between the source storage system and the target virtual storage machine (*vsm-name*), virtual IDs will be removed from storage ports with virtual IDs to unvirtualize the port.	*Cause* - *Action* -

Message ID	Message Text	Description
KAIC16640-E	No external paths are set. Migration requires that external paths be set. Set external paths.	*Cause* Migration requires that external paths be set. *Action* Set external paths.
KAIC16641-E	The number of external paths between the source storage system and the target virtual storage machine (*vsm-name*) exceeds the upper limit (*8*). Remove the unnecessary external path.	*Cause* - *Action* Remove the unnecessary external path.
KAIC16642-W	For a volume excluded from the migration, restore the volume status according to the progress of the migration job, and then restart the migration job, or perform the migration again.	*Cause* - *Action* -
KAIC16643-E	The selected target host group cannot be edited because it has already been created.	*Cause* - *Action* -
KAIC16644-I	Do you want to change the analysis time (*specifieddatetime*)?	*Cause* - *Action* -
KAIC16645-E	The selected storage system does not support MP Blade/Unit analysis.	*Cause* - *Action* -
KAIC16646-E	The selected resource is locked. To move the resource, release the lock.	*Cause* - *Action* To move the resource, release the lock.
KAIC16647-E	The selected resource cannot be moved. Revise the resource allocation lower.	*Cause* - *Action* Revise the resource allocation lower.
KAIC16648-I	If you close this window, the MP Blades/Units Resource Assignment Plan will be lost. Do you want to continue?	*Cause* - *Action* -

Message ID	Message Text	Description
KAIC16649-W	One or more volumes allocated to the selected host are allocated to another host. Register a migration job that includes the following host: *recommended-hosts*	*Cause* - *Action* Register a migration job that includes the following host: *recommended-hosts*
KAIC16650-W	In addition to volumes of the selected logical group, volumes not included in the selected logical group are also allocated to the following host: *recommended-hosts* Register a migration job that includes all volumes associated with the host. Add volumes to the migration job as necessary, and then try again.	*Cause* - *Action* Register a migration job that includes all volumes associated with the host. Add volumes to the migration job as necessary, and then try again.
KAIC16651-W	The host to which the selected volumes are allocated does not exist. (volumes = *unallocated-ldev*) The host is not registered in Device Manager, or is allocated to a port for which LUN security is disabled. Register a valid host in Device Manager.	*Cause* The host is not registered in Device Manager, or is allocated to a port for which LUN security is disabled. *Action* Register a valid host in Device Manager.
KAIC16652-E	There are one or more migration target volumes associated with multiple source volumes. Re-specify the target volumes for data migration.	*Cause* - *Action* Re-specify the target volumes for data migration.
KAIC16653-E	The resource selected as a target for an assignment change cannot be locked.	*Cause* - *Action* -
KAIC16654-W	Volumes other than the selected volumes are also assigned to this host. (host name = *recommended-hosts*) Register the migration job so that all host volumes are included.	*Cause* - *Action* Register the migration job so that all host volumes are included.
KAIC16655-E	There are no config files that can be migrated. The config files for the source storage system have not been saved yet, or HDvM cannot recognize them. Refresh the storage system information. If config files were added after you created the migration project,	*Cause* The config files for the source storage system have not been saved yet, or HDvM cannot recognize them. *Action* Refresh the storage system information. Message ID	Message Text	Description
	delete the migration project and then re-create the project.	added after you created the migration project, delete the migration project and then re-create the project.
KAIC16656-E	The selected config files include one or more config files that HDvM cannot use to re-create copy pairs in the target storage system. There are conditions on the config files that HDvM can use to re-create copy pairs in a target storage system. From the candidates, remove non-migratable config files.	*Cause* There are conditions on the config files that HDvM can use to re-create copy pairs in a target storage system. *Action* From the candidates, remove non-migratable config files.
KAIC16657-W	The selected config files include one or more config files that have already been migrated to the target storage system. From the candidates, remove the config files that have already been migrated to the target storage system. If you continue without removing these config files, previously migrated config files will be overwritten.	*Cause* - *Action* From the candidates, remove the config files that have already been migrated to the target storage system. If you continue without removing these config files, previously migrated config files will be overwritten.
KAIC16658-E	There are no ShadowImage copy groups that can be created in the target storage system. Either there are no migrated config files that can be used to re-create ShadowImage copy groups in the target storage system, or HDvM cannot recognize them. The target storage system has no primary volumes defined in the config files. Verify that the config file migration task is complete and was successful. Verify that the primary volumes defined in the config files have been created in the target storage system, and have been allocated to the host. Then refresh the storage system information.	*Cause* Either there are no migrated config files that can be used to re-create ShadowImage copy groups in the target storage system, or HDvM cannot recognize them. The target storage system has no primary volumes defined in the config files. *Action* Verify that the config file migration task is complete and was successful. Verify that the primary volumes defined in the config files have been created in the target storage system, and have been allocated to the host. Then refresh the storage system information.
KAIC16659-E	You cannot create more than three ShadowImage copy pairs which use same primary volume. For data migrations that used nondisruptive migration, there are restrictions on the ShadowImage multi-target pair configurations that can be created. After the migration project is complete,	*Cause* For data migrations that used nondisruptive migration, there are restrictions on the ShadowImage multi-target pair configurations that can be created. *Action*

Message ID	Message Text	Description
	create the copy pairs that could not be migrated.	After the migration project is complete, create the copy pairs that could not be migrated.
KAIC16660-E	When ShadowImage copy pairs are in a cascade configuration, you cannot create an L2 copy pair before creating an L1 copy pair. In a cascade configuration, create L1 copy pairs before L2 copy pairs.	*Cause* - *Action* In a cascade configuration, create L1 copy pairs before L2 copy pairs.
KAIC16661-E	One or more config files cannot be saved. In the [Message] column of the "Config Files to Be Saved" table, verify which config files cannot be migrated. Refer to the message to resolve the problem, and then try again.	*Cause* - *Action* In the [**Message**] column of the "Config Files to Be Saved" table, verify which config files cannot be migrated. Refer to the message to resolve the problem, and then try again.
KAIC16662-W	There are one or more config files for which the copy pair configuration cannot be migrated. In the [Message] column of the "Config Files to Be Saved" table, verify which config files cannot be migrated. Refer to the message to resolve the problem, and then try again.	*Cause* - *Action* In the [**Message**] column of the "Config Files to Be Saved" table, verify which config files cannot be migrated. Refer to the message to resolve the problem, and then try again.
KAIC16663-W	One or more volumes not registered in the selected config file are allocated to the following host. (host name = *recommended-hosts*) Create a migration job in units of hosts or volumes.	*Cause* - *Action* Create a migration job in units of hosts or volumes.
KAIC16664-W	The selected volumes are assigned to the following config files. (config files = *recommended-config-files*) Create a migration job in units of config files, hosts, or volumes. Specify the following config files at the same time.	*Cause* - *Action* Create a migration job in units of config files, hosts, or volumes. Specify the following config files at the same time.
KAIC16665-W	One or more volumes registered in the selected config file are assigned to another config file. Specify the following config files at the same time. (config files = *recommended-config-files*)	*Cause* - *Action* Specify the following config files at the same time. (config files = *recommended-config-files*)

Message ID	Message Text	Description
KAIC16666-I	All the config files related to the source storage system have already been saved.	*Cause* - *Action* -
KAIC16667-W	There are no remaining migratable volumes in the source storage system. Delete the migration project.	*Cause* - *Action* Delete the migration project.
KAIC16668-W	One or more config files cannot be migrated. Click the [Add/Remove Config Files] button, and check the reason why the config files cannot be migrated. If you want to use non-migratable config files, resolve the reason why the config files cannot be migrated, and then try again.	*Cause* - *Action* Click the [**Add/Remove Config Files**] button, and check the reason why the config files cannot be migrated. If you want to use non-migratable config files, resolve the reason why the config files cannot be migrated, and then try again.
KAIC16669-I	All config files that could be migrated have already been migrated.	*Cause* - *Action* -
KAIC16670-E	You cannot create two or more ShadowImage copy pairs that use the same secondary-primary volume. For data migrations that used nondisruptive migration, there are restrictions on the ShadowImage multi-target pair configurations that can be created. After the migration project is complete, create the copy pairs that could not be migrated.	*Cause* For data migrations that used nondisruptive migration, there are restrictions on the ShadowImage multi-target pair configurations that can be created. *Action* After the migration project is complete, create the copy pairs that could not be migrated.
KAIC16671-I	There are no user-defined resource groups in the source storage system. Therefore, all resources in the source storage system will be mapped to the virtual storage machine resource pool. Verify the settings and then click [next] button.	*Cause* - *Action* Verify the settings and then click [**next**] button.
KAIC16672-E	The secondary volumes could not be created because the capacity of the selected DP pool or parity group might be insufficient. Check the message in the [Target Pools] or [Target Parity Groups] lists.	*Cause* - *Action*

Message ID	Message Text	Description
		Check the message in the [**Target Pools**] or [**Target Parity Groups**] lists.
KAIC16673-W	The capacity of the selected DP pool might be insufficient. Check the [Message] column of the [Target Pools] table.	*Cause* - *Action* Check the [**Message**] column of the [**Target Pools**] table.
KAIC16674-I	The host mode option (*host-mode-option*) will be set for the following host groups when volumes are virtualized: (*host-group*)	*Cause* - *Action* -
KAIC16675-E	The status of at least one selected volume cannot be changed to "Completed (Manually recover)". (volumes = *ldev-ids*) The selected volumes include at least one volume for which migration is not complete. Check the status of the target volumes.	*Cause* The selected volumes include at least one volume for which migration is not complete. *Action* Check the status of the target volumes.
KAIC16676-E	One or more target secondary volumes are set to multiple source volumes. (target secondary volumes = *ldev-ids*) Re-select the target secondary volumes.	*Cause* - *Action* Re-select the target secondary volumes.
KAIC16678-W	One or more of the selected config files have already been migrated. If you execute this task, these config files will be overwritten. Make sure that overwriting these config files will not cause any problems, and then execute this task.	*Cause* - *Action* Make sure that overwriting these config files will not cause any problems, and then execute this task.
KAIC16679-W	Performance information could not be displayed. (resource type = *resource-type*, storage system name = *storage-system-name*)	*Cause* - *Action* -
KAIC16680-E	The operation is not possible, because you are attempting to use a resource pool of a virtual storage machine that is being used in a data migration using virtual IDs. After the data migration using virtual IDs is complete, try the operation again.	*Cause* - *Action* After the data migration using virtual IDs is complete, try the operation again.

Message ID	Message Text	Description
KAIC16681-I	The default value for the volume capacity was changed because the maximum value of DP volumes that the storage system (*storage-system-name*) can create is *capacity*.	*Cause* - *Action* -
KAIC16683-E	The specified request cannot be performed because a selected parity group includes an external parity group. Select the appropriate parity group, and then try again.	*Cause* - *Action* Select the appropriate parity group, and then try again.
KAIC16684-E	You cannot perform this operation because a selected parity group includes an external parity group. If you want to delete an external parity group, unvirtualize the volume.	*Cause* - *Action* If you want to delete an external parity group, unvirtualize the volume.
KAIC16685-W	If you expand the selected volume, the size of the pool (used capacity) will exceed Used Threshold 1. Expand the volume, and then expand the pool.	*Cause* - *Action* Expand the volume, and then expand the pool.
KAIC16686-E	The DP volume cannot be expanded because the size of the pool (used capacity) will exceed Used Threshold 2. Perform one of the following operations: - Expand the pool - Set the capacity of the volume to *limit-of-expanded-capacity* or lower - Change Used Threshold 2	*Cause* - *Action* Perform one of the following operations: • Expand the pool • Set the capacity of the volume to *limit-of-expanded-capacity* or lower • Change Used Threshold 2
KAIC16687-W	When you allocate a volume with the specified capacity and full allocation enabled, the size of the pool (used capacity) exceeds Used Threshold 1. Expand the pool as necessary.	*Cause* - *Action* Expand the pool as necessary.
KAIC16688-E	When you allocate a volume with the specified capacity and full allocation enabled, the size of the pool (used capacity) exceeds Used Threshold 2. Perform one of the following operations: - Select a different pool - Expand the pool	*Cause* - *Action* Perform one of the following operations: • Select a different pool • Expand the pool

Message ID	Message Text	Description
	- Decrease the capacity of the volume - Disable full allocation - Change Used Threshold 2	• Decrease the capacity of the volume • Disable full allocation • Change Used Threshold 2
KAIC16689-E	The global-active device pair cannot be added to the selected copy group (*copy-group-name*). Device Manager does not support copy groups for which multiple CTG IDs are set. Select copy groups for which only one CTG ID is set.	*Cause* Device Manager does not support copy groups for which multiple CTG IDs are set. *Action* Select copy groups for which only one CTG ID is set.
KAIC16690-I	If you close this window, the settings will be lost. Do you want to continue?	*Cause* - *Action* -
KAIC16691-E	The host cannot be registered in the analysis view. (host name = "*host-name*") More than "*max-host-count*" hosts cannot be registered in an analysis view.	*Cause* More than "*max-host-count*" hosts cannot be registered in an analysis view. *Action* -
KAIC16692-E	A new analysis view cannot be created. You can create up to [Analysis view "*max-analysis-view-count*"] views for an analysis. To create a new analysis view, close the Storage Performance Analysis per Host window, and then try again.	*Cause* You can create up to [Analysis view "*max-analysis-view-count*"] views for an analysis. *Action* To create a new analysis view, close the Storage Performance Analysis per Host window, and then try again.
KAIC16693-E	An analysis chart could not be added. More than "*max-chart-count*" analysis charts cannot be displayed.	*Cause* More than "*max-chart-count*" analysis charts cannot be displayed. *Action* -

KAIC17040-W	At least one volume cannot be migrated. Volumes that do not meet the migration conditions will be excluded from the migration, and only the data on volumes that meet the conditions will be migrated.(*ldev-id*)	*Cause* - *Action* -
KAIC17041-W	The migration-source volumes are in multiple resource groups. If necessary, filter the resource groups.	*Cause* - *Action* If necessary, filter the resource groups.
KAIC17042-W	The migration-source volumes include at least one volume in a copy pair. (*ldev-id*) From the Migration Pair wizard, check the volume details. If necessary, change the pairs.	*Cause* - *Action* From the Migration Pair wizard, check the volume details. If necessary, change the pairs.
KAIC17043-E	The migration cannot be performed because the migration-source volumes are in multiple storage systems. Specify a storage system as a filter condition, and then select migration-source volumes from that storage system.	*Cause* - *Action* Specify a storage system as a filter condition, and then select migration-source volumes from that storage system.
KAIC17044-W	The migration-source volumes include at least one volume making up a LUSE volume. (*ldev-id*) From the Migration Pair wizard, check the volume details. If necessary, change the pairs.	*Cause* - *Action* From the Migration Pair wizard, check the volume details. If necessary, change the pairs.
KAIC17045-E	The migration-source volumes includes a volume that cannot be migrated. From the Migration-Source Volume Selection wizard, filter again the migration-source volumes. Then, identify why the migration-source volumes cannot be migrated.	*Cause* - *Action* From the Migration-Source Volume Selection wizard, filter again the migration-source volumes. Then, identify why the migration-source volumes cannot be migrated.
KAIC17046-E	At least one pair cannot be migrated. From the Migration Pair wizard, change the pairs.	*Cause* - *Action*

Message ID	Message Text	Description
		From the Migration Pair wizard, change the pairs.
KAIC17047-E	There is no migratable migration-source volume that can be migrated. Identify why the migration-source volumes cannot be migrated, and then try again.	*Cause* - *Action* Identify why the migration-source volumes cannot be migrated, and then try again. To identify why they cannot be migrated, see the information displayed in the [**Migration Restriction**] column. Note that this column is not displayed by default. If it is not displayed, click the [**Column settings**] button and then, in the displayed dialog box, configure the settings to display the column.
KAIC17048-E	In the email template *file-name*, there is no blank line that indicates the end of the header. Insert a blank line between the header and the text.	*Cause* - *Action* Insert a blank line between the header and the text.
KAIC17049-E	The email template *file-name* does not exist.	*Cause* - *Action* -
KAIC17050-E	The email template *file-name* is too large. (size of template file: *file-size*, maximum size of template file: *max-file-size*) Review the contents of the template file and reduce its size.	*Cause* - *Action* Review the contents of the template file and reduce its size.
KAIC17051-E	In the email template *file-name*, line *line-number* is too long. (detected line length in bytes: *line-length*, maximum line length in bytes: *max-line-length*) Review the contents of the template file and shorten the line.	*Cause* - *Action* Review the contents of the template file and shorten the line.
KAIC17052-E	An invalid line (line number: *line-number*) exists in the header of email template *file-name*. Use a colon (:) to delineate the word "Subject" from the email subject. Verify that a delimiter colon (:) is included in the line where the error occurred.	*Cause* - *Action* Verify that a delimiter colon (:) is included in the line where the error occurred.

Message ID	Message Text	Description
KAIC17053-E	The same header name has been specified multiple times. (template file name: "*file-name*", header name: "*header-name*") Verify the header.	*Cause* - *Action* Verify the header.
KAIC17054-W	Too many volumes meet your specifications. The number of volumes that meet the specified conditions exceeds the limit. (limit: *number-of-displayable-volumes*) Revise the conditions so that fewer volumes meet them.	*Cause* The number of volumes that meet the specified conditions exceeds the limit. *Action* Revise the conditions so that fewer volumes meet them.
KAIC17055-E	The volume to be operated on does not exist. (storage system name: "*storage-system-name*") Possible causes are as follows: - The specified volume does not exist. - Another user deleted the volume. - You do not have access permissions for the volume. Specify the correct logical device number of the controller, and then retry the operation.	*Cause* Possible causes are as follows: • The specified volume does not exist. • Another user deleted the volume. • You do not have access permissions for the volume. *Action* Specify the correct logical device number of the controller, and then retry the operation.
KAIC17056-E	The specified migration-target pool does not exist. Are you sure you want to restore the default migration destinations of selected migration pairs? The state of several other migration pairs change to "Not Migrate" by the operation. (The source volumes of other migration pairs: *the-paired-source-volumes-which-changes-to-"not-migrate"*)	*Cause* - *Action* -
KAIC17406-I	If a source volume is not being used, we recommend selecting the delete option to delete the volume. Or, after the migration task finishes, we recommend reclaiming the unused capacity of the source volume.	*Cause* - *Action* -
KAIC17407-I	The delete option is unavailable for mainframe volumes. To delete a mainframe volume, after the task ends normally, delete the volume by using Element Manager.	*Cause* - *Action* To delete a mainframe volume, after the task ends normally, delete the volume by using Element Manager.
KAIC17408-I	You cannot delete the volumes enabled for Data Direct Mapping (volumes = [*ldev-ids*]). After the task ends normally, use Device Manager - Storage Navigator to delete a volume for which the Data Direct Mapping attribute is enabled.	*Cause* - *Action* After the task ends normally, use Device Manager - Storage Navigator to delete a volume for which the Data Direct Mapping attribute is enabled.
KAIC17409-I	You cannot reclaim zero pages for the volumes enabled for Data Direct Mapping (volumes = [*ldev-ids*]).	*Cause* - *Action* -
KAIC17410-I	The volume that dedupe and compression is enabled does not	*Cause* -

Message ID	Message Text	Description
	become a target of the shredding. (volumes = *ldev-ids*)	*Action* -
KAIC17411-I	The volume that dedupe and compression is enabled does not become a target of the deleting volume. (volumes = *ldev-ids*)	*Cause* - *Action* -
KAIC18000-E	The access configurations for the NFS export could not be set. (maintenance information = *maintenance-information*) See the message displayed in the maintenance information, and resolve the problem. Then, set access configurations in the Edit NFS Export dialog box.	*Cause* - *Action* See the message displayed in the maintenance information, and resolve the problem. Then, set access configurations in the **Edit NFS Export** dialog box.
KAIC18001-W	The entered path (*path*) was not found. The entered path might be incorrect. To specify an existing file path, select a file path from the tree. To specify a new file path, enter the path manually and select [Create path if it does not exist].	*Cause* The entered path might be incorrect. *Action* To specify an existing file path, select a file path from the tree. To specify a new file path, enter the path manually and select [**Create path if it does not exist**].
KAIC18002-E	The NAS Platform information is not up to date. Synchronize the information with the Device Manager server by executing a synchronize operation in NAS Manager, and then retry the operation.	*Cause* - *Action* Synchronize the information with the Device Manager server by executing a synchronize operation in NAS Manager, and then retry the operation.
KAIC18003-E	The EVS "*evs*" has no file system allocated for shares or exports. Create a file system that can modify shares or exports on the EVS, and then retry the operation.	*Cause* - *Action* Create a file system that can modify shares or exports on the EVS, and then retry the operation.
KAIC18004-E	Multiple volume which cannot be allocated at once are selected. If volumes in virtual mode are selected, select volumes for which the same virtual model and virtual serial number are set, or whose storage system resource group ID is 0. (volumes in virtual mode = *ldev-id*)	*Cause* - *Action* If volumes in virtual mode are selected, select volumes for which the same virtual model and virtual serial number are set, or whose storage system resource group ID

Message ID	Message Text	Description
		is 0. (volumes in virtual mode = *ldev-id*)
KAIC18005-E	A combination of volumes and host groups that cannot set virtual information or allocate volumes is included. Do either of the following: (1) If the host group is in virtual mode, select volumes that have the same virtual model and virtual serial number as the host group, or whose storage system resource group ID is 0. (2) If the host group is not in virtual mode, or the virtual model and virtual serial number are not set, select volumes that are not in virtual mode, or for which a virtual model and virtual serial number are not set.	*Cause* - *Action* Do either of the following: 1. If the host group is in virtual mode, select volumes that have the same virtual model and virtual serial number as the host group, or whose storage system resource group ID is 0. 2. If the host group is not in virtual mode, or the virtual model and virtual serial number are not set, select volumes that are not in virtual mode, or for which a virtual model and virtual serial number are not set.
KAIC18006-E	Virtual ID information cannot be set. Do either of the following: (1) If the host group is in virtual mode, select volumes that satisfy one of the following conditions: (a) All of the following conditions for setting up virtual ID information are satisfied: - The storage system resource group ID is 0. - The volume is not an LUSE volume. - The path is not set. - The volume is not set as the command device. - The volume is not in the process of data migration using virtual IDs. (b) The virtual model and virtual serial number are the same as for the host group. (2) If the host group is not in virtual mode or the virtual model and virtual serial number are not set, select volumes that are not in virtual mode, or for which a virtual model and virtual serial number are not set.	*Cause* - *Action* Do either of the following: 1. If the host group is in virtual mode, select volumes that satisfy one of the following conditions: (a) All of the following conditions for setting up virtual ID information are satisfied: - The storage system resource group ID is 0. - The volume is not an LUSE volume. - The path is not set. - The volume is not set as the command device. - The volume is not in the process of data migration using virtual IDs. (b) The virtual model and virtual serial number are the same as for the host group. 2. If the host group is not in virtual mode or the virtual model and virtual serial number are not set, select

	to complete or cancel them, and then retry the operation.	wait for any other registered tasks to complete or cancel them, and then retry the operation.
KAIC18036-E	The selected storage pool (*storage-pool-name*) cannot be deleted because a file system creation task (*name-of-the-file-system-creation-task*) is associated with it. Temporarily stop the operation, wait for any registered tasks to finish or cancel them, and then retry the operation.	*Cause* - *Action* Temporarily stop the operation, wait for any registered tasks to finish or cancel them, and then retry the operation.
KAIC18037-E	The selected storage pool (*storage-pool-name*) contains one or more file systems. Delete all the file systems on the storage pool, and then retry the operation.	*Cause* - *Action* Delete all the file systems on the storage pool, and then retry the operation.
KAIC18038-E	The storage pool could not be created. The number of storage pools (*maximum-number-of-storage-systems-able-to-be-created*) exceeds the maximum number that can be created in the server or cluster. Delete any unnecessary storage pools and then try again.	*Cause* The number of storage pools (*maximum-number-of-storage-systems-able-to-be-created*) exceeds the maximum number that can be created in the server or cluster. *Action* Delete any unnecessary storage pools and then try again.
KAIC18039-E	The storage pool could not be expanded. The storage pool capacity exceeds the capacity limit (*upper-limit*).	*Cause* The storage pool capacity exceeds the capacity limit (*upper-limit*). *Action* -
KAIC18040-E	The storage pool could not be expanded. The number of volumes (system drives) that are used for the storage pool exceeds the number allowed (*upper-limit*).	*Cause* The number of volumes (system drives) that are used for the storage pool exceeds the number allowed (*upper-limit*). *Action* -
KAIC18041-E	There is no parity group in the selected storage system. Cancel the operation, create a parity group, and then retry the operation.	*Cause* - *Action* Cancel the operation, create a parity group, and then retry the operation.

Message ID	Message Text	Description
KAIC18042-E	Specify parity groups to be used in storage pools for which the following are the same: whether the drive is internal or external, drive type, drive speed, chip type, and RAID level. If you want to allow the mixing of different drive types, select the check box in the "Available Parity Groups" table below. Note that if you allow the mixing of different drive types, it might decrease the performance and reliability of the storage pool.	*Cause* - *Action* -
KAIC18043-W	The allocated paths associated with the volumes and the system drive (*system-drive-id*) that make up the selected storage pool cannot be removed, and the volumes cannot be deleted. The storage pool is using storage system volumes that are not managed by Device Manager. Wait until this task is complete, and then unallocate and delete the volumes associated with the system drives.	*Cause* The storage pool is using storage system volumes that are not managed by Device Manager. *Action* Wait until this task is complete, and then unallocate and delete the volumes associated with the system drives.
KAIC18044-E	Other tasks have already reserved the volumes (*volume-id*) and system drives (*system-drive-id*), which make up the selected storage pool (*storage-pool-name*). Either select another storage pool, or temporarily stop the operation, wait for any registered tasks to finish or cancel them, and then retry the operation.	*Cause* - *Action* Either select another storage pool, or temporarily stop the operation, wait for any registered tasks to finish or cancel them, and then retry the operation.
KAIC18045-W	Deletion of the selected storage pools or unallocation of the volumes that make up the selected storage pools might fail because the selected storage pools include a volume that cannot be deleted. Verify the plan details and try again.	*Cause* - *Action* Verify the plan details and try again.
KAIC18046-W	This volume does not support the shredding function. The volume will be deleted, but shredding will not be performed.	*Cause* - *Action* -
KAIC18047-W	This volume cannot be deleted because the Protect or Read-Only attribute is set in the Data Retention Utility.	*Cause* - *Action*

Message ID	Message Text	Description
		-
KAIC18048-W	This volume cannot be deleted because it is part of a copy pair.	*Cause* - *Action* -
KAIC18049-W	This volume cannot be deleted because it is a command device.	*Cause* - *Action* -
KAIC18050-W	The amount of free capacity on the volumes usable by the selected parity groups is not the same, so of the free capacity allocated to the storage pool, *capacity* (*xx%*) will not be used. You can use all of the free capacity if you select parity groups for which the values of the [Maximum System Drive Capacity] row displayed in the [Available Parity Groups] table is the same.	*Cause* - *Action* You can use all of the free capacity if you select parity groups for which the values of the [Maximum System Drive Capacity] row displayed in the [Available Parity Groups] table is the same.
KAIC18051-W	Storage pool performance might decrease if you select only one parity group for this operation. To maintain performance, select two or more parity groups.	*Cause* - *Action* To maintain performance, select two or more parity groups.
KAIC18052-W	Of the selected parity groups, the parity groups (*parity-groups*) will not be used in the storage pool. Select the parity groups that will not be used, and then click [Release Parity Groups].	*Cause* - *Action* Select the parity groups that will not be used, and then click [**Release Parity Groups**].
KAIC18053-E	The selected parity groups (*parity-groups*) cannot be used. The volumes made from the selected parity groups are already allocated to another host or NAS Platform. Select different parity groups.	*Cause* The volumes made from the selected parity groups are already allocated to another host or NAS Platform. *Action* Select different parity groups.
KAIC18054-W	The selected parity groups contain drives with different characteristics: for example, internal and external drives, different drive types, different drive speeds, different chip types, or different RAID levels. For better performance and reliability select	*Cause* - *Action* For better performance and reliability select parity groups with the same characteristics.

Message ID	Message Text	Description
	parity groups with the same characteristics.	
KAIC18055-E	The volumes (*volumes*) that are in the selected parity groups and that you are trying to use in the storage pool are already reserved. Return to the settings window, and then click [Show Plan]. Alternatively, revise your selection of parity groups.	*Cause* - *Action* Return to the settings window, and then click [**Show Plan**]. Alternatively, revise your selection of parity groups.
KAIC18056-E	Device Manager does not support this operation for tiered storage pools. Use NAS Manager.	*Cause* - *Action* Use NAS Manager.
KAIC18057-E	Device Manager does not support this operation for tiered file systems. Use NAS Manager.	*Cause* - *Action* Use NAS Manager.
KAIC18058-E	The storage pool could not be created or expanded. The number of system drives that can be used in the server or cluster exceeds the maximum (*number-of-system-drives-that-are-recognizable-by-a-server-or-cluster*). Delete unnecessary system drives.	*Cause* The number of system drives that can be used in the server or cluster exceeds the maximum (*number-of-system-drives-that-are-recognizable-by-a-server-or-cluster*). *Action* Delete unnecessary system drives.
KAIC18059-E	There are no storage systems supported by NAS Platform. Add storage systems supported by NAS Platform. For a list of supported storage systems, see the NAS Platform documentation.	*Cause* - *Action* Add storage systems supported by NAS Platform. For a list of supported storage systems, see the NAS Platform documentation.
KAIC18060-W	The recommended path cannot be displayed because at least one node has all of its ports disabled in the file server or cluster. Select the path manually.	*Cause* - *Action* Select the path manually.
KAIC18061-W	The problem might be that the NAS Platform server is unable to recognize the volume because at least one node has no path to an enabled port. Manually enter a path to an enabled port.	*Cause* - *Action* Manually enter a path to an enabled port.

Message ID	Message Text	Description
KAIC18062-W	The path of the volume being allocated has no redundancy. Select the redundant paths manually.	*Cause* - *Action* Select the redundant paths manually.
KAIC18063-W	NAS Platform might behave unexpectedly because the number of paths allocated to NAS Platform per volume is 17 or more. Select the paths manually so that the number of paths per volume is 16 or less.	*Cause* - *Action* Select the paths manually so that the number of paths per volume is 16 or less.
KAIC18064-E	The total capacity of the storage pools in the selected server or cluster exceeds the licensed capacity (*upper-limit*). Register a valid TB license key or license key file. Alternatively, allocate volumes of only the required capacity to the server or cluster, and then use NAS Manager to create or expand the storage pool.	*Cause* - *Action* Register a valid TB license key or license key file. Alternatively, allocate volumes of only the required capacity to the server or cluster, and then use NAS Manager to create or expand the storage pool.
KAIC18066-W	The target storage pool is comprised of the system drives of a storage system that Device Manager does not manage. Because the information about the storage pool capacity and the system drives has errors, the maximum capacity and maximum number of system drives cannot be properly checked. Therefore, this operation might fail.	*Cause* - *Action* -
KAIC18067-E	The selected parity groups (*parity-groups*) cannot be used to create or expand the storage pool. Possible reasons include the following: (1) None of the selected parity groups contains a volume of 5 GB or more. Delete unnecessary volumes, and then create a volume of 5 GB or more. (2) None of the selected parity groups contains unfragmented free space of 5 GB or more. Delete unnecessary volumes. (3) All the volumes in the selected parity groups are in use.	*Cause* - *Action* Possible reasons include the following: 1. None of the selected parity groups contains a volume of 5 GB or more. Delete unnecessary volumes, and then create a volume of 5 GB or more. 2. None of the selected parity groups contains unfragmented free space of 5 GB or more. Delete unnecessary volumes.

Message ID	Message Text	Description
	(4) All the volumes in the selected parity groups have been allocated to another host or NAS Platform. (5) The number of volumes (or system drives) in the target server/cluster exceeds the maximum (*number-of-system-drives*). Delete unnecessary system drives. (6) A volume cannot be created because the usable LDEV IDs of the target storage system have been exhausted.	3. All the volumes in the selected parity groups are in use. 4. All the volumes in the selected parity groups have been allocated to another host or NAS Platform. 5. The number of volumes (or system drives) in the target server/cluster exceeds the maximum (*number-of-system-drives*). Delete unnecessary system drives. 6. A volume cannot be created because the usable LDEV IDs of the target storage system have been exhausted.
KAIC18068-E	The entered file system name (*file-system-name*) cannot be used because the storage pool of *file-server-name-or-cluster-name* is already using it. Enter a different file system name.	*Cause* - *Action* Enter a different file system name.
KAIC18069-E	The entered file system name (*file-system-name*) cannot be used because it is reserved for the storage pool of *file-server-name-or-cluster-name*. Enter a different file system name.	*Cause* - *Action* Enter a different file system name.
KAIC18070-E	A file system cannot be created because the selected storage pool is reserved by a storage pool deletion task. Either select another storage pool or temporarily stop the operation, wait for any registered tasks to finish or cancel them, and then retry the operation.	*Cause* - *Action* Either select another storage pool or temporarily stop the operation, wait for any registered tasks to finish or cancel them, and then retry the operation.
KAIC18071-W	The information about the NAS Platform (*nas-platform-name*) shared with the selected storage pool and its volumes is not up to date. If you continue this operation, the storage pool and system drive information will remain on this NAS Platform. To delete the information, temporarily stop the operation, synchronize the information with the Device Manager server by using NAS Manager, and then retry the operation.	*Cause* - *Action* To delete the information, temporarily stop the operation, synchronize the information with the Device Manager server by using NAS Manager, and then retry the operation.

Message ID	Message Text	Description
KAIC18072-W	The other NAS Platform (*file-server-names-or-cluster-names*) shared with the selected storage pool and its volumes has a storage pool (*storage-pool-names*) that is already reserved by other tasks. If you continue this operation, the storage pool and system drive information will remain on *file-server-names-or-cluster-names*. To delete the information, temporarily stop the operation, cancel any registered tasks or wait for them to finish, and then retry the operation.	*Cause* - *Action* To delete the information, temporarily stop the operation, cancel any registered tasks or wait for them to finish, and then retry the operation.
KAIC18074-W	The volumes (*volume-ids*) (system drives: *system-drive-ids*) associated with the selected storage pool (*storage-pool-names*) are shared with other servers or clusters (*file-server-names-or-cluster-names*). This task will delete not only the selected storage pools, but also the storage pools in the related servers or clusters, and the shared volumes (system drives).	*Cause* - *Action* -
KAIC18075-W	An authentication error occurred during communication with Admin Services on the other file server (*file-server-names*) shared with the selected storage pool and its volumes. If you continue this operation, the storage pool and system drive information will remain on this file server. To delete the information, in the Edit File Server window, revise the user ID and password settings for Admin Services, and then retry the operation.	*Cause* - *Action* To delete the information, in the Edit File Server window, revise the user ID and password settings for Admin Services, and then retry the operation.
KAIC18076-W	An error occurred during communication with Admin Services on the other file server (*file-server-names*) shared with the selected storage pool and its volumes. If you continue this operation, the storage pool and system drive information will remain on this file server. To delete the information, in the Edit File Server window, revise the Admin Services settings, and then retry the operation.	*Cause* - *Action* To delete the information, in the Edit File Server window, revise the Admin Services settings, and then retry the operation.

Message ID	Message Text	Description
KAIC18077-W	The information about the other NAS Platform (*nas-platform-names*) shared with the selected storage pool and its volumes could not be obtained. If you continue this operation, the storage pool and system drive information will remain on this NAS Platform. To delete the information, synchronize the information with the Device Manager server by executing a synchronize operation in NAS Manager, and then retry the operation.	*Cause* - *Action* To delete the information, synchronize the information with the Device Manager server by executing a synchronize operation in NAS Manager, and then retry the operation.
KAIC18078-W	The version information related to the other NAS Platform (*nas-platform-names*) shared with the selected storage pool and its volumes could not be obtained. If you continue this operation, the storage pool and system drive information will remain on this NAS Platform. To delete the information, synchronize the information with the Device Manager server by executing a synchronize operation in NAS Manager, and then retry the operation.	*Cause* - *Action* To delete the information, synchronize the information with the Device Manager server by executing a synchronize operation in NAS Manager, and then retry the operation.
KAIC18079-W	The NAS Manager version is older than the firmware versions of the other NAS Platforms (*nas-platform-names*) shared with the selected storage pool and its volumes. If you continue this operation, the storage pool and system drive information will remain on this NAS Platform. To delete the information, make the firmware versions the same as that of NAS Manager, or update the NAS Manager version, and then retry the operation.	*Cause* - *Action* To delete the information, make the firmware versions the same as that of NAS Manager, or update the NAS Manager version, and then retry the operation.
KAIC18080-W	This operation cannot be executed because the NAS Platforms in the specified cluster (*cluster-names*) shared with the selected storage pool and its volumes have different firmware versions. If you continue this operation, the storage pool and system drive information will remain on this cluster. To delete the information, make the firmware versions of the NAS Platforms in the cluster the same,	*Cause* - *Action* To delete the information, make the firmware versions of the NAS Platforms in the cluster the same, synchronize the information with Device Manager server by using NAS Manager, and then retry the operation.

Message ID	Message Text	Description
	synchronize the information with Device Manager server by using NAS Manager, and then retry the operation.	
KAIC18081-W	The firmware version of the server or cluster (*file-server-or-cluster-names*) shared with the selected storage pool and its volumes does not support this operation. If you continue this operation, the storage pool and system drive information will remain on this server or cluster. To delete the information, update the server or cluster to the latest version of the firmware, synchronize the information with the Device Manager server by using NAS Manager, and then retry the operation.	*Cause* - *Action* To delete the information, update the server or cluster to the latest version of the firmware, synchronize the information with the Device Manager server by using NAS Manager, and then retry the operation.
KAIC18082-E	The storage pool was successfully deleted, but some of the resources that make up the storage pool could not be deleted. Open the task details dialog box and verify the contents of the error message. If you want to delete the resources that could not be deleted, delete them manually in NAS Manager or Device Manager.	*Cause* - *Action* Open the task details dialog box and verify the contents of the error message. If you want to delete the resources that could not be deleted, delete them manually in NAS Manager or Device Manager.
KAIC18083-E	The specified operation cannot be executed because the status of the selected storage pool (*storage-pool-names*) is "Not Healthy". The status of the system drives that make up the storage pool might be incorrect. Change the status of the selected storage pool to a usable state, and then synchronize the information with the Device Manager server by executing a synchronize operation in NAS Manager. After that, retry the operation.	*Cause* The status of the system drives that make up the storage pool might be incorrect. *Action* Change the status of the selected storage pool to a usable state, and then synchronize the information with the Device Manager server by executing a synchronize operation in NAS Manager. After that, retry the operation.
KAIC18084-E	This operation cannot be performed because the status of the storage pool (*storage-pool-name*) is "Pool belongs to another cluster". *solution*	*Cause* - *Action* *solution*

KAIC18825-E	No valid license was found. Register a valid license key.	*Cause* - *Action* Register a valid license key.

Message ID	Message Text	Description
KAIC18828-E	The task cannot be performed because a storage system for the operation was not found. Check the status of the storage system.	*Cause* - *Action* Check the status of the storage system.
KAIC18829-W	The target storage port (*port*) is being used by both the LUN path and the external path. For this reason, during data migration, the I/O load on the port might increase and degrade performance. We recommend using different target storage ports for the LUN path and the external path.	*Cause* - *Action* We recommend using different target storage ports for the LUN path and the external path.
KAIC18830-E	A volume with the specified capacity could not be created because Accelerated Compression is enabled for the associated parity group, "*parity-group-names*". Specify the capacity in the range from *minimum-capacity* to *maximum-capacity*, or specify a different parity group.	*Cause* - *Action* Specify the capacity in the range from *minimum-capacity* to *maximum-capacity*, or specify a different parity group.
KAIC18831-I	Because Accelerated Compression is enabled in the parity group, "*parity-group-names*", a quick format could not be performed for the volume to be created in that parity group. Instead, a normal format will be performed.	*Cause* - *Action* -
KAIC18832-E	A volume could not be allocated because Accelerated Compression is enabled for the selected parity group, "*parity-group-names*". Select a different parity group.	*Cause* - *Action* Select a different parity group.
KAIC18833-E	The selected volume, "*ldev-ids*", could not be allocated because Accelerated Compression is enabled for the volume's associated parity group, "*parity-group-names*". Select a volume that is in a different parity group.	*Cause* - *Action* Select a volume that is in a different parity group.
KAIC18834-W	Accelerated Compression is enabled for the selected parity groups(*parity-group-names*). If the saving rate is known or can be predicted, you can use pool volumes in addition to the physical capacity of the parity group.	*Cause* - *Action* For details, see the Provisioning Guide for Open Systems or the Provisioning Guide.

Message ID	Message Text	Description
	If the saving rate is unknown or cannot be predicted, use pool volumes that are equivalent to the size of the physical capacity of the parity group. For details, see the Provisioning Guide for Open Systems or the Provisioning Guide.	
KAIC18835-W	No available physical capacity exists for the selected parity group (*parity-group-names*). Either create free space that is equivalent to the physical capacity for the selected parity group, or select a volume that is in a different parity group.	*Cause* - *Action* Either create free space that is equivalent to the physical capacity for the selected parity group, or select a volume that is in a different parity group.
KAIC18836-E	The selected parity groups, "*parity-group-names*", cannot be used. Accelerated Compression is enabled and another pool is being used. Select a different parity group.	*Cause* Accelerated Compression is enabled and another pool is being used. *Action* Select a different parity group.
KAIC18837-E	The selected volumes, "*ldev-ids*", cannot be used. The selected volume belongs to the parity group, "*parity-group-names*", for which Accelerated Compression is enabled. Also, another pool uses the same parity group. Select a volume that is in a different parity group.	*Cause* The selected volume belongs to the parity group, "*parity-group-names*", for which Accelerated Compression is enabled. Also, another pool uses the same parity group. *Action* Select a volume that is in a different parity group.
KAIC18838-I	When a volume in a pool is configured from parity groups for which Accelerated Compression is enabled, full volume allocation will be disabled. (volume = *ldev-ids*)	*Cause* - *Action* -
KAIC18839-I	When a volume in a pool is configured from parity groups for which Accelerated Compression is enabled, full volume allocation will be disabled. (pool = *pool-id*)	*Cause* - *Action* -
KAIC18840-E	Data could not be shredded for a volume in a parity group because Accelerated Compression is enabled for the parity group.	*Cause* - *Action* -
KAIC18841-E	The task could not be completed because the pair status of GAD is not "PAIR". A problem might have	*Cause* A problem might have occurred on a quorum disk or remote path.

Message ID	Message Text	Description
	occurred on a quorum disk or remote path. Refer to the Replication Manager manual for information about resolving the issue.	*Action* Refer to the Replication Manager manual for information about resolving the issue.
KAIC18842-E	Failed to restart the task. The LDEV ID (*ldev-id*) to be added is already used by a resource group on the target storage system. Cancel the operation, and then run [Virtualize and Allocate Volumes] again. To use the same LDEV ID, release the used LDEV ID by deleting it from the resource group, and then try again.	*Cause* The LDEV ID (*ldev-id*) to be added is already used by a resource group on the target storage system. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again. To use the same LDEV ID, release the used LDEV ID by deleting it from the resource group, and then try again.
KAIC18843-E	Failed to restart the task. The host group number (*hostgroupno*) to be added is already used by a resource group on the target storage system. Cancel the operation, and then run [Virtualize and Allocate Volumes] again. To use the same host group number, release the used host group number by deleting it from the resource group, and then try again.	*Cause* The host group number (*hostgroupno*) to be added is already used by a resource group on the target storage system. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again. To use the same host group number, release the used host group number by deleting it from the resource group, and then try again.
KAIC18844-E	Failed to restart the task. The LUN (*lun*) to be used in [External Path Settings] is already used by the source storage system. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The LUN (*lun*) to be used in [External Path Settings] is already used by the source storage system. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18845-E	Failed to restart the task. The LUN (*lun*) to be used in [External Path Settings] is already reserved by another task. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The LUN (*lun*) to be used in [External Path Settings] is already reserved by another task. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18846-E	Failed to restart the task. A source volume (*source-volume*) LDEV ID is already assigned as a virtual ID	*Cause*

Message ID	Message Text	Description
	to a volume in the target storage system. Cancel the operation, remove the virtual IDs from the volumes in the target storage system, and then run [Virtualize and Allocate Volumes] again.	A source volume (*source-volume*) LDEV ID is already assigned as a virtual ID to a volume in the target storage system. *Action* Cancel the operation, remove the virtual IDs from the volumes in the target storage system, and then run [Virtualize and Allocate Volumes] again.
KAIC18848-E	Failed to restart the task. The source volume (*source-volume*) is already virtualized in the target storage system. Cancel the operation, unvirtualize the volume for the source volume, and then run [Virtualize and Allocate Volumes] again.	*Cause* The source volume (*source-volume*) is already virtualized in the target storage system. *Action* Cancel the operation, unvirtualize the volume for the source volume, and then run [Virtualize and Allocate Volumes] again.
KAIC18849-E	Failed to restart the task. The LDEV ID (*ldev-id*) to be used in [Virtualize Source Volumes] is already used by the target storage system. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The LDEV ID (*ldev-id*) to be used in [Virtualize Source Volumes] is already used by the target storage system. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18850-E	Failed to restart the task. The parity group name (*parity-group-name*) to be used in [Virtualize Source Volumes] is already used by the target storage system. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The parity group name (*parity-group-name*) to be used in [Virtualize Source Volumes] is already used by the target storage system. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18851-E	Failed to restart the task. The host group number (*hostgroupno*) to be used in [Allocate Target Volumes] is already used by the target storage system. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The host group number (*hostgroupno*) to be used in [Allocate Target Volumes] is already used by the target storage system. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.

Message ID	Message Text	Description
KAIC18852-E	Failed to restart the task. The host group number (*hostgroupno*) to be used in [Allocate Target Volumes] is already reserved by another task. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The host group number (*hostgroupno*) to be used in [Allocate Target Volumes] is already reserved by another task. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18853-E	Failed to restart the task. The host group name (*hostgroupname*) to be used in [Allocate Target Volumes] is already used by the target storage system. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The host group name (*hostgroupname*) to be used in [Allocate Target Volumes] is already used by the target storage system. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18854-E	Failed to restart the task. The host group name (*hostgroupname*) to be used in [Allocate Target Volumes] is already reserved by another task. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The host group name (*hostgroupname*) to be used in [Allocate Target Volumes] is already reserved by another task. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18855-E	Failed to restart the task. The WWN (*wwn*) to be added to host group of port (*port*) in [Allocate Target Volumes] is already added to another host group of the same port. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The WWN (*wwn*) to be added to host group of port (*port*) in [Allocate Target Volumes] is already added to another host group of the same port. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18856-E	Failed to restart the task. The LUN (*lun*) to be used in [Allocate Target Volumes] is already used by the target storage system. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The LUN (*lun*) to be used in [Allocate Target Volumes] is already used by the target storage system. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.

Message ID	Message Text	Description
KAIC18857-E	Failed to restart the task. The LUN (*lun*) to be used in [Allocate Target Volumes] is already reserved by another task. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The LUN (*lun*) to be used in [Allocate Target Volumes] is already reserved by another task. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18858-E	The task status could not be changed. Now that the process for this step is complete, manually change the job status to [Completed (Manually recover)], and then continue to the next step.	*Cause* - *Action* Now that the process for this step is complete, manually change the job status to [Completed (Manually recover)], and then continue to the next step.
KAIC18859-E	Failed to restart the task. The host group number (*hostgroupno*) to be used in [Allocate Target Volumes] is already used by another host group. Cancel the operation, and then run [Virtualize and Allocate Volumes] again.	*Cause* The host group number (*hostgroupno*) to be used in [Allocate Target Volumes] is already used by another host group. *Action* Cancel the operation, and then run [Virtualize and Allocate Volumes] again.
KAIC18860-E	Failed to restart the task. Among the host groups that were created in [Allocate Target Volumes], at least one host group was not created. Check the troubleshooting information for Nondisruptive Migration User Guide, and then complete the recommended procedure.	*Cause* Among the host groups that were created in [Allocate Target Volumes], at least one host group was not created. *Action* Check the troubleshooting information for Nondisruptive Migration User Guide, and then complete the recommended procedure.
KAIC18861-E	Failed to restart the task. Among the LUNs that were added to [Allocate Target Volumes], at least one LUN was not created. Check the troubleshooting information for Nondisruptive Migration User Guide, and then complete the recommended procedure.	*Cause* Among the LUNs that were added to [Allocate Target Volumes], at least one LUN was not created. *Action* Check the troubleshooting information for Nondisruptive Migration User Guide, and then complete the recommended procedure.

Message ID	Message Text	Description
KAIC18862-E	Failed to restart the task. Among the WWNs that were added to [Allocate Target Volumes], at least one WWN was not created. Check the troubleshooting information for Nondisruptive Migration User Guide, and then complete the recommended procedure.	*Cause* Among the WWNs that were added to [Allocate Target Volumes], at least one WWN was not created. *Action* Check the troubleshooting information for Nondisruptive Migration User Guide, and then complete the recommended procedure.
KAIC18863-E	The task cannot be performed. Check the [Message] column in the [Task Status Detail] table, follow the provided instructions, and then restart the task. If you cannot restart the task, check the troubleshooting information for Nondisruptive Migration User Guide, and complete the recommended procedure.	*Cause* - *Action* Check the [**Message**] column in the [**Task Status Detail**] table, follow the provided instructions, and then restart the task. If you cannot restart the task, check the troubleshooting information for Nondisruptive Migration User Guide, and complete the recommended procedure.
KAIC18864-W	Either the NAS Platform information cannot be acquired or it is not current. Within the task details, check the status of the data collection task and any message.	*Cause* - *Action* Within the task details, check the status of the data collection task and any message.
KAIC18865-W	No Admin Services information is registered. Confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System].	*Cause* - *Action* Confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System].
KAIC18866-W	An authentication error occurred during communication with Admin Services. Confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System].	*Cause* - *Action* Confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System].

Message ID	Message Text	Description
KAIC18867-E	An authentication error occurred during communication with Admin Services of the NAS Platform. Confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System], and then try again.	*Cause* - *Action* Confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System], and then try again.
KAIC18868-E	Communication with Admin Services of the NAS Platform failed. Confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System], and then try again.	*Cause* - *Action* Confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System], and then try again.
KAIC18869-W	An authentication error occurred during communication with Admin Services on the other NAS Platform (*nas-platform-names*) shared with the selected storage pool and its volumes. If you continue this operation, the storage pool and system drive information will remain on this NAS Platform. Before deleting the information, confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System], and try again.	*Cause* - *Action* Before deleting the information, confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System], and try again.
KAIC18870-W	An error occurred during communication with Admin Services on the other NAS Platform (*nas-platform-names*) shared with the selected storage pool and its volumes. If you continue this operation, the storage pool and system drive information will remain on this NAS Platform. Before deleting the information, confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System], and try again.	*Cause* - *Action* Before deleting the information, confirm that the account that was used to add the storage system is registered in NAS Manager. If necessary, change the account settings by using [Edit Storage System], and try again.

Message ID	Message Text	Description
KAIC18871-E	An attempt to connect to Admin Services failed. Check the network connection environment for the storage systems and NAS Platforms. If the problem persists, detailed investigation is required to determine the cause and to resolve the problem. Contact the support center, who may ask you to collect troubleshooting information.	*Cause* - *Action* Check the network connection environment for the storage systems and NAS Platforms. If the problem persists, detailed investigation is required to determine the cause and to resolve the problem. Contact the support center, who may ask you to collect troubleshooting information.
KAIC18873-E	This operation cannot be performed from Hitachi Command Suite, because the NAS modules are in a cluster configuration and global-active device pairs are present. Complete the task from Device Manager - Storage Navigator or NAS Manager.	*Cause* - *Action* Complete the task from Device Manager - Storage Navigator or NAS Manager.

KAIC20000 - KAIC29999

This section describes messages KAIC20000 to KAIC29999, which are related to Device Manager agent. Unless stated otherwise, *server* refers to the Hitachi Command Suite management server.

Table 2-11 KAIC20000 - KAIC29999 (messages related to Device Manager agent)

Message ID	Message Text	Description
KAIC22001-E	This usage is incorrect: *explanation summary of correct usage*	*Cause* An attempt was made to execute `HiScan` with invalid parameters. *Action* Execute `HiScan` with the correct parameters.
KAIC22002-E	DoScan: *DoScan_Message*	*Cause* An error occurred while executing the `HiScan` command. *Action* Respond as indicated in the message following DoScan:.
KAIC22003-E	DoScan: Disk drive not found on this host	*Cause* An error occurred while executing the `HiScan` command.

Message ID	Message Text	Description
		Action Ensure that all Hitachi or Sun disks are online.
KAIC22004-E	DoEmit: *DoEmit_Message*	*Cause* An error occurred while executing the `HiScan` command. *Action* Respond as indicated in the message following DoEmit:.
KAIC22005-E	The output file could not be opened.(*Exception information*)	*Cause* An attempt to create a log file that was specified with the `-t` parameter has failed. *Action* Ensure that the path used in the `-t` parameter exists, the filename is valid for this operating system, and that there is sufficient space on the disk.
KAIC22006-E	The IPAddress [*IPAddress*] could not be resolved.	*Cause* The host name of the Device Manager server specified with the `-s` parameter could not be resolved to an IP address. *Action* Check and, if necessary, revise the host name of the Device Manager server specified with the `-s` parameter.
KAIC22007-E	The server socket could not be opened. (*Exception information*)	*Cause* An attempt to communicate with the Device Manager server has failed. *Action* Make sure that the Windows OS and TCP/IP protocol stack are correctly installed.
KAIC22008-E	A connection could not be established.	*Cause* An attempt to communicate with the Device Manager server has failed. *Action* Make sure that the `-s` parameter is specified correctly (both the server address and port number are correct), and the specified Device Manager server is active.
KAIC22009-E	An HTTP/XML message could not be sent. (*Exception information*,Content-Length=*Transmission length*)	*Cause* An attempt to communicate with the Device Manager server has failed. *Action*

Message ID	Message Text	Description
		Make sure that the network connection is operating reliably. Make sure that the `server.http.entity.maxLength` property in the `server.properties` file of the Device Manager server is larger than Content-Length.
KAIC22010-E	The server response could not be received. (*Exception information*,Content-Length=*Transmission length*)	*Cause* There was no response from the Device Manager server. The Device Manager server is probably not working correctly. *Action* Make sure that the value of the `-s` parameter indicates a Device Manager server, and not another network server type. Make sure that the network connection is operating reliably. Make sure that the `server.http.entity.maxLength` property in the `server.properties` file of the Device Manager server is larger than Content-Length.
KAIC22011-E	A connection to the Device Manager server was established, but no response was detected. (*Exception information*,Content-Length=*Transmission length*)	*Cause* There was no response from the Device Manager server. The Device Manager server is probably not working correctly. *Action* Make sure that the value of the `-s` parameter indicates a Device Manager server, and not another network server type. Make sure that the network connection is operating reliably. Make sure that the `server.http.entity.maxLength` property in the `server.properties` file of the Device Manager server is larger than Content-Length.
KAIC22012-E	The correct response header could not be acquired: HTTP/1.0. Received:(*Received contents*)	*Cause* The Device Manager server is probably not working correctly. *Action* Make sure that the value of IPAddress of the Device Manager server specified in the `-s` parameter or `server.server.serverIPAddress` property of Device Manager agent is

Message ID	Message Text	Description
		correct, the port of the Device Manager server specified in the `-s` parameter or `server.server.serverPort` property of Device Manager agent is correct (make sure the port matches the `server.server.serverPort` property of the Device Manager server), the Device Manager server works normally, and that communication with the Device Manager server is possible.
KAIC22013-E	The status code of the HTTP response is not "OK": (*Response contents*)	*Cause* An attempt to communicate with the Device Manager server has failed. *Action* The *details* portion of this message should indicate the nature of the problem. This kind of condition may be due to an invalid combination of `-u` *userid* and `-p` *password* parameters.
KAIC22014-E	HiScan could not connect to Device Manager server because of a connection timeout.	*Cause* Communication with the Device Manager server terminated because of a timeout monitored by Device Manager agent. *Action* Check and, if necessary, revise the value of `server.http.server.timeOut` in the `server.properties` file of the Device Manager agent. Make sure that the `server.http.entity.maxLength` property in the `server.properties` file of the Device Manager server is larger than Content-Length.
KAIC22018-E	Information about the installed plugin could not be acquired. (*Exception information*)	*Cause* The installation status is incorrect. *Action* The installation of Device Manager agent or Dynamic Link Manager may have terminated abnormally.
KAIC22019-E	The "hldutil" response timeout.	*Cause* An abnormal situation may have occurred during execution of the `hldutil` command, or a timeout may have occurred in the `hldutil` command due to an excessive number of LUs. *Action*

Message ID	Message Text	Description
		Make sure that the host is detecting LUs correctly. If necessary, revise the value of `server.util.processTimeOut` property in the `server.properties` file of the Device Manager agent.
KAIC22020-E	The executable program "hldutil" does not exist. (*Exception information*)	*Cause* An attempt to execute the `hldutil` command has failed. *Action* To determine the cause and resolve the problem, detailed investigation is required. Contact Support Center, who may ask you to collect troubleshooting information.
KAIC22047-E	An attempt to authenticate a user ID and password has failed. : *status code*	*Cause* The specified user ID and password are invalid. *Action* Execute `hdvmagt_setting`, and then enter the correct user ID and password.
KAIC22048-E	The data in the request was rejected because the data is too large. : *status code*	*Cause* The Device Manager server's processing capacity was exceeded because the data in the request is too large. *Action* Make sure that the `server.http.entity.maxLength` property in the `server.properties` file of the Device Manager server is larger than Content-Length.
KAIC22049-E	The value of an argument in the specified option is invalid. :*option*	*Cause* The character that cannot be used for the argument of the option is specified. *Action* Specify the character string that can be used for the argument of the option.
KAIC22050-E	A site-local address or link-local address cannot be specified. (*address*)	*Cause* A site-local address or link-local address is specified in an option. *Action* To use IPv6 addresses, you must specify a global address.

Message ID	Message Text	Description
KAIC22051-E	The host name of the host could not be resolved to an IP address.	*Cause* The value set for `server.http.socket.agentAddress` in the `server.properties` file of the Device Manager agent might be incorrect, or the host environment might be invalid. *Action* Check, and if necessary, revise the value set for `server.http.socket.agentAddress` in the `server.properties` file of the Device Manager agent.
KAIC22052-E	An error occurred while SSL communication was being set up.	*Cause* The procedure to set up SSL communication of Device Manager agent might not have been performed properly. *Action* Verify the procedure to set up SSL communication of the Device Manager agent. If this does not solve the problem, collect maintenance information, and then contact customer support.
KAIC22053-E	An SSL communication error occurred.	*Cause* An SSL communication error occurred for either of the following reasons: • The port number is not for SSL communication. • The truststore file on the Device Manager Agent and at the connection destination are different. • The truststore file is no longer valid. • The cipher suite differ by the Device Manager Agent and at the connection destination. *Action* Check the value of `server.server.serverPort` in the `server.properties` file, or check the value specified for the port number for the HDVM server. Check the contents of the truststore file. Check whether the cipher suite specified by the connection destination

Message ID	Message Text	Description
		can use it by Java currently used by the Device Manager Agent. If this does not solve the problem, collect maintenance information, and then contact the Support Center.
KAIC22054-E	An unexpected error occurred. Collect maintenance information, and then contact the Support Center.	*Cause* An unexpected error occurred. *Action* Collect maintenance information, and then contact the Support Center.
KAIC22401-W	The command prompt was not started by the administrator. Although processing is executing properly, the started command prompt will be closed after processing ends.	*Cause* The command was executed by a user other than the administrator. *Action* Execute this command as the administrator.
KAIC25111-W	*(Windows)* The Device Manager agent installation has been suspended due to requests received from a management server. Please wait a moment and then click Retry to attempt the installation again, or click Cancel to end the Device Manager agent installation. *(UNIX)* The Device Manager agent installation has been suspended due to requests received from a management server. Please wait a moment and enter (Y)es to attempt the installation again or enter (N)o to end the Device Manager agent installation.	*Cause* The installation was canceled because the Device Manager agent was being accessed from outside. *Action* Wait a while, and then retry the installation. If you want to immediately stop the Device Manager agent, see the explanation of the `hbsasrv` command in the Device Manager agent manual.
KAIC25112-W	*(Windows)* The Device Manager agent installation has been suspended due to the execution of the one of the following commands: (hbsasrv, hdvmagt_setting, TIC, hldutil). Please wait a moment and then click Retry to attempt the	*Cause* The installation was canceled because the Device Manager agent command is executing. *Action* Wait a while, and then retry the installation.

Message ID	Message Text	Description
	installation again, or click Cancel to end the Device Manager agent installation. *(UNIX)* The Device Manager agent installation has been suspended due to the execution of the one of the following commands: (hbsasrv, hdvmagt_setting, TIC, hldutil). Please wait a moment and enter (Y)es to attempt the installation again or enter (N)o to end the Device Manager agent installation.	
KAIC25113-W	*(Windows)* The Device Manager agent installation has been suspended because the HiScan command is executing. Please wait a moment and click Retry to attempt the installation again, or click Cancel to end the Device Manager agent installation. *(UNIX)* The Device Manager agent installation has been suspended because the HiScan command is executing. Please wait a moment and enter (Y)es to attempt the installation again or enter (N)o to end the Device Manager agent installation.	*Cause* The installation was canceled because the `HiScan` command is executing. *Action* Wait a while, and then retry the installation.
KAIC25115-W	*(Windows)* The Device Manager agent removal has been suspended due to requests received from a management server. Please wait a moment and then click Retry to attempt the removal again, or click Cancel to end the Device Manager agent removal. *(UNIX)* The Device Manager agent removal has been suspended due to requests received from a management server.	*Cause* The removal was canceled because the Device Manager agent was being accessed from outside. *Action* Wait a while, and then retry the removal. If you want to immediately stop the Device Manager agent, see the explanation of the `hbsasrv` command in the Device Manager agent manual.

Message ID	Message Text	Description
	Please wait a moment and enter (Y)es to attempt the removal again or enter (N)o to end the Device Manager agent removal.	
KAIC25116-W	*(Windows)* The Device Manager agent removal has been suspended because one of the following commands is executing: (hbsasrv, hdvmagt_setting, TIC, hldutil) Please wait a moment and then click Retry to attempt the removal again, or click Cancel to end the Device Manager agent removal. *(UNIX)* The Device Manager agent removal has been suspended because one of the following commands is executing: (hbsasrv, hdvmagt_setting, TIC, hldutil) Please wait a moment and enter (Y)es to attempt the removal again or enter (N)o to end the Device Manager agent removal.	*Cause* The removal was canceled because the Device Manager agent command is executing. *Action* Wait a while, and then retry the removal.
KAIC25117-W	*(Windows)* The Device Manager agent removal has been suspended because the HiScan command is executing. Please wait a moment and then click Retry to attempt the removal again, or click Cancel to end the Device Manager agent removal. *(UNIX)* The Device Manager agent removal has been suspended because the HiScan command is executing. Please wait a moment and enter (Y)es to attempt the removal again or enter (N)o to end the Device Manager agent removal.	*Cause* The removal was canceled because the `HiScan` command is executing. *Action* Wait a while, and then retry the removal.

Message ID	Message Text	Description
KAIC25120-W	User account authentication has failed. Revise the user account information.	*Cause* Possible causes are as follows: • The specified user account (user ID) does not exist. • The password for the user account was specified incorrectly. *Action* Check the following points, and then click the [**Next**] button in the Setting Up the Agent Service Account window: • Make sure that the specified user account exists. • Make sure that the password for the user account is specified correctly.
KAIC25121-W	The specified user account does not have Administrators permissions. Revise the user account information.	*Cause* The specified user account does not have Administrators permissions. *Action* Make sure that the user performing the installation has Administrators permissions, and then click the [**Next**] button in the Setting Up the Agent Service Account window.
KAIC25122-W	The specified user account does not have the User Rights Assignment setting "Log on as a service". Make sure the user account has this setting.	*Cause* The User Rights Assignment setting "Log on as a service" has not been specified for the specified user account. *Action* Make sure that the User Rights Assignment setting "Log on as a service" has been specified for the user performing the installation, and then again click the [**Next**] button in the Setting Up the Agent Service Account window.
KAIC25123-W	An error occurred during setup of the agent service account.	*Cause* An unexpected error occurred during user account authentication. *Action* In the Setting Up the Agent Service Account window, click the [**Next**] button again. If you cannot resolve the problem, do not set up the agent service account (select [**NO**] in the Setting Up the Agent Service Account window), and

Message ID	Message Text	Description
		then click the [**Next**] button in that window. After the installation, open the Services window from [**Administrative Tools**], and then change the account for [**HBsA Service**].
KAIC25126-W	Installation of the Device Manager agent was successfully completed, but the setup of the RAID Manager failed. Make sure that RAID Manager or XP7 RAID Manager XP has been installed, and then execute the hdvmagt_setting command to set up the Device Manager agent.	*Cause* Setup of RAID Manager failed. *Action* Use the `hdvmagt_setting` command to set up RAID Manager.
KAIC25156-E	Installation FAILED. Please execute setup.exe to install Device Manager agent.	*Cause* Installation failed. *Action* Install Device Manager agent to execute the `setup.exe`.
KAIC25157-E	There is not enough free disk space for installation. Make sure that there is enough free space on the system drive and installation drive. Installation will now stop.	*Cause* There is not enough free disk space for installation. Make sure that there is enough free space on the system drive and installation drive. *Action* Make sure that there is enough free space, and then try installing again.
KAIC25163-E	A newer version of Device Manager agent is already installed on this system. You cannot downgrade Device Manager agent.	*Cause* An attempt was made to install an old version of the Device Manager agent in an environment containing a newer version. *Action* No additional action is required.
KAIC25172-E	Installation or removal was stopped because an error occurred in the JVM.	*Cause* A prerequisite patch might not have been applied. Alternatively, if you are using UNIX, the Java information in the properties file used by the Device Manager agent might not be valid. *Action* • Make sure that all prerequisite patches have been applied. For details on the prerequisite

Message ID	Message Text	Description
		patches, see the Device Manager agent manual. • If you are using UNIX, make sure the Java information specified in the properties file used by the Device Manager agent is valid. If the Java information is invalid, specify the correct Java information in the properties file, and then reinstall the Device Manager agent. For details on the properties file, see the Device Manager agent manual.
KAIC25173-E	Program aborted. Wait a while, and restart this procedure.	*Cause* The installation or removal was executed while the Device Manager agent was running. *Action* Wait a while, and then re-execute.
KAIC25174-E	This environment is a non-global zone. Installation in a non-global zone is not supported.	*Cause* Installation was attempted in a zone other than the global zone. *Action* Please execute the installation in a global zone.
KAIC25176-E	An unexpected error occurred during setup processing of the Device Manager agent.	*Cause* The setup program could not be executed. *Action* Collect maintenance information, and then contact the Support Center.
KAIC25177-E	An illegal option is specified. *specified option*	*Cause* An invalid option is specified in the installation command or removal command. *Action* Check the syntax, specify the option correctly, and then execute the installation command or removal command again.
KAIC25178-E	The mistake is found in the number of arguments. *specified number*	*Cause* The number of arguments in the installation command or removal command is invalid. *Action* Check the syntax, specify the arguments correctly, and then execute

Message ID	Message Text	Description
		the installation command or removal command again.
KAIC25179-E	The installation path of the Device Manager agent cannot be acquired.	*Cause* An attempt to acquire the installation path of the Device Manager agent has failed. *Action* Collect maintenance information, and then contact the Support Center.
KAIC25181-E	It failed in the installation of Protection Manager.	*Cause* An attempt to copy the Protection Manager files has failed. *Action* Execute `hptmguiinst.exe` or `hptmguiinst.sh`, and then take action based on the output error message.
KAIC25183-E	The user is not the root user.	*Cause* The user who performed the installation is not the root user. *Action* Perform the installation as the root user.
KAIC25184-E	A file required for installation of the Device Manager agent is missing.	*Cause* A file required for the installation is missing. *Action* The installation media might be corrupted. Try installing the software again, using different installation media.
KAIC25185-E	No usable JDK or JRE exists. Install a JDK or JRE, and then retry the operation.	*Cause* No prerequisite Java version is installed in the system. *Action* Install a prerequisite Java version, and then retry the operation.
KAIC25186-E	Your user group permissions are not Administrators permissions.	*Cause* Your user group permissions are not Administrators permissions. *Action* Perform installation as a user who has Administrators permissions.
KAIC25188-E	A fatal error occurred during the installation of the Device Manager agent.	*Cause* Possible causes are as follows:

Message ID	Message Text	Description
	Installation will now stop.	• Installation files of the Device Manager agent could not be copied to a working directory. • Installation files of the Device Manager agent could not be deleted from a working directory. *Action* Collect maintenance information, and then contact the Support Center.
KAIC25189-E	Installation of the Device Manager agent has FAILED.	*Cause* Installation of the Device Manager agent has failed. Possible causes include the following: • Installation information of a past Device Manager agent or of a past Dynamic Link Manager still remains. • There is not enough space at the specified installation destination. • Your user group permissions are not Administrators permissions. • An attempt was made to install on an unsupported OS. *Action* Check the following and, if necessary, carry out the recommended action. Then try to install the Device Manager agent again. • HBase Agent is displayed twice in the Add or Remove Programs window on a computer where the Device Manager agent or Dynamic Link Manager is installed. Alternatively, HBase Agent is displayed in the Add or Remove Programs window on a computer where both the Device Manager agent and Dynamic Link Manager have been removed. In either of the above cases, execute the `hbsa_util`command, and then delete the Device Manager agent registry and files. For details on this command, see the *Hitachi Command Suite Administrator Guide.* • Make sure that there is enough free space on the disk where the Device Manager agent is to be installed. • Perform installation as a user who has Administrators permissions.

Message ID	Message Text	Description
		• The OS version and CPU which are supported (Refer to the Release Notes).
KAIC25190-E	Installation of the Device Manager agent was completed, but the setup of the Device Manager agent or a related program has FAILED. If you want to use the related program for which setup did not finish, reinstall the Device Manager agent. If you will not use the related program for which setup did not finish, no additional action is required.	*Cause* Possible causes are as follows: • Setup of the Device Manager agent failed. • Setup of the Protection Manager linkage function failed. • Setup of the Dynamic Link Manager linkage function failed. • Setup of the account information for the Device Manager agent service (HBsA Service) failed. • Installation of the Global Link Manager agent failed. *Action* If you want to use the related program for which setup did not finish, reinstall the Device Manager agent. If you will not use the related program for which setup did not finish, no additional action is required.
KAIC25193-E	The execute permission for the installation files could not be changed.	*Cause* The execute permission for the installation files could not be changed. *Action* Put the installation files into a directory that can be written to.
KAIC25194-E	An attempt to open the '*HDVMAgent_conf file name*' file has FAILED.	*Cause* An attempt to open the '*HDVMAgent_conf file name*' file has failed. *Action* The `HDVMAgent.conf` file was not found in the directory that contains the installer. Make sure that the file is there, and then try to install the Device Manager Agent again.
KAIC25197-E	The format of line %d in the '*HDVMAgent_conf file name*' is invalid.	*Cause* The format of the `HDVMAgent.conf` file is invalid. *Action* The `HDVMAgent.conf` file might be corrupted. Check the file, and then try to install the Device Manager Agent again.

Message ID	Message Text	Description
KAIC25198-E	A property in the '*HDVMAgent_conf file name*' has been incorrectly specified(line %d).	*Cause* A property in the `HDVMAgent.conf` file has been incorrectly specified(line %d). *Action* The `HDVMAgent.conf` file might be corrupted. Check the file, and then try to install the Device Manager Agent again.
KAIC25208-E	Setup of the Device Manager agent has FAILED.	*Cause* The setup program could not be executed. *Action* Follow the instructions in the following messages: KAIC25029-I, KAIC25033-I.
KAIC25211-E	The installation or removal was canceled because the Device Manager agent was running. Wait a while, and then try again.	*Cause* An attempt to stop the HBsA Service has failed. *Action* Wait a while, and then try again.
KAIC25213-E	The specified user account does not exist.	*Cause* A user account that does not exist on the server was specified. *Action* Specify a user account that exists on the server.
KAIC25401-E	Acquisition of version information has failed.	*Cause* Possible causes are as follows: • Acquisition of the installation path failed. • *Device-Manager-agent-installation-directory*`\mod\hdvm\alet.xml` does not exist. • *Device-Manager-agent-installation-directory*`\mod\hdvm\alet.xml` file content is invalid. *Action* Re-install the Device Manager agent.
KAIC25523-I	*number of migrated files* out of *number of target files* were migrated.	*Cause* - *Action* -
KAIC25528-I	The list of instances for which the command was successfully	*Cause* -

Message ID	Message Text	Description
	executed is displayed. If you want to run the command again, specify the following instance numbers in the PairCfgMigration.ignoreInstanceNumber property: "*instance number 1*", "*instance number 2*", ...	*Action* -
KAIC25603-W	The following HORCM files could not be migrated: "*HORCM file name 1*", "*HORCM file name 2*", …	*Cause* - *Action* Check the logs, and then try again.
KAIC25607-W	An invalid device group could not be deleted. (device group = "*device group name*")	*Cause* - *Action* Delete the invalid device group.
KAIC25608-W	An invalid copy group could not be deleted. (copy group = "*copy group name*")	*Cause* - *Action* Delete the invalid copy group.
KAIC25609-W	One or more HORCM files could not be migrated. Check the logs.	*Cause* - *Action* Check the logs, and then try again.
KAIC25610-W	The RAID Manager, CCI, or XP7 RAID Manager version is not recommended. If you attempt to copy pairs by using virtual ID migration, either the copy task might fail or invalid device groups might be created.	*Cause* Either the version of RAID Manager is earlier than 01-32-03/01, or the version of XP7 RAID Manager is earlier than 01.32.01. *Action* Confirm the current versions in use. Then, either upgrade RAID Manager to version 01-32-03/01 or later, or upgrade XP7 RAID Manager to version 01.32.01 or later.
KAIC28201-W	The IP address could not be resolved from the specified hostname.	*Cause* The IP address could not be resolved from the hostname. *Action* • Make sure that the entered value is correct. • Make sure that the hostname is defined in the `hosts` file. • To specify an IPv6 address, `server.agent.JRE.location`

Message ID	Message Text	Description
		must be specified. Make sure that the specified value is correct.
KAIC28202-W	Access to the server has failed. (detail = "Verify network connectivity and that the Device Manager server is running")	*Cause* An attempt to connect to the server failed. Possible causes are as follows: • The specified IP address or host name is incorrect. • The connection is blocked by a firewall. • The Device Manager server is not installed. • The setting for using IPv6 is not set. *Action* • Make sure that the entered value is correct. • Check the firewall settings on the machines on both the host side and the server side. • If a firewall is configured between the host and the server, make sure that the settings are correct. • If you want to install the Device Manager server later, click **No** in the confirmation window, and then continue setup. • To specify an IPv6 address, `server.agent.JRE.location` must be specified. Make sure that the specified value is correct.
KAIC28203-W	Access to the server has failed. (detail = "Unauthorized user ID or password is invalid")	*Cause* The user ID or password was not authenticated by the server. *Action* Make sure that the entered value is correct.
KAIC28204-W	Access to the server has failed. (details = "A normal response could not be received from the Device Manager server.")	*Cause* An attempt to connect to the server failed. Possible causes are as follows: • The specified IP address or host name is incorrect. • The setting for using IPv6 is not set. • The Device Manager server is in the process of starting. *Action* • Make sure that the entered value is correct.

Message ID	Message Text	Description
		• To specify an IPv6 address, `server.agent.JRE.location` must be specified. Make sure that the specified value is correct. • Check the status of the Device Manager server. If the server is in the process of starting, wait a while, and then retry the operation.
KAIC28205-W	*(Windows)* RAID Manager is not installed on the selected drive. *(UNIX)* RAID Manager is not installed in the selected directory.	*Cause* *(Windows)* RAID Manager is not installed immediately under the specified drive. (specified drive: \HORCM) *(UNIX)* RAID Manager is not installed in the specified directory. *Action* If you want to install RAID Manager later, click **NO** in the confirmation window, and then continue setup. *(Windows)* Make sure that RAID Manager is installed on the specified drive. *(UNIX)* Make sure that RAID Manager is installed in the specified directory.
KAIC28210-W	*(Windows)* An error occurred while SSL communication was being set up. Do you want to modify the server configuration? Click Yes to modify the server configuration. Click No to keep the settings and proceed to the next step. *(UNIX)* An error occurred while SSL communication was being set up. Do you want to modify the server configuration? Enter (Y)es to modify the server configuration. Enter (N)o to keep the settings and proceed to the next step.	*Cause* The procedure to set up SSL communication of Device Manager agent might not have been performed properly. *Action* Verify the procedure to set up SSL communication of the Device Manager agent. If this does not solve the problem, collect maintenance information, and then contact customer support.
KAIC28211-W	*(Windows)*	*Cause*

Message ID	Message Text	Description
	An SSL communication error occurred. Do you want to modify the server configuration? Click Yes to modify the server configuration. Click No to keep the settings and proceed to the next step. *(UNIX)* An SSL communication error occurred. Do you want to modify the server configuration? Enter (Y)es to modify the server configuration. Enter (N)o to keep the settings and proceed to the next step.	An SSL communication error occurred for either of the following reasons: • The port number is not for SSL communication. • The truststore file on the Device Manager Agent and at the connection destination are different. • The truststore file is no longer valid. • The cipher suite differ by the Device Manager Agent and at the connection destination. *Action* Check the port number for the HDVM server. Check the contents of the truststore file. Check whether the cipher suite specified by the connection destination can use it by Java currently used by the Device Manager Agent. If this does not solve the problem, collect maintenance information, and then contact the Support Center.
KAIC28305-E	The specified IP address or hostname is invalid.	*Cause* The entered value is invalid. *Action* Enter a valid value.
KAIC28306-E	The specified port number is invalid.	*Cause* The entered value is invalid. *Action* Enter a valid value.
KAIC28307-E	The specified User ID is invalid.	*Cause* The entered value is invalid. *Action* Enter a valid value.
KAIC28308-E	The specified password is invalid.	*Cause* The entered value is invalid. *Action* Enter a valid value.
KAIC28309-E	The IP address or hostname contains invalid characters. Check the value and enter again. Refer to the Device	*Cause* An invalid character was entered. *Action* Enter a valid value.

Message ID	Message Text	Description
	Manager agent manual for characters you can use.	
KAIC28310-E	The user ID contains invalid characters. Check the value and enter again. Refer to the Device Manager agent manual for characters you can use.	*Cause* An invalid character was entered. *Action* Enter a valid value.
KAIC28311-E	The password contains invalid characters. Check the value and enter again. Refer to the Device Manager agent manual for characters you can use.	*Cause* An invalid character was entered. *Action* Enter a valid value.
KAIC28312-E	An unexpected error occurred when the Device Manager server information was being specified. The server information cannot be specified.	*Cause* An attempt to specify the server information failed. Possible causes are as follows: • Installation failed. • Creation of a child process (for specifying the server information) failed. *Action* Collect maintenance information, and then contact the Support Center.
KAIC28313-E	An I/O error occurred when the Device Manager server information was being specified. The server information cannot be specified.	*Cause* An attempt to specify the server information failed. Possible causes are as follows: • The `server.properties` file does not exist. • The `server.properties` file is write-protected. • There is not enough free space on the disk. *Action* • Make sure that the `server.properties` file exists, and you have write permissions for the file. • Make sure that there is enough free space on the disk.
KAIC28314-E	An unexpected error occurred when the execution period of the HiScan command was being specified.	*Cause* An attempt to specify the execution period of the `HiScan` command failed. Possible causes are as follows: • Installation failed.

Message ID	Message Text	Description
	The execution period of the HiScan command cannot be specified.	• Creation of a child process (for specifying the execution period of the `HiScan` command) failed. *Action* Collect maintenance information, and then contact the Support Center.

KAIC28315-E	An I/O error occurred when the execution period of the HiScan command was being specified.
	The execution period of the HiScan command cannot be specified.
		Cause
		An attempt to specify the execution period of the `HiScan` command has failed. Possible causes are as follows:
		• There are no files in the directories shown below.
		• The files in the directories shown below are write-protected.
		• There is not enough free space on the disk.
		• An attempt to write to the `crontab` file has failed.
		Windows:
		Device-Manager-agent-installation-directory`\mod\hdvm\config`
		UNIX platforms except AIX:
		`/opt/HDVM/HBaseAgent/mod/hdvm/config`
		AIX:
		`/usr/HDVM/HBaseAgent/mod/hdvm/config`
		Action
		• Make sure that the directories shown below exist, and you have write permissions for the files.
		• Make sure that there is enough free space on the disk.
		• Make sure the following commands can be used:
		- In UNIX: `crontab`
		- In Windows Server 2008 and earlier versions of Windows Server: `at`
		- In all other Windows OSs: `schtasks`
		Windows:
		Device-Manager-agent-installation-directory`\mod\hdvm\config`
		UNIX platforms except AIX:
		`/opt/HDVM/HBaseAgent/mod/hdvm/config`

Message ID	Message Text	Description
		AIX: `/usr/HDVM/HBaseAgent/mod/hdvm/config`
KAIC28316-E	An unexpected error occurred when RAID Manager settings were being specified. These RAID Manager settings cannot be specified.	*Cause* An attempt to specify RAID Manager settings has failed. Possible causes are as follows: • Installation of RAID Manager failed. • Creation of a child process (for specifying RAID Manager settings) failed. *Action* Collect maintenance information, and then contact the Support Center.
KAIC28317-E	An I/O error occurred when RAID Manager settings were being specified. These RAID Manager settings cannot be specified.	*Cause* An attempt to specify RAID Manager settings has failed. Possible causes are as follows: • The `server.properties` file does not exist. • The `server.properties` file is write-protected. • There is not enough free space on the disk. *Action* • Make sure that the `server.properties` file exists, and that you have write permissions for the file. • Make sure that there is enough free space on the disk.
KAIC28318-E	A fatal error occurred during the setup processing of the Device Manager agent. Setup processing has stopped.	*Cause* An invalid-environment error occurred due to either of the following reasons: • The Device Manager agent is not installed. • An attempt to obtain the installation directory for the Device Manager agent has failed. *Action* Collect maintenance information, and then contact the Support Center.
KAIC28319-E	A site-local address or link-local address is specified for the IP address. To use IPv6 addresses, you must specify a global address.	*Cause* A site-local address or link-local address is specified for the IP address. *Action*

Message ID	Message Text	Description
		Please specify a global address.
KAIC28320-E	*(Windows)* The specified certificate store folder does not exist. Specify the folder where the certificate is stored. *(UNIX)* The specified certificate store directory does not exist. Specify the directory where the certificate is stored.	*Cause* *(Windows)* The specified certificate store folder does not exist. *(UNIX)* The specified certificate store directory does not exist. *Action* *(Windows)* Please specify the appropriate folder. *(UNIX)* Please specify the appropriate directory.
KAIC28321-E	The entered Device Manager agent truststore password is invalid. Check the value and enter it again. For the characters that you can use, see the Device Manager agent manual.	*Cause* Possible causes are as follows: • The entered Device Manager agent truststore password might be fewer than 6 characters. • The entered Device Manager agent truststore password contains characters other than the following: `A-Z`, `a-z`, `0-9`, and space characters. • A password that contains characters other than the following might have been specified when `hbsa_keytool.bat` or `KeyTool` was used to change the password: `A-Z`, `a-z`, `0-9`, and space characters. *Action* Enter the correct password.
KAIC28322-E	Failed to import the Device Manager server certificate to the Device Manager agent truststore.	*Cause* Failed to import the Device Manager server certificate to the Device Manager agent truststore for either of the following reasons: • The entered truststore password is invalid. • There is a conflict with the certificate alias. *Action* Enter the correct password, or try clicking [**Next**] again.

Message ID	Message Text	Description
KAIC28353-E	Setup processing has stopped because the Add-On module is currently running.	*Cause* The HBsA service could not be stopped because an Add-On module is currently running. *Action* Wait a while, and then retry the operation.
KAIC28604-W	The handle could not be acquired. (serial number="*serial-number*")	*Cause* The following causes are possible: • The host does not recognize the command device specified in `perf_cmddev.properties`. • User authentication is enabled for the command device specified in `perf_cmddev.properties`. *Action* Verify that the host recognizes the command device specified in `perf_cmddev.properties`. Verify that user authentication is disabled for the command device specified in `perf_cmddev.properties`. If this does not solve the problem, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC28615-W	The host does not recognize the following defined command device(s):	*Cause* The host does not recognize the command device defined in the file `perf_cmddev.properties`. *Action* • Make sure that the description of the command device is correct. • Make sure that the connection status between the host and the storage system is correct.
KAIC28616-W	The following command device(s) recognized by the host are not defined in the command device information:	*Cause* No command device recognized by the host is defined in the file `perf_cmddev.properties`. *Action* • Add the specified command device to the properties file. • Update the file `perf_cmddev.properties` by

Message ID	Message Text	Description
		using the following command: `perf_findcmdev write`
KAIC28619-W	The handle could not be acquired. (serial number="*serial-number*", SLPR number="*SLPR-number*")	*Cause* The following causes are possible: • The host does not recognize the command device specified in `perf_cmddev.properties`. • User authentication is enabled for the command device specified in `perf_cmddev.properties`. *Action* Verify that the host recognizes the command device specified in `perf_cmddev.properties`. Verify that user authentication is disabled for the command device specified in `perf_cmddev.properties`. If this does not solve the problem, to determine the cause and resolve the problem, detailed investigation is required. Contact customer support, who may ask you to collect troubleshooting information.
KAIC28804-E	No command device is defined in the configuration file.	*Cause* No command device is defined in the configuration file. *Action* Define the command devices by using the `perf_findcmddev` command.
KAIC28805-E	An I/O error occurred while reading the configuration file.	*Cause* An I/O error occurred while reading the `perf_cmddev.properties` file. *Action* Make sure of the following: • The `perf_cmddev.properties` file exists. • The `perf_cmddev.properties` file is readable. If the `perf_cmddev.properties` file does not exist, create the file by using the `perf_findcmddev` command.
KAIC28807-E	The processing was interrupted because no handle could be acquired from RMLIB.	*Cause* The RMILIB API became unusable during request processing. *Action*

Message ID	Message Text	Description
		If the problem occurs frequently, collect maintenance information and contact the support center.
KAIC28809-E	The file perf_cmddev.properties was not found.	*Cause* The file `perf_cmddev.properties` does not exist. *Action* Make sure that the file `perf_cmddev.properties` exists and is valid.
KAIC28810-E	An I/O error occurred. *filename* (Error details: errno = *error-code*, msg = *error-message*)	*Cause* A file I/O error occurred. Check the contents of the error message. Possible causes are as follows: • The file `perf_cmddev.properties` is write-protected. • There is not enough free space on the disk. • The directory to which the file will be written does not exist. *Action* • Make sure that the file `perf_cmddev.properties` exists and is not write-protected. • Make sure that there is enough free space on the disk. • Make sure that the directory to which the file will be written exists.

KAIC30000 - KAIC39999

The following table describes messages KAIC30000 to KAIC39999, which are related to Device Manager.

Table 2-12 KAIC30000 - KAIC39999 (trace messages related to Device Manager)

Message ID	Message Text	Description
KAIC30004-I	Device Manager Server has started.	No action is required.
KAIC30005-I	Device Manager Server has stopped.	No action is required.
KAIC30017-I	Device Manager Server has started in Secure mode.(Cipher Suites="*Cipher Suites*")	No action is required.

Message ID	Message Text	Description
KAIC30029-I	The protocols used in Device Manager Server Secure mode are "*protocols*".	-
KAIC30442-I	A user has been set up to receive SNMP traps.	No action is required.
KAIC30522-E	An SNMP trap was received but it was ignored because authentication failed (address = *SNMP trap IP address*). Check and, if necessary, revise the configuration. If needed, send test SNMP traps to verify that they are being sent and received correctly.	Check the configuration. If necessary, change the configuration and send test SNMP traps.
KAIC30962-E	The database backup failed. (message ID = *message ID*, message description = "*message description*") Check the messages guide for Device Manager, and then retry the operation. If this problem continues, collect the error information and contact customer support.	Check the messages guide for Device Manager, and then retry the operation. If this problem continues, collect the error information and contact customer support.
KAIC30963-I	The database was successfully backed up.	-
KAIC30964-I	The backup of the database was skipped because the database is currently being updated. The backup of the database will be retried (retry interval in minutes = *retry interval in minutes*).	-
KAIC30965-I	The backup of the database was stopped because a request to update the database was received. The backup of the database will be retried (retry interval in minutes = *retry interval in minutes*).	-
KAIC32006-I	Device Manager HiKeyTool has started.	No action is required.
KAIC32007-I	Device Manager HiKeyTool has stopped.	No action is required.
KAIC32101-I	Device Manager *client-name* has started.	No action is required.
KAIC32102-I	Device Manager *client-name* has finished.	No action is required.
KAIC33020-W	An inconsistency was detected from the database information.	No action is required.

Message ID	Message Text	Description
	The database will now be initialized.	
KAIC33025-W	An inconsistency was detected from the database information. Restore the database from the backup.	No action is required.
KAIC33026-I	The database will now be initialized.	No action is required.
KAIC34265-W	Completion of the task (TaskID: *TaskID*, execution time: *Task start time* - *Task finish time*) was not detected from vCenter within a certain period of time. An SLU or SLU snapshot (SLU ID: *SLU ID*) that is not being used from vCenter might have been created. Check the latest configuration information, and then change the configuration as necessary.	-
KAIC35101-E	Maintenance information (*maintenance information*)	-
KAIC35102-I	Maintenance information (*maintenance information*)	-
KAIC35103-W	Maintenance information (*maintenance information*)	-
KAIC35435-I	The version of the "*library-name*" is "*version*(*additional-information*)".	No action is required.
KAIC35436-W	An attempt to get the version of "*library-name*" has failed (Error code "*error-code*").	No action is required.
KAIC36101-E	Maintenance information (*maintenance information*)	-
KAIC36102-I	Maintenance information (*maintenance information*)	-
KAIC36103-W	Maintenance information (*maintenance information*)	-
KAIC39004-I	The CIM-WBEM Service has started.	No action is required.
KAIC39005-I	The CIM-WBEM Service has stopped.	No action is required.

KAIC60000 - KAIC69999

The following table describes messages KAIC60000 to KAIC69999, which are related to Device Manager.

Table 2-13 KAIC60000 - KAIC69999 (trace messages related to Device Manager)

Message ID	Message Text	Description
KAIC60000-E	An error occurred. The specified parameter *resource type* was deleted from the database.	Revise the specified resource type, and then retry the operation.
KAIC60001-E	An error occurred.	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC60002-E	Unable to communicate with the Device Manager server. Possible causes: (1) A Device Manager server service is being initialized. (2) A Device Manager server service is stopped or was restarted.	If a Device Manager server service is being initialized, wait and retry. If a Device Manager server service is stopped or was restarted, restart the Common Component and all related services, and retry. If the problem continues, collect the error information, and then contact the Support Center.
KAIC60012-E	The *function name* function is not supported by the specified storage system.	Revise the specified storage system and retry.
KAIC60013-E	An error occurred. (maintenance information = *maintenance information*)	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC60014-E	"*Name*" is invalid. Use name less than "*max-character-string-length*" .	"*Name*" is invalid. Use name less than "*max-character-string-length*".
KAIC60015-E	"*Name*" is invalid. Specify it by using the following character: "*Character that can be input*"	Specify it by using the following character: "*Character that can be input*"
KAIC61000-E	An error occurred while accessing the database. (maintenance information = *Maintenance information*)	To determine the cause and resolve the problem, detailed investigation is required. Contact the Support Center, who may ask you to collect troubleshooting information.
KAIC61001-E	The database did not update. (maintenance information = *Maintenance information*)	Wait a while, and then retry the operation. If the problem continues, collect the error information, and then contact the Support Center.
KAIC61002-E	The database is blocked.	Contact the server administrator.
KAIC61501-E	The database did not update. (maintenance information = *maintenance information*)	Wait a few minutes and try again. If this problem continues, collect the error information and contact Support.

Message ID	Message Text	Description
KAIC62001-E	Unable to update database. (maintenance information=*maintenance information*)	Wait a few minutes and try again. If this problem continues, collect the error information and contact Support.
KAIC63500-W	Unable to collect data. (collected = *number of collected storage systems*, skipped = *number of skipped storage systems*)	Refer to the messages for each storage system.
KAIC63501-E	Cannot retrieve storage system data. (collected = *number of collected storage systems*, failed = *number of failed storage systems* skipped = *number of skipped storage systems*)	View the storage system error messages.

KAIC70000 - KAIC79999

The following table describes messages KAIC70000 to KAIC79999, which are related to Device Manager GUI.

Table 2-14 KAIC70000 - KAIC79999 (messages related to Device Manager GUI)

Message ID	Message Text	Description
KAIC70000-E	Refresh of replication performance data failed. (maintenance information = *message*) Refer to the message displayed in the maintenance information, and try to refresh replication performance data again.	*Cause* - *Action* Refer to the message displayed in the maintenance information, and try to refresh replication performance data again.
KAIC70001-E	Unable to find the specified copy group. The specified copy group might be deleted. Cancel the operation and verify the copy group list, then select valid copy groups.	*Cause* The specified copy group might be deleted. *Action* Cancel the operation and verify the copy group list, then select valid copy groups.
KAIC70002-E	You cannot select more than *max-number-of-copy-groups* copy groups. Decrease the number of copy groups selected.	*Cause* - *Action* Decrease the number of copy groups selected.
KAIC70003-E	You do not have permission to perform this operation. Perform this operation as a user with the required permissions.	*Cause* - *Action* Perform this operation as a user with the required permissions.
KAIC70004-E	No copy pairs in the copy group. Create a copy pair and refresh replication performance data. Then retry the operation.	*Cause* - *Action* Create a copy pair and refresh replication performance data. Then retry the operation.
KAIC70005-E	You do not have permission to perform this operation. Check	*Cause*

Message ID	Message Text	Description
	the refresh setting of HRpM and check if HRpM is collecting data from HDvM Agent. Check the setting of HRpM connection and refresh replication performance data.	- *Action* Check the refresh setting of HRpM and check if HRpM is collecting data from HDvM Agent. Check the setting of HRpM connection and refresh replication performance data.
KAIC70006-E	The copy type of the copy group is not UR. Check the status of copy pairs. If the status of copy pairs is Simplex, create a copy pair and refresh replication performance data. Then retry the operation.	*Cause* - *Action* Check the status of copy pairs. If the status of copy pairs is Simplex, create a copy pair and refresh replication performance data. Then retry the operation.
KAIC70007-W	Refresh of replication performance data failed. (maintenance information = *message*) Refer to the message displayed in the maintenance information, and try to refresh replication performance data again.	*Cause* - *Action* Refer to the message displayed in the maintenance information, and try to refresh replication performance data again.
KAIC70008-W	Unable to refresh data for Replication tab. Detail: "*Detail Information*" When using Replication tab, follow the detailed instructions in the message.	*Cause* - *Action* When using Replication tab, follow the detailed instructions in the message.
KAIC70009-W	Unable to refresh data for Analytics tab and Replication tab. Detail: "*Detail Information*" When using Analytics tab or Replication tab, follow the detailed instructions in the message.	*Cause* - *Action* When using Analytics tab or Replication tab, follow the detailed instructions in the message.
KAIC70010-W	No data has been collected from Tuning Manager. Verify whether Tuning Manager is monitoring storage systems and refresh replication performance data.	*Cause* - *Action* Verify whether Tuning Manager is monitoring storage systems and refresh replication performance data.
KAIC70011-E	Unable to collect data from Tuning Manager. Verify whether Tuning Manager is monitoring storage systems and refresh replication performance data.	*Cause* - *Action* Verify whether Tuning Manager is monitoring storage systems and refresh replication performance data.

Message ID	Message Text	Description
KAIC70012-E	Unable to collect data from Replication Manager. Verify settings of collaboration with Replication Manager and refresh replication performance data.	*Cause* - *Action* Verify settings of collaboration with Replication Manager and refresh replication performance data.
KAIC70013-W	No more memos can be created. A maximum of *memo-writing-maximum* memos can be created for each analysis. To create more memos, delete any unnecessary memos. Some memos might have been created for metrics or time periods that are not currently displayed.	*Cause* - *Action* To create more memos, delete any unnecessary memos. Some memos might have been created for metrics or time periods that are not currently displayed.
KAIC70014-W	No data has been collected from Performance Advisor. Verify whether Performance Advisor is monitoring storage systems and refresh replication performance data.	*Cause* - *Action* Verify whether Performance Advisor is monitoring storage systems and refresh replication performance data.
KAIC70015-E	Unable to collect data from Performance Advisor. Verify whether Performance Advisor is monitoring storage systems and refresh replication performance data.	*Cause* - *Action* Verify whether Performance Advisor is monitoring storage systems and refresh replication performance data.
KAIC70016-W	The starting LDEV IDs of one or more copy groups was changed because of duplicate LDEV IDs. Make sure there are no problems, and then execute the task. To revise the starting LDEV IDs, return to the previous step.	*Cause* - *Action* -
KAIC70017-E	There is a shortage of available LDEV IDs. Return to the previous step, and make sure the settings are correct. If necessary, delete any unnecessary volumes.	*Cause* - *Action* Return to the previous step, and make sure the settings are correct. If necessary, delete any unnecessary volumes.
KAIC70018-E	The copy topology configuration has not been changed. Return to the previous step, expand the copy	*Cause* - *Action*

Message ID	Message Text	Description
	topology, then try the operation again.	Return to the previous step, expand the copy topology, then try the operation again.
KAIC70019-E	There are no available UDP ports. (pair management server = *cci-server-name*) Check the status of the pair management server. If necessary, delete any unnecessary copy groups or configuration definition files. Alternatively, specify a different pair management server.	*Cause* - *Action* Check the status of the pair management server. If necessary, delete any unnecessary copy groups or configuration definition files. Alternatively, specify a different pair management server.
KAIC70020-E	There are no available instance numbers. (pair management server = *cci-server-name*) Check the status of the pair management server. If necessary, delete any unnecessary copy groups or configuration definition files. Alternatively, specify a different pair management server.	*Cause* - *Action* Check the status of the pair management server. If necessary, delete any unnecessary copy groups or configuration definition files. Alternatively, specify a different pair management server.
KAIC70021-E	There are no available LUNs in the specified host group. Return to the previous step, and specify a different host group on other port or create a new host group on other port.	*Cause* - *Action* Return to the previous step, and specify a different host group on other port or create a new host group on other port.
KAIC70022-E	Data could not be collected from Replication Manager. (details = *detail-information*) Refer to the message given in the details, resolve the problem, and then try again.	*Cause* - *Action* Refer to the message given in the details, resolve the problem, and then try again.
KAIC70023-E	The Replication tab does not support the current configuration of the copy topology. Complete the task using Replication Manager, Storage Navigator, or CCI.	*Cause* - *Action* Complete the task using Replication Manager, Storage Navigator, or CCI.
KAIC70024-W	One or more secondary volumes exist, for which pair removal was completed. The volume (storage system = *storagename*, secondary volume = *volume*) cannot be	*Cause* The volume (storage system = *storagename*, secondary volume = *volume*) cannot be deleted because it is not a Hitachi Dynamic Provisioning volume or V-VOL. *Action*

Message ID	Message Text	Description
	deleted because it is not a Hitachi Dynamic Provisioning volume or V-VOL. After the task has completed, delete the volume that was not deleted by using the [Resources] tab.	After the task has completed, delete the volume that was not deleted by using the [**Resources**] tab.
KAIC70025-W	A copy pair, for which the copy direction is reversed, exists in a copy group. (copy group = *copy-group-name*) In Replication Manager, revise the configuration so that all copy pairs are in the same copy direction.	*Cause* - *Action* In Replication Manager, revise the configuration so that all copy pairs are in the same copy direction.
KAIC70026-E	The task completed, but the workflow could not be deleted from Replication Manager. Check the [Workflow] window of Replication Manager, and delete the workflow that has the same workflow name.	*Cause* - *Action* Check the [Workflow] window of Replication Manager, and delete the workflow that has the same workflow name.
KAIC70027-E	[Pair Management Server for the Snapshot Groups] has not been set for the specified storage system. (storage system = *storage-system-name*) In the [Storage Systems] view for Replication Manager, specify [Pair Management Server for the Snapshot Groups], and then try the operation again.	*Cause* - *Action* In the [Storage Systems] view for Replication Manager, specify [Pair Management Server for the Snapshot Groups], and then try the operation again.
KAIC70028-E	The task for the copy topology could not be initiated. (details = *detail-information*) The selected resources might already be in use by another task or they might have been deleted. Cancel the operation, and then check the statuses of the resources.	*Cause* The selected resources might already be in use by another task or they might have been deleted. *Action* Cancel the operation, and then check the statuses of the resources.
KAIC70029-E	The task could not be initiated because required information could not be acquired. The replication configuration might have been changed. Cancel the operation, and then check the statuses of the resources.	*Cause* The replication configuration might have been changed. *Action* Cancel the operation, and then check the statuses of the resources.
KAIC70030-E	The selected copy topology could not be expanded by using the Replication tab,	*Cause* - *Action*

Message ID	Message Text	Description
	because the copy topology includes Simplex copy pairs. Use the Change Pair Status wizard to change the statuses of the copy pairs, and then try again. Alternatively, complete the task using Replication Manager.	Use the Change Pair Status wizard to change the statuses of the copy pairs, and then try again. Alternatively, complete the task using Replication Manager.
KAIC70031-E	Information about the selected copy topology could not be displayed. The configuration of the associated resources might have been changed. Close this dialog box, select the site from the navigation area, and then try again.	*Cause* The configuration of the associated resources might have been changed. *Action* Close this dialog box, select the site from the navigation area, and then try again.
KAIC70032-E	The replication configuration data could not be refreshed. (details = *message*) Refer to the details in the message, remove the cause of the problem, and then refresh the replication configuration data again.	*Cause* - *Action* Refer to the details in the message, remove the cause of the problem, and then refresh the replication configuration data again.
KAIC70033-E	*resource* could not be created. (details = *error-message* (*detailed-error-message*)) Refer to the details in the message, remove the cause of the problem, and then try again.	*Cause* - *Action* Refer to the details in the message, remove the cause of the problem, and then try again.
KAIC70034-W	One or more secondary volumes exist, for which pair removal was completed. The volume (storage system = *storage-system*, secondary volume = *secondary-volume*) cannot be deleted because it has the NAS Platform (User LU) attribute.	*Cause* The volume (storage system = *storage-system*, secondary volume = *secondary-volume*) cannot be deleted because it has the NAS Platform (User LU) attribute. *Action* -
KAIC70035-E	*resource* might not have been created. The Replication Manager task was deleted during execution. Display the latest configuration. Then, check whether the requested resources were created.	*Cause* The Replication Manager task was deleted during execution. *Action* Display the latest configuration. Then, check whether the requested resources were created.
KAIC70036-E	The specified value is invalid. (parameter name = *parameter-name*, specified value = *specified-value*) Check	*Cause* - *Action*

Message ID	Message Text	Description
	and revise the parameters, if necessary.	Check and revise the parameters, if necessary.
KAIC70037-E	The specified number of characters exceeds the maximum allowable number of characters. (parameter name = *parameter-name*, specified value = *specified-value*, maximum number of characters = *maximum-number*) Check and revise the parameters, if necessary.	*Cause* - *Action* Check and revise the parameters, if necessary.
KAIC70038-E	The specified value is less than the minimum required value. (parameter name = *parameter-name*, specified value = *specified-value*, minimum value = *minimum-value*) Check and revise the parameters, if necessary.	*Cause* - *Action* Check and revise the parameters, if necessary.
KAIC70039-E	The specified value is greater than the maximum allowable value. (parameter name = *parameter-name*, specified value = *specified-value*, maximum value = *maximum-value*) Check and revise the parameters, if necessary.	*Cause* - *Action* Check and revise the parameters, if necessary.
KAIC70040-E	Required parameters are not specified. Check and revise the parameters, if necessary.	*Cause* - *Action* Check and revise the parameters, if necessary.
KAIC70041-E	No resource exists at the specified URL. (URL = *url*) Check the URL.	*Cause* - *Action* Check the URL.
KAIC70042-E	The media type specified in the Accept header is not supported. Check the Accept header.	*Cause* - *Action* Check the Accept header.
KAIC70043-E	The media type specified in the Content-Type header is not supported. Check the Content-Type header.	*Cause* - *Action* Check the Content-Type header.

Message ID	Message Text	Description
KAIC70044-E	The specified HTTP method is not allowed. Check the HTTP method.	*Cause* - *Action* Check the HTTP method.
KAIC70045-E	The combination of the specified parameters is invalid. Check and, if necessary, revise the parameters.	*Cause* - *Action* Check and, if necessary, revise the parameters.
KAIC70046-E	The Authorization HTTP header, which is required for authentication, is not specified. Specify the necessary value for the Authorization header.	*Cause* - *Action* Specify the necessary value for the Authorization header.
KAIC70047-E	The user ID or password is incorrect. Check the user ID and password settings.	*Cause* - *Action* Check the user ID and password settings.
KAIC70048-E	User authentication failed. The Authorization header is incorrect. Check and revise the Authorization header, if necessary.	*Cause* The Authorization header is incorrect. *Action* Check and revise the Authorization header, if necessary.
KAIC70049-E	The specified parameter (*parameter*) in the header (*attribute*) is invalid. Check and revise the parameter, if necessary.	*Cause* - *Action* Check and revise the parameter, if necessary.
KAIC70050-E	An error occurred because the value of the specified parameter (*parameter*) is not "*true-type*". Check and revise the parameter, if necessary.	*Cause* - *Action* Check and revise the parameter, if necessary.
KAIC70051-E	The specified object ID in the URL is incorrect or empty. (specified value = *specified-object-id*) Check and revise the object ID format, if necessary.	*Cause* - *Action* Check and revise the object ID format, if necessary.
KAIC70052-E	The specified object (*object-id*) does not exist. Check and revise the object ID, if necessary.	*Cause* - *Action*

Message ID	Message Text	Description
		Check and revise the object ID, if necessary.
KAIC70053-E	The format of the string specified in the request body is invalid. Revise the specified request body so that it is in the correct format.	*Cause* - *Action* Revise the specified request body so that it is in the correct format.
KAIC70054-E	An unexpected error occurred. An internal error might have occurred. Detailed investigation is required to determine the cause and resolve the problem.	*Cause* An internal error might have occurred. *Action* Detailed investigation is required to determine the cause and resolve the problem.
KAIC70055-E	The operation could not be performed, because Replication Manager is in maintenance mode. Change Replication Manager to normal mode, and then try again.	*Cause* - *Action* Change Replication Manager to normal mode, and then try again.
KAIC70056-E	You do not have permission to perform this operation. Perform this operation as a user with the required permissions.	*Cause* - *Action* Perform this operation as a user with the required permissions.
KAIC70057-E	No valid license was found. Register a valid license key.	*Cause* - *Action* Register a valid license key.
KAIC70058-E	The task cannot be registered. A task with this name already exists. Specify a unique task name.	*Cause* - *Action* Specify a unique task name.
KAIC70059-E	There is an error in the information about the copy topology type. Device Manager was upgraded, or there is an error in the copy pair definition. In the [Management] tab, choose a target storage system and click [Refresh Storage Systems], or revise the copy pair definition. When using a volume managed by a remote instance of Device Manager for a global-active device copy pair, update the configuration information from	*Cause* Device Manager was upgraded, or there is an error in the copy pair definition. *Action* In the [Management] tab, choose a target storage system and click [Refresh Storage Systems], or revise the copy pair definition. When using a volume managed by a remote instance of Device Manager for a global-active device copy pair, update the configuration information from [Refresh Settings] of [Other

Message ID	Message Text	Description
	[Refresh Settings] of [Other Operations] in the Copy Topology table.	Operations] in the Copy Topology table.
KAIC70060-E	The host group cannot be created. Not enough host group numbers are available for port *storage-port-name*. Register more host group numbers in the virtual storage machine.	*Cause* - *Action* -
KAIC70061-E	The same storage systems were selected. Select different storage systems.	*Cause* - *Action* Select different storage systems.
KAIC70062-E	You can not proceed to set up operation with this configuration. Device Manager does not support the storage systems and the copy type you specified. Confirm the storage systems and their microcode support the configuration. Also, confirm HDvM and HRpM support it.	*Cause* Device Manager does not support the storage systems and the copy type you specified. *Action* Confirm the storage systems and their microcode support the configuration. Also, confirm HDvM and HRpM support it.
KAIC70063-E	The operation could not be performed, because Replication Manager is in maintenance mode. Change Replication Manager to normal mode, and then try again.	*Cause* - *Action* Change Replication Manager to normal mode, and then try again.
KAIC70064-E	Failed to acquire information of the storage systems. The storage systems might not be managed in HDvM. Close this dialog box and confirm whether the storage systems is managed in the HDvM.	*Cause* The storage systems might not be managed in HDvM. *Action* Close this dialog box and confirm whether the storage systems is managed in the HDvM.
KAIC70065-E	Adding copy pairs is not supported in the current configuration. The current configuration might be unsupported (example: a configuration file that defines volumes on a virtual storage machine). Check the target copy topology.	*Cause* The current configuration might be unsupported (example: a configuration file that defines volumes on a virtual storage machine). *Action* Check the target copy topology.
KAIC70066-E	Remote copying is not supported on the selected combination of storage	*Cause* - *Action*

Message ID	Message Text	Description
	systems. Select different storage systems.	Select different storage systems.
KAIC70067-E	The task for the copy topology could not be initiated. The selected resources might already be in use by another task or they might have been deleted. Cancel the operation, and then check the statuses of the resources.	*Cause* The selected resources might already be in use by another task or they might have been deleted. *Action* Cancel the operation, and then check the statuses of the resources.
KAIC70068-E	The selected copy topology cannot be expanded because it includes a copy pair in a status other than "Pair". Use [Change Pair Status] to set all copy pairs in the topology to "Pair" status, and then retry the operation.	*Cause* - *Action* Use [Change Pair Status] to set all copy pairs in the topology to "Pair" status, and then retry the operation.
KAIC70069-E	You cannot change the selected copy topology in the Replication tab. Perform the operation using Replication Manager.	*Cause* - *Action* Perform the operation using Replication Manager.
KAIC70070-E	A secondary volume could not be set automatically. No volume meets the conditions. Create a new volume or revise an allocated volume, and then click the [Automatically Set Secondary Volumes] button again.	*Cause* No volume meets the conditions. *Action* Create a new volume or revise an allocated volume, and then click the [Automatically Set Secondary Volumes] button again.
KAIC70071-E	The selected copy topology cannot be expanded because it includes a global-active device copy pair for which a CTG ID is not set.	*Cause* - *Action* -
KAIC70072-E	The selected copy topology cannot be expanded. The combination of storage systems does not support 3DC with Delta Resync. Check the copy topology.	*Cause* The combination of storage systems does not support 3DC with Delta Resync. *Action* Check the copy topology.
KAIC70073-W	One or more secondary volumes exist, for which pair removal was completed. The volume (storage system = *storage-system*, secondary volume = *secondary-volume*) cannot be deleted because it	*Cause* The volume (storage system = *storage-system*, secondary volume = *secondary-volume*) cannot be deleted because it has the NAS Platform (System LU) attribute. *Action*

Message ID	Message Text	Description
	has the NAS Platform (System LU) attribute.	-
KAIC70074-W	The ALUA attribute of the secondary volume cannot be changed to match the primary volume. The Device Manager instance (service) at the remote site (*device-manager*) has not been started, or the version is old. Make sure that the Device Manager service is running. If necessary, update the Device Manager version, and then try again.	*Cause* The Device Manager instance (service) at the remote site (*device-manager*) has not been started, or the version is old. *Action* Make sure that the Device Manager service is running. If necessary, update the Device Manager version, and then try again.
KAIC70075-E	The [Continue I/O using secondary volumes] setting cannot be set. A consistency group ID is specified for the copy pair, and not all copy pairs in the copy group are selected. Select all copy pairs, or clear the [Continue I/O using secondary volumes] check box.	*Cause* A consistency group ID is specified for the copy pair, and not all copy pairs in the copy group are selected. *Action* Select all copy pairs, or clear the [Continue I/O using secondary volumes] check box.
KAIC70076-E	A copy group contains a copy pair for which the copy direction is different. (copy group = *copy-group-name*) In Replication Manager, revise the configuration so that all copy pairs are in the same copy direction.	*Cause* - *Action* In Replication Manager, revise the configuration so that all copy pairs are in the same copy direction.
KAIC70077-E	The selected copy topology cannot be shrunk by using the Replication tab, because the copy topology contains a remote copy pair in the Simplex status. Either use Replication Manager or use the Change Pair Status wizard to change the status of the copy pair, then try again.	*Cause* - *Action* Either use Replication Manager or use the Change Pair Status wizard to change the status of the copy pair, then try again.
KAIC70078-E	The selected copy topology cannot be shrunk because the configuration is 3DC Cascade. To change a 3DC Cascade configuration to a 3DC Multi Target with Delta Resync configuration, reduce the target copy topology to "2DC Remote Copy". Next, extend the copy topology to "3DC Multi Target", and then to "3DC Multi Target with Delta Resync".	*Cause* - *Action* To change a 3DC Cascade configuration to a 3DC Multi Target with Delta Resync configuration, reduce the target copy topology to "2DC Remote Copy". Next, extend the copy topology to "3DC Multi Target", and then to "3DC Multi Target with Delta Resync".

Message ID	Message Text	Description
KAIC70079-E	The selected copy topology cannot be shrunk because the configuration is Global-Active Device and Universal Replicator with Delta Resync. Use Replication Manager to complete the task.	*Cause* - *Action* Use Replication Manager to complete the task.
KAIC70080-E	The topology type could not be expanded. Create a bidirectional remote path between *primary-storage-system* and *secondary-storage-system*.	*Cause* - *Action* Create a bidirectional remote path between *primary-storage-system* and *secondary-storage-system*.
KAIC70081-W	One or more secondary volumes exist, for which pair removal was completed. The volume (storage system = *storage-system*, secondary volume = *secondary-volume*) cannot be deleted, because dedupe and compression is enabled.	*Cause* The volume (storage system = *storage-system*, secondary volume = *secondary-volume*) cannot be deleted, because dedupe and compression is enabled. *Action* -
KAIC71000-E	End time must be later than the start time. Revise the time.	*Cause* - *Action* Revise the time.
KAIC71001-E	Specified start time is earlier than *earliest-time-that-can-be-specified*. The start time cannot be earlier than 30 days before the current time. Revise the time.	*Cause* The start time cannot be earlier than 30 days before the current time. *Action* Revise the time.
KAIC71002-E	Specified end time is later than *latest-time-that-can-be-specified*. The end time cannot be later than the current time. Revise the time.	*Cause* The end time cannot be later than the current time. *Action* Revise the time.
KAIC71003-E	Specified start time is later than *latest-time-that-can-be-specified*. The start time cannot be later than the current time. Revise the time.	*Cause* The start time cannot be later than the current time. *Action* Revise the time.
KAIC71004-E	Specified end time is earlier than *earliest-time-that-can-be-specified*. The end time cannot be earlier than 30 days before	*Cause* The end time cannot be earlier than 30 days before the current time. *Action* Revise the time.

Message ID	Message Text	Description
	the current time. Revise the time.	
KAIC71005-I	Maximum number of charts is *max-size-of-configurable-charts*. To add new chart, remove existing ones	*Cause* - *Action* To add new chart, remove existing ones
KAIC71006-W	There are path groups to which network bandwidth is not set. To increase quality of performance analysis, set network bandwidth.	*Cause* - *Action* To increase quality of performance analysis, set network bandwidth.
KAIC71007-E	No performance data which can be analyzed. Close dialog. To analyze performance data, check the configuration of HTnM, and wait until performance data is collected or refresh performance data by manually.	*Cause* - *Action* Close dialog. To analyze performance data, check the configuration of HTnM, and wait until performance data is collected or refresh performance data by manually.
KAIC71008-E	Performance data is not collected yet within specified time period. To analyze performance data within specified time period, wait until performance data is collected or refresh performance data by manually.	*Cause* - *Action* To analyze performance data within specified time period, wait until performance data is collected or refresh performance data by manually.
KAIC71009-W	Network Bandwidth is not set. To increase quality of performance analysis, set network bandwidth.	*Cause* - *Action* To increase quality of performance analysis, set network bandwidth.
KAIC71010-W	Network Bandwidth is not set. To increase quality of performance analysis, set network bandwidth. Ask a user with modify privilege to set network bandwidth.	*Cause* - *Action* To increase quality of performance analysis, set network bandwidth. Ask a user with modify privilege to set network bandwidth.
KAIC71011-E	Unable to find the specified copy group. The specified copy group might be deleted. Cancel the operation and verify the copy group list, then select valid copy groups.	*Cause* The specified copy group might be deleted. *Action*

Message ID	Message Text	Description
		Cancel the operation and verify the copy group list, then select valid copy groups.
KAIC71012-W	A memo could not be created because the size of the chart window is smaller than the size of the memo. To create a memo, enlarge the chart window.	*Cause* - *Action* To create a memo, enlarge the chart window.
KAIC71013-W	No more memos can be created. A maximum of *memo-writing-maximum* memos can be created for each analysis. To create more memos, delete any unnecessary memos. Some memos might have been created for metrics or time periods that are not currently displayed.	*Cause* - *Action* To create more memos, delete any unnecessary memos. Some memos might have been created for metrics or time periods that are not currently displayed.
KAIC71014-W	The number of characters has reached the limit. The maximum number of characters is *invalid-characters*.	*Cause* - *Action* The maximum number of characters is *invalid-characters*.
KAIC71017-E	The memo could not be saved. Verify whether the database has been started. If the database has not been started, re-start it, and then try again. If the database has been started, there might be an internal error. Please contact the Support Center.	*Cause* Verify whether the database has been started. *Action* If the database has not been started, re-start it, and then try again. If the database has been started, there might be an internal error. Please contact the Support Center.
KAIC71018-E	Memos could not be loaded. Verify whether the database has been started. If the database has not been started, re-start it, and then try again. If the database has been started, there might be an internal error. Please contact the Support Center.	*Cause* Verify whether the database has been started. *Action* If the database has not been started, re-start it, and then try again. If the database has been started, there might be an internal error. Please contact the Support Center.
KAIC71019-W	Some memos exist that are not displayed on the chart. To display these memos, change the time period.	*Cause* - *Action* To display these memos, change the time period.

Message ID	Message Text	Description
KAIC71020-I	Memos added to charts that include user-customized metrics are not applied to exported PDF reports.	*Cause* - *Action* -
KAIC71021-I	Are you sure you want to delete the memo?	*Cause* - *Action* -
KAIC71026-W	When [OK] button is clicked, all the saved memos, including the memos for other copy groups, will be deleted. Do you want to continue? If you want to save your memos, you should export a performance report before changing a chart.	*Cause* - *Action* -
KAIC71030-W	The performance data does not exist in the analysis period within a specified. It is possible that the software on Tuning Manager has not been configured to collect performance data, or the Tuning Manager Agent for RAID is out of date. If the version is earlier than *version*, upgrade to a later version of Tuning Manager Agent for RAID. If the software has not been configured to collect performance data, please do so.	*Cause* It is possible that the software on Tuning Manager has not been configured to collect performance data, or the Tuning Manager Agent for RAID is out of date. *Action* If the version is earlier than *version*, upgrade to a later version of Tuning Manager Agent for RAID. If the software has not been configured to collect performance data, please do so.
KAIC71031-E	No performance data which can be analyzed. Close dialog. To analyze performance data, check the configuration of Performance Advisor, and wait until performance data is collected or refresh performance data by manually.	*Cause* - *Action* Close dialog. To analyze performance data, check the configuration of Performance Advisor, and wait until performance data is collected or refresh performance data by manually.
KAIC71032-W	The performance data does not exist in the analysis period within a specified. It is possible that the software on Performance Advisor has not been configured to collect performance data, or the Performance Advisor is out of date. Message ID	Message Text	Description
	been configured to collect performance data, please do so.	If the software has not been configured to collect performance data, please do so.
KAIC71033-W	The R-JNL Transfer and Process Time threshold is not set. To increase quality of performance analysis, set R-JNL Transfer and Process Time threshold.	*Cause* - *Action* To increase quality of performance analysis, set R-JNL Transfer and Process Time threshold.
KAIC71034-W	The R-JNL Transfer and Process Time threshold is not set. To increase quality of performance analysis, set R-JNL Transfer and Process Time threshold. Ask a user with modify privilege to set these thresholds.	*Cause* - *Action* To increase quality of performance analysis, set R-JNL Transfer and Process Time threshold. Ask a user with modify privilege to set these thresholds.
KAIC71035-W	Network Bandwidth and the R-JNL Transfer and Process Time threshold are not set. To increase quality of performance analysis, set these thresholds.	*Cause* - *Action* To increase quality of performance analysis, set these thresholds.
KAIC71036-W	Network Bandwidth and the R-JNL Transfer and Process Time threshold are not set. To increase quality of performance analysis, set these thresholds. Ask a user with modify privilege to set these thresholds.	*Cause* - *Action* To increase quality of performance analysis, set these thresholds. Ask a user with modify privilege to set these thresholds.
KAIC71037-W	There is a copy group where the R-JNL Transfer and Process Time threshold is not set. The threshold is displayed on the graph as a horizontal line to help confirm there is a problem.	*Cause* - *Action* The threshold is displayed on the graph as a horizontal line to help confirm there is a problem.
KAIC71038-I	If a secondary storage system port being used by the copy group (*copygroupname*) is also being used as an external port, the Array Port Transfer Rate includes data transferred over the external path.	*Cause* - *Action* -
KAIC71039-E	The site could not be deleted. (target site = *sitename*) One or more storage systems are registered to the specified site. Move all registered storage	*Cause* One or more storage systems are registered to the specified site. *Action*

Message ID	Message Text	Description
	systems to a different site, and then try again.	Move all registered storage systems to a different site, and then try again.
KAIC71040-E	Specify a site name.	*Cause* - *Action* -
KAIC71041-E	The specified site name (*site-name*) is already in use.	*Cause* - *Action* -
KAIC71042-E	Specify a site name consisting of *minimum-length* to *maximum-length* characters.	*Cause* - *Action* -
KAIC71043-E	You cannot specify a site name that consists of only spaces.	*Cause* - *Action* -
KAIC71044-E	The site name contains an invalid character. The specifiable characters are alphanumeric characters (A-Z, a-z, and 0-9), spaces, and the following symbols: ` ~ ! " # $ % & ' ( ) * + , - . / : ; < = > ? @ [\\ ] ^ _ { | } Use only valid characters in the site name.	*Cause* - *Action* Use only valid characters in the site name.
KAIC71052-E	Some items that were already set are now inconsistent because settings for a volume were changed. If you changed the settings for the primary volume, then reconfigure the settings for the secondary volume. If no secondary volume can be selected, then create a new volume.	*Cause* - *Action* If you changed the settings for the primary volume, then reconfigure the settings for the secondary volume. If no secondary volume can be selected, then create a new volume.
KAIC71053-E	There are no storage systems that can be selected. Check the remote path settings of the storage system. If necessary, add a storage system by using the [Administration] tab.	*Cause* - *Action* Check the remote path settings of the storage system. If necessary, add a storage system by using the [Administration] tab.
KAIC71054-W	A Universal Replicator copy group could not be created,	*Cause*

Message ID	Message Text	Description
	because no two-way path exists between the specified storage systems.	- *Action* -
KAIC71055-E	The site could not be created. The maximum number of sites is *upper-limit*.	*Cause* The maximum number of sites is *upper-limit*. *Action* -
KAIC71056-E	The pair management server to which the command device of the selected storage system was assigned could not be found. Check the settings of the pair management server. If necessary, assign a command device to the server.	*Cause* - *Action* Check the settings of the pair management server. If necessary, assign a command device to the server.
KAIC71057-E	There are no available journal groups. Check the journal group settings. If necessary, set up a journal group.	*Cause* - *Action* Check the journal group settings. If necessary, set up a journal group.
KAIC71058-E	The specified UDP port number is already in use on the same pair management server. Specify a different UDP port number, and then try again.	*Cause* - *Action* Specify a different UDP port number, and then try again.
KAIC71059-E	The specified instance number is already in use on the same pair management server. Specify a different instance number, and then try again.	*Cause* - *Action* Specify a different instance number, and then try again.
KAIC71060-E	The specified UDP port number is already in use in the same copy topology. Specify a different UDP port number, and then try again.	*Cause* - *Action* Specify a different UDP port number, and then try again.
KAIC71062-E	There are no copy types that can be selected. The license for the program product of the storage system has not been correctly registered. Check the license status. If necessary, register a license.	*Cause* The license for the program product of the storage system has not been correctly registered. *Action* Check the license status. If necessary, register a license.
KAIC71063-E	The operation could not be performed, because Replication	*Cause*

	Manager is in maintenance mode. Change Replication Manager to normal mode, and then try again.	- *Action* Change Replication Manager to normal mode, and then try again.
KAIC71064-E	The selected volumes cannot be used as pair volumes. The selected volumes are already used in other copy pairs. Select different volumes, and then try again.	*Cause* The selected volumes are already used in other copy pairs. *Action* Select different volumes, and then try again.
KAIC71065-E	This field cannot be omitted. Specify a name.	*Cause* - *Action* Specify a name.
KAIC71066-E	The name contains an invalid character. Specify a name by using only alphanumeric characters (A-Z, a-z, and 0-9) and the following symbols: - _ . @	*Cause* - *Action* Specify a name by using only alphanumeric characters (A-Z, a-z, and 0-9) and the following symbols: - _ . @
KAIC71067-E	The name contains an invalid character. Specify a name by using only alphanumeric characters (A-Z, a-z, and 0-9), spaces, and the following symbols: - _ . @ : , \\ /	*Cause* - *Action* Specify a name by using only alphanumeric characters (A-Z, a-z, and 0-9), spaces, and the following symbols: - _ . @ : , \\ /
KAIC71068-E	The specified name is invalid. The name cannot start with a hyphen (-). Specify a different name, and then try again.	*Cause* The name cannot start with a hyphen (-). *Action* Specify a different name, and then try again.
KAIC71069-E	The snapshot group name is too long. Specify a snapshot group name that does not exceed *max-number* characters.	*Cause* - *Action* Specify a snapshot group name that does not exceed *max-number* characters.
KAIC71070-E	The Change Pair Status wizard could not be started. The statuses of copy pairs from different copy groups cannot be changed at the same time.	*Cause* The statuses of copy pairs from different copy groups cannot be changed at the same time.

Message ID	Message Text	Description
	Check and revise the selected copy pairs if necessary, and then try again.	*Action* Check and revise the selected copy pairs if necessary, and then try again.
KAIC71071-E	The host group could not be created. The WWN/iSCSI name of the host is already registered to an existing host group. Specify an existing host group, or revise the settings of the host.	*Cause* The WWN/iSCSI name of the host is already registered to an existing host group. *Action* Specify an existing host group, or revise the settings of the host.
KAIC71073-E	The operation could not be performed for the specified copy topology. The resources of the copy topology have been reserved in Replication Manager. Check the status of the resources in Replication Manager. If necessary, cancel the reservation of the resources in Replication Manager, and then try again.	*Cause* The resources of the copy topology have been reserved in Replication Manager. *Action* Check the status of the resources in Replication Manager. If necessary, cancel the reservation of the resources in Replication Manager, and then try again.
KAIC71075-E	There are no allocated volumes. If necessary, create volumes and allocate them to hosts. Then, try again.	*Cause* - *Action* If necessary, create volumes and allocate them to hosts. Then, try again.
KAIC71076-E	The same CTG ID is specified for more than one local copy group. Check and, if necessary, revise the CTG ID. Then, try again.	*Cause* - *Action* Check and, if necessary, revise the CTG ID. Then, try again.
KAIC71077-E	The same MU number is specified for more than one local copy group. Check and, if necessary, revise the MU number. Then, try again.	*Cause* - *Action* Check and, if necessary, revise the MU number. Then, try again.
KAIC71078-E	The selected alert cannot be handled by this operation. Complete the task using Replication Manager.	*Cause* - *Action* Complete the task using Replication Manager.
KAIC71079-E	Settings for a host group are invalid. If a host group that has the WWN or iSCSI name of the host exists in the specified storage port, specify that host	*Cause* - *Action*

Message ID	Message Text	Description
	group. Otherwise, if no host group has a WWN or iSCSI name specified, then create a new host group.	If a host group that has the WWN or iSCSI name of the host exists in the specified storage port, specify that host group. Otherwise, if no host group has a WWN or iSCSI name specified, then create a new host group.
KAIC71080-E	Both an IPv4 address and an IPv6 address are selected for [Host Name/IP Address] in the settings of the primary pair management server and secondary pair management server. Use only IPv4 addresses or only IPv6 addresses for the primary and secondary pair management servers.	*Cause* - *Action* Use only IPv4 addresses or only IPv6 addresses for the primary and secondary pair management servers.
KAIC71081-E	The specified instance number is already being used in the same copy topology. Revise the settings for the instance number. If the same instance is to be used for the pair management server, then set the instances so that they both use the same host name/IP address and UDP port number.	*Cause* - *Action* Revise the settings for the instance number. If the same instance is to be used for the pair management server, then set the instances so that they both use the same host name/IP address and UDP port number.
KAIC71082-E	You can create up to three ShadowImage copy groups that share the same primary volume.	*Cause* - *Action* -
KAIC71083-E	The Change Pair Status wizard could not be started. The copy group or copy pair related to the selected alert has been deleted.	*Cause* The copy group or copy pair related to the selected alert has been deleted. *Action* -
KAIC71084-E	The same pair management server and instance number are specified for both the primary and secondary sides. Change the specified pair management server and instance number. To use the same pair management server on both the primary and secondary sides, specify different instance numbers.	*Cause* - *Action* Change the specified pair management server and instance number. To use the same pair management server on both the primary and secondary sides, specify different instance numbers.
KAIC71085-E	The specified copy group name cannot be used. A copy group	*Cause*

Message ID	Message Text	Description
	that has the same name has already been registered for the specified instance. Change the copy group name or specify a different instance number.	A copy group that has the same name has already been registered for the specified instance. *Action* Change the copy group name or specify a different instance number.
KAIC71086-E	The specified snapshot group name cannot be used. A snapshot group that has the same name has already been registered in the storage system. Specify a different snapshot group name.	*Cause* A snapshot group that has the same name has already been registered in the storage system. *Action* Specify a different snapshot group name.
KAIC71087-E	The same storage systems were selected. Select different storage systems.	*Cause* - *Action* Select different storage systems.
KAIC71088-E	The volume cannot be allocated as a global-active device pair volume because the LUN path is configured to use iSCSI ports.	*Cause* - *Action* -
KAIC71089-E	Processing is taking a long time. After closing this dialog box, wait a while and then click [Refresh Display] to check the current status.	*Cause* - *Action* After closing this dialog box, wait a while and then click [Refresh Display] to check the current status.
KAIC71090-E	There are no registered storage systems. If no storage systems are registered, add one in the [Administration] tab. To set up a storage system that is managed by a Device Manager at a remote site, click [Add Device Manager].	*Cause* - *Action* If no storage systems are registered, add one in the [Administration] tab. To set up a storage system that is managed by a Device Manager at a remote site, click [Add Device Manager].
KAIC71091-E	An alert could not be set for the snapshot group.	*Cause* - *Action* -
KAIC71092-E	The specified host group or iSCSI target is already registered with the selected storage port. Enter a different name.	*Cause* - *Action* Enter a different name.

Message ID	Message Text	Description
KAIC71093-E	A LUN path setting is invalid. More than one WWN or iSCSI name is included in the selected host group or iSCSI target. Add LUN paths for all hosts that will use the host group or iSCSI target. If necessary, revise the configuration of the host group or iSCSI target.	*Cause* More than one WWN or iSCSI name is included in the selected host group or iSCSI target. *Action* Add LUN paths for all hosts that will use the host group or iSCSI target. If necessary, revise the configuration of the host group or iSCSI target.
KAIC71094-E	There are no selectable storage systems. The number of storage systems that can be created by the target copy topology is insufficient. Check the license, and register it if necessary. Add storage systems if storage systems are not registered for Device Manager.	*Cause* The number of storage systems that can be created by the target copy topology is insufficient. *Action* Check the license, and register it if necessary. Add storage systems if storage systems are not registered for Device Manager.
KAIC71095-E	You cannot use the specified storage system. You did not complete configuring the following resources: 1. Bidirectional Remote Paths 2. Quorum Disks 3. Virtual Storage Machines Configure the resources by using Set up Replication/GAD.	*Cause* You did not complete configuring the following resources: 1. Bidirectional Remote Paths 2. Quorum Disks 3. Virtual Storage Machines *Action* Configure the resources by using Set up Replication/GAD.
KAIC71096-W	The number of available LDEV IDs is insufficient, or available LDEV IDs cannot be obtained. Register an LDEV ID for virtual storage machine, or use an existing volume. If the storage system is managed by a remote instance of Device Manager, then the version of Device Manager must be v8.2.1 or later.	*Cause* - *Action* Register an LDEV ID for virtual storage machine, or use an existing volume. If the storage system is managed by a remote instance of Device Manager, then the version of Device Manager must be v8.2.1 or later.
KAIC71097-E	You cannot use the specified host group. The specified host group and volume are in different virtual storage machines. Set another host group name.	*Cause* The specified host group and volume are in different virtual storage machines. *Action* Set another host group name.
KAIC71098-E	A quorum disk could not be created because multiple volumes are specified. Please select only one volume.	*Cause* - *Action*

Message ID	Message Text	Description
		Please select only one volume.
KAIC71099-E	Specify a copy topology name consisting of 1 to 64 characters.	*Cause* - *Action* -
KAIC71100-E	You cannot specify a copy topology name that consists of only spaces.	*Cause* - *Action* -
KAIC71101-E	There are no secondary volumes that can be set for the primary volume. Select volumes that meet the conditions.	*Cause* - *Action* Select volumes that meet the conditions.
KAIC71102-E	A primary volume that does not have a candidate secondary volume, exists. An insufficient number of volumes meet the conditions. Create a new volume or revise an allocated volume, and then click the [Select Secondary Volumes] button again.	*Cause* An insufficient number of volumes meet the conditions. *Action* Create a new volume or revise an allocated volume, and then click the [Select Secondary Volumes] button again.
KAIC71103-E	This operation cannot be performed for the selected volumes. The target volume is already virtualized, or an external path was assigned. If the volume for the quorum disk is already virtualized, select other volumes. If you want to virtualize volumes assigned to the external ports of the primary or secondary storage system, either release the path and try again, or select [Use an unmanaged external storage system] in [Configure Quorum Disks] of [Set up Replication/ GAD] to virtualize volumes.	*Cause* The target volume is already virtualized, or an external path was assigned. *Action* If the volume for the quorum disk is already virtualized, select other volumes. If you want to virtualize volumes assigned to the external ports of the primary or secondary storage system, either release the path and try again, or select [Use an unmanaged external storage system] in [Configure Quorum Disks] of [Set up Replication/GAD] to virtualize volumes.
KAIC71104-W	The host mode (and host option) of the primary host cannot be applied to a new host group or iSCSI target. The host modes (or host mode options) of the host groups or iSCSI targets differ between the selected primary volumes. Alternatively, the secondary storage system does not	*Cause* The host modes (or host mode options) of the host groups or iSCSI targets differ between the selected primary volumes. Alternatively, the secondary storage system does not support the settings of one or more primary volumes. *Action*

Message ID	Message Text	Description
	support the settings of one or more primary volumes.	-
KAIC71105-W	The asymmetric access status cannot be set. The Device Manager instance (service) at the remote site (*device-manager*) has not been started, or the version is old. Make sure that the Device Manager service is running. If necessary, update the Device Manager version, and then try again.	*Cause* The Device Manager instance (service) at the remote site (*device-manager*) has not been started, or the version is old. *Action* Make sure that the Device Manager service is running. If necessary, update the Device Manager version, and then try again.

KAIC90000 - KAIC99999

The following table describes messages KAIC90000 to KAIC99999, which are related to the Device Manager CLI. Unless stated otherwise, *server* refers to the Hitachi Command Suite management server.

Table 2-15 KAIC90000 - KAIC99999 (messages related to the Device Manager CLI)

Message ID	Message Text	Description
KAIC90000-E	An internal error occurred in CLI.	Contact the Support Center.
KAIC90001-E	Malformed key/value pair: *specified-key-value* (must be in the form key=value)	Revise the specification.
KAIC90002-E	Malformed parameter key: *specified-key-value* (must be in the form key=value)	Revise the specification.
KAIC90003-E	Malformed parameter value: *specified-key-value* (must be in the form key=value)	Revise the specification.
KAIC90004-E	An argument is required for the option *specified-option*.	Revise the specification.
KAIC90005-E	The option "*specified-option*" is not valid.	Revise the specification.
KAIC90006-E	Value of *key-name* must be an integer; could not parse *specified-value*	Revise the specification.
KAIC90007-E	An invalid value "*parameter-value*" has been specified for parameter "*parameter-name*".	Revise the specification, and then try again.

Message ID	Message Text	Description
KAIC90008-E	An invalid value "*parameter-value*" has been specified for parameter "*parameter-name*".	Revise the specification, and then try again.
KAIC90009-E	"LogicalUnit" must be specified in parameter "*error-parameter-name*" before using parameter "*related-parameter-name*".	Revise the specification.
KAIC90010-E	An invalid value "*parameter-value*" has been specified for parameter "*parameter-name*".	Revise the specification, and then try again.
KAIC90011-E	Value of channelspeed must be an integer. You entered "*specified-value*".	Revise the specification.
KAIC90012-E	Cannot query Logical Group for contained elements of type "*element-type*".	Revise the specification.
KAIC90013-E	Model = *model-name* not supported.	Revise the specification.
KAIC90014-E	Parameter "wwn" must have at least two WWNs.	Revise the specification.
KAIC90015-E	The list element *element-name* could not be added to the Host as a WWN.	Revise the specification.
KAIC90016-E	If either serial number or model is specified for an array, both must be specified.	Revise the specification.
KAIC90017-E	Value of devnums must be a positive integer. You entered "*specified-devnums-value*".	Revise the specification.
KAIC90018-E	Value of devnum must be a positive integer. You entered "*specified-devnum-value*".	Revise the specification.
KAIC90019-E	Could not translate to a WWN from *wwn-string*: *detail-message*	Revise the specification.
KAIC90020-E	There is no way to make a WWN for "*management-object*".	Revise the specification.
KAIC90021-E	The object type cannot be determined.	Revise the specification, and then try again.
KAIC90022-E	The specified object is not a path.	Revise the specification, and then try again.
KAIC90023-E	An invalid value "*parameter-value*" has been specified for parameter "*parameter-name*".	Revise the specification, and then try again.

Message ID	Message Text	Description
KAIC90024-E	"*parameter-name*" must be specified in parameter "*relation-paramater-name(1)*" before using parameter "*relation-paramater-name(2)*".	Revise the specification.
KAIC90025-E	Cannot query *parameter-name* without *relation-paramater-name(1)* in *relation-paramater-name(2)*.	Revise the specification.
KAIC90026-E	"*model-name*" is not a model name recognized by Device Manager CLI.	Revise the specification.
KAIC90027-E	The model does not support the command "*specified-command*".	Revise the specification, and then try again.
KAIC90028-E	Modifying Option Definitions while parsing is illegal.	If the problem persists, contact the Support Center.
KAIC90029-E	Option already defined using character "*define-option-character*" - *existing-option-name*; cannot define option *define-option-name*	Contact the Support Center.
KAIC90030-E	Option already defined long option "*define-option-name*" - *existing-option-character*; cannot define *define-option-character*	Contact the Support Center.
KAIC90031-E	Could not correctly parse xml to determine service.	Revise the specified XML.
KAIC90032-E	Bad URL.	Revise the specified URL.
KAIC90033-E	Invalid response received.	Contact the Support Center.
KAIC90034-E	Could not correctly parse response xml.	Contact the Support Center.
KAIC90035-E	An error occurred while receiving a response. Make sure the URL is correct, and the server is usable. Cause: *URL*	Revise the options, URL, and server settings. Make sure that the URL host name is the same as the host name set on the server. If an error still occurs, contact the Support Center.
KAIC90036-E	Unexpected error.	Contact the Support Center.
KAIC90037-E	Invalid Virtual List String - String is null or length is zero.	Contact the Support Center.
KAIC90038-E	Invalid Virtual List String - length must be even.	Contact the Support Center.
KAIC90039-E	Invalid Virtual List String - string not in hex format.	Contact the Support Center.

KAIC90091-E	Must supply a URL from the command line or in the properties file.	Revise the specification.
KAIC90092-E	Could not read password from file *password-file-name*.	Revise the contents of the password file.
KAIC90093-E	Could not find the password file *password-file-name*.	Revise the password file specification.
KAIC90094-E	Error reading the password file *password-file-name*: *cause*	Make sure the status of the password file is correct.
KAIC90095-E	Certificate from Server shows a hostname of *cert-host-name*, but the response is actually from *url-host-name*.	Revise the specification.
KAIC90096-E	Could not open the file *output-redirect-file-name* for writing the output.	Make sure the user has permission to access the specified file.
KAIC90097-E	An attempt to read the property file "*property-file-name*" has failed.	Revise the file specification, and then try again.
KAIC90099-E	Error reading *property-file-name* from executing directory.	Check and, if necessary, revise the specified path setting and the status of the file, and then make sure the file can be accessed.
KAIC90100-E	An attempt to read the property file "*property-file-name*" has failed.	Revise the file specification, and then try again.
KAIC90101-E	Executing with no *property-file-name* Property File.	Revise the specification.
KAIC90102-E	Unrecognized command: *command-name*	Revise the specification.
KAIC90103-E	For the *command-name* command, the *key* value must be specified.	Revise the specification.

Message ID	Message Text	Description
KAIC90104-E	For the *command-name* command, the *item-option-name(1)* or the *item-option-name(2)* must be specified.	Revise the specification.
KAIC90105-E	For the *command-name* command, both the *item-option-name(1)* and the *item-option-name(2)* can not be specified together.	Revise the specification.
KAIC90106-E	Specified parameters not appropriate for the command:	Revise the specification.
KAIC90107-E	Family = *model-name* not recognized;	Revise the specification.
KAIC90108-E	Subtarget *specified-subtarget* not recognized; currently supporting: *storage-array-subtarget-names*	Revise the specification.
KAIC90109-E	PDEV devnum from the *key-name* was not an integer: *specified-pdevnums*	Revise the specification.
KAIC90110-W	HDvM does not support iSCSIName in a virtualization server. If the iSCSIName is set, this registers it as a normal host. (HostName=*hostName*, function=*function*)	If the function = check and you want to register the target host as a virtualization server, then delete the iSCSIName from the host information file. If you want to register it as a normal host, then no action is required.If the function = import, then the target host is registered as a normal host. If you want to register it as a virtualization server, then change it to be a virtual server by using the host edit function.
KAIC90111-E	You cannot specify both hostType and osType at the same time. Please specify one or the other.	Please try again, and specify either osType or hostType.
KAIC90112-E	In the *command-name* command, when specifying *specified-operand*, you have to specify *not-specified-operand*.	Revise the specification.
KAIC90113-E	The "*attribute-name(channel-speed)*" command is not supported on this subsystem.	Revise the specification, and then try again.
KAIC90114-E	Value of *key* must be either true or false; the value *specified-value* is neither.	Revise the specification.
KAIC90115-E	The object type cannot be determined.	Revise the specified groupelements, and then try again.

Message ID	Message Text	Description
KAIC90116-E	Parameters wwn and domain cannot both be specified.	Revise the specification, and then try again.
KAIC90117-E	Either devnum or lusedevnums must be specified.	Revise the specification.
KAIC90118-E	Parameter *option-name(1)* ignored, using *option-name(2)* for LUSE definition.	Revise the specification.
KAIC90119-E	"*option-name(1)*" and "*option-name(2)*" can not be specified together.	Revise the specification.
KAIC90120-E	When "*option-name(1)*", "*option-name(2)*", "*option-name(3)*"(or "*option-name(4)*") and "*option-name(5)*" are specified, they must be specified together.	Revise the specification.
KAIC90121-E	When "*option-name(1)*", "*option-name(2)*", "*option-name(3)*" and "*option-name(4)*" are specified, they must be specified together.	Revise the specification.
KAIC90122-E	The objectid is required when either "*option-name(1)*" or "*option-name(1)*" is specified with "*option-name(2)*".	Revise the specification.
KAIC90123-E	Date-Time entered (*specified-value*) not in the required format: YYYY/MM/DD HH:MM:SS	Revise the specification.
KAIC90124-E	Duplicate execution is not allowed: RefreshStorageArrays	Wait until the executing command finishes, and then try again.
KAIC90125-E	The value specified for osType is invalid. (osType=*osType*)	Try again after reviewing the specifications.
KAIC90126-E	The value specified for hostType is invalid. (hostType=*hostType*)	Try again after reviewing the specifications.
KAIC90127-E	Unrecognized option "*option-name*".	Revise the specification.
KAIC90128-E	Option *option-name* requires an argument.	Revise the specification.
KAIC90129-E	*option-name* is in the longOptionMap. But not in the charOptionMap under *option-character*.	Contact the Support Center.
KAIC90130-E	*option-name* is in the charOptionMap. But not in the longOptionMap.	Contact the Support Center.

Message ID	Message Text	Description
KAIC90131-E	Problem accessing the Device Manager datatype.	Contact the Support Center.
KAIC90132-E	Value of *key-name* must be a long; could not parse *specified-value*	Revise the specification.
KAIC90133-E	The CLI initialization information is invalid.	Contact the Support Center.
KAIC90134-E	Invalid character was detected in the specified userid or password.	Revise the specification.
KAIC90135-E	The number of values of "*parameter-name*" and "*parameter-name*" must be same.	Revise the specification.
KAIC90136-E	The certificate file ("*specified certificate file path*") does not exist in the specified path, or the certificate file is invalid.	Make sure the certificate file is in the specified path and is valid. If you cannot identify the cause of the problem, download the certificate file again.
KAIC90137-E	The certificate file ("*default certificate file path*") does not exist in the default path, or the certificate file is invalid.	Make sure the certificate file is in the default path and is valid. If you cannot identify the cause of the problem, download the certificate file again.
KAIC90138-E	When the -s option is used, URLs must start with https.	Make sure the specified option and URL are correct.
KAIC90139-E	A connection cannot be established. (reason = "*reason why the connection cannot be established*")	Take action based on the cause output to the message, and also make sure that the Device Manager server is running properly. If the message is output due to a temporary network error during a command execution, wait a while, and then check the configuration information because Device Manager server may have already processed command execution requests.
KAIC90140-E	The specified objectID "*specified objectID*" is invalid.	Make sure the objectID is correct.
KAIC90141-E	The API version "*specified-API-version*" specified in the XML request is invalid.	Revise the API version specification.
KAIC90142-E	An internal error occurred. The CLI API version "*CLI-API-version*" is invalid.	Contact the Support Center.
KAIC90143-E	The API version "*specified-API-version*" specified in the XML request exceeds the highest usable version "*highest-usable-version*".	Revise the API version specification.

Message ID	Message Text	Description
KAIC90144-E	Both "*Parameter name (1)*" and "*Parameter name (2)*" must be specified.	Revise the specification, and then try again.
KAIC90145-E	The model of the subsystem must be specified when the parameter "*Parameter name*" is specified.	Revise the specification, and then try again.
KAIC90146-E	An invalid value "*parameter-value*" has been specified for parameter *parameter-name*.	Revise the specification, and then try again.
KAIC90147-E	An invalid value "*parameter-value*" has been specified for parameter *parameter-name*. Specify the value by using an integer, CU:LDEV syntax or LDKC:CU:LDEV syntax.	Revise the specification, and then try again.
KAIC90148-E	An invalid value "*parameter-value*" has been specified for parameter *parameter-name*. Specify the value by using an integer (decimal or hexadecimal).	Revise the specification, and then try again.
KAIC90149-E	Specify either "arraygroupname" or "chassis" and "groupnum".	Revise the specification, and then try again.
KAIC90150-E	"arraygroupname" cannot be specified together with "chassis" and "groupnum".	Revise the specification, and then try again.
KAIC90151-E	Specify either "*Parameter name (1)*" or "*Parameter name (2)*".	Revise the specification, and then try again.
KAIC90152-E	Information in the message was omitted because the message is too long. The original message is as follows:	No action is required.
KAIC90153-E	The object ID of the host or the host name cannot be specified at the same time as the filter used for selecting the host.	Revise the specification, and then try again.
KAIC90154-E	An invalid value "*parameter-value*" has been specified for parameter *parameter-name*.	Revise the specification, and then try again.
KAIC90155-E	When "*parameter-value*" is specified for "*parameter-name*", you must specify the value for "*parameter-name*".	Revise the specification, and then try again.
KAIC90156-E	When "*parameter-value*" is specified for "*parameter-*	Revise the specification, and then try again.

Message ID	Message Text	Description
	name", you cannot specify the value for "*parameter-name*".	
KAIC90157-E	For this model, *parameter-value* cannot be specified for *parameter-name*.	Revise the specification, and then try again.
KAIC90158-E	If "*parameter-name*" is omitted, "*parameter-name*" cannot be used.	Revise the specification, and then retry the operation.
KAIC90159-E	The user ID or password is not specified. Specify a user ID and password to discover the specified subsystem.	Revise the specified values.
KAIC90160-E	The parameter param0 cannot be specified for this model.	Revise the specification.
KAIC90161-E	The parameter param0 must be specified for this model.	Revise the specification.
KAIC90162-E	If the parameter param0 is omitted, the parameter param1 must be specified.	Revise the specification.
KAIC90163-E	Specify one of the following: *parameter-name*, *parameter-name*, *parameter-name*, *parameter-name*, *parameter-name*, *parameter-name*, *parameter-name*, *parameter-name*, *parameter-name*, or *parameter-name*.	Revise the specification.
KAIC90164-E	The "*command-name*" command is not supported on this model.	Revise the specification.
KAIC90165-E	Specify one of the following: *parameter-name*, *parameter-name*, *parameter-name*, *parameter-name*, or *parameter-name*.	Revise the specification.
KAIC90167-E	"*hostname*" is not recognized as a virtualization server.	Revise the specified host.
KAIC90168-E	This command is not supported on virtualization server.	Use RefreshVirtualizationServer to refresh the virtualization server.
KAIC90169-E	No virtualization server or the management software managing the virtualization servers could be detected.	Revise the parameter settings and the virtualization software settings.
KAIC90170-E	The parameter "*parameter-name*" cannot be specified for this Host.	Revise the specification, and then retry the operation.

Message ID	Message Text	Description
KAIC90171-E	The "*specified-command*" command is not supported on this Host.	Revise the specification, and then retry the operation.
KAIC90180-E	The length of the "*parameter-name*" parameter is outside the valid range from "*minimum-value*" to "*maximum-value*".	Specify a valid value.
KAIC90181-E	When "*option-name(1)*","*option-name(2)*" and "*option-name(3)*" are specified, they must be specified together.	Revise the specification, and then try again.
KAIC90182-E	The specified parameter "*Parameter-Name*" is not appropriate.	Revise the specification.
KAIC90183-E	The "*Parameter-Name*" parameter cannot be specified for this microcode version. The minimum required microcode version is "*Microcode-Version*".	Revise the specification.
KAIC90184-E	Specify one of the following: "*parameter-name*", "*parameter-name*", or "*param-name*".	Revise the specification.
KAIC90185-E	Processing to delete the pool and format volumes completed successfully, but one or more volumes are blocked.	Refresh the storage system, and then reformat the blocked volumes.
KAIC90186-E	Processing to delete the pool and format volumes completed successfully, but one or more volumes were changed by another operation.	Refresh the storage system.
KAIC90187-E	Specify at least one of the following: "*parameter-name-1*", "*parameter-name-2*", "*parameter-name-3*", and "*parameter-name-4*".	Specify the required parameters, and then try again.
KAIC90188-E	Specify one of the following: "*parameters*".	Specify the required parameters, and then try again.
KAIC90189-E	Invalid parameters: CLPR-number and other modify parameters cannot be specified at the same time.	Specify the required parameters, and then try again.
KAIC90190-E	"*vmodel-name*" is not a vmodel name recognized by Device Manager CLI.	Revise the specification.

Message ID	Message Text	Description
KAIC90191-E	The specified SVP is not managing any storage systems.	Register a storage system to the SVP, and then try again.
KAIC90192-E	This version of the CLI does not support using a single SVP to manage mulitple storage systems.	Use the most recent version of the CLI.
KAIC90200-E	The number of "iscsiname" values must match the number of "iscsinickname" values.	Revise the specification, and then retry the operation.
KAIC90201-E	The string "*element-name*" could not be added to the host as an iSCSIName.	Revise the specification, and then retry the operation.
KAIC90202-E	An attempt to add the iSCSIName "*error-iSCSIName*" has failed.	Revise the specification, and then retry the operation.
KAIC90203-E	The same iSCSIName "*iSCSIName*" is already specified in the parameter.	Revise the specification, and then retry the operation.
KAIC90204-E	The iSCSIName cannot be specified for the instance "*management-object*".	Revise the specification, and then retry the operation.
KAIC90205-E	Specify one of the following: "*parameter-name*", "*parameter-name*", "*parameter-name*", "*parameter-name*", or "*parameter-name*".	Revise the specification.
KAIC90500-E	Options "-b" and "-i" cannot be specified at the same time.	Revise the specification.
KAIC90501-E	A command or parameter cannot be specified when option "-b" is specified.	Revise the specification.
KAIC90503-E	Both "*Command name*" and "*Command name*" are included in the command specifications in the specified batch file. Only one of these commands can be included in the batch file.	Revise the contents of the batch file.
KAIC90504-E	The number of commands that can be included in the batch file is "*Number*".	Revise the contents of the batch file.
KAIC90505-E	A command "*Command-Name*" that cannot be executed by batch execution has been coded in the batch file.	Revise the contents of the batch file.
KAIC90506-E	The specified batch file cannot be found.	Revise the batch file specification.

Message ID	Message Text	Description
KAIC90507-E	An attempt to read the specified batch file has failed. Remove the cause of the problem, and then re-execute the batch file. Cause: "*Message*"	Remove the cause of the problem, and then re-execute the batch file.
KAIC90508-E	No command has been coded in the batch file.	Revise the contents of the batch file.
KAIC90509-E	The commands coded in the batch file must be for a single subsystem.	Revise the contents of the batch file.
KAIC90510-E	The batch file contains invalid coding in line *Line-Number*.	Revise the contents of the batch file.
KAIC90511-E	An error occurred while reading the batch file. Revise the coding in the batch file, and then re-execute the batch file. Line:*Line-Number* Cause: *Message*	Revise the contents of the batch file, and then try again.
KAIC90512-E	The specified parameter "*Parameter-Name*" is not appropriate for the command "*Command-Name*".	Revise the specification.
KAIC90513-E	The specification of parameter "*Parameter-Name*" is duplicated in the command.	Revise the specification.
KAIC90550-E	There is an error in the syntax of the batch file coding.	Revise the contents of the batch file.
KAIC90551-E	The coding that follows the endbatch line is invalid.	Revise the contents of the batch file.
KAIC90552-E	The beginbatch line is not coded.	Revise the contents of the batch file.
KAIC90553-E	A command or endbatch line is not specified.	Revise the contents of the batch file.
KAIC90556-E	The coding in the beginbatch line is invalid.	Revise the contents of the batch file.
KAIC90557-E	The coding in the endbatch line is invalid.	Revise the contents of the batch file.
KAIC90559-E	A space character is required before the command name.	Revise the contents of the batch file.
KAIC90560-E	Characters other than alphanumeric characters cannot be used in a command name.	Revise the contents of the batch file.
KAIC90562-E	The batch file contains invalid coding.	Revise the contents of the batch file.

Message ID	Message Text	Description
KAIC90563-E	Characters other than alphanumeric characters cannot be used in a parameter name.	Revise the contents of the batch file.
KAIC90564-E	The parameter specification is invalid. The parameter name is incorrect or the parameter has not been specified using the "parameter-name=value" syntax.	Revise the contents of the batch file.
KAIC90565-E	An invalid character is being used in the parameter value. Only ASCII characters can be used. Escaping by "\" is required for spaces and symbols, except for: ",", "-", ".", "/", ":", "=", "_", ";".	Revise the contents of the batch file.
KAIC90566-E	Characters other than symbol characters cannot be escaped. The characters that can be escaped are: " ", "!", """, "#", "$", "%", "&", "'", "(", ")", "*", "+", "<", ">", "?", "@", "[", "\", "]", "^", "`", "{", "|", "}", "~".	Revise the contents of the batch file.
KAIC90569-E	A new line is required at the end of a statement.	Revise the contents of the batch file.
KAIC90570-E	The maximum number of characters that can be specified for a name, such as a parameter name, is "*Length*".	Revise the contents of the batch file.
KAIC90571-E	This is an invalid line. A line feed is required after a carriage return.	Revise the contents of the batch file.
KAIC90572-E	If you specify "*parameter-key-name*", you must also specify "*parameter-key-name*". If you specify "*parameter-key-name*", you must also specify "*parameter-key-name*".	Revise the command parameters, and then re-execute the command.
KAIC90573-E	If you specify "*parameter-key-name*" and "*parameter-key-name*", you must also specify "*parameter-key-name*" and "*parameter-key-name*".	Revise the command parameters, and then re-execute the command.
KAIC90574-E	The memory for the CLI became insufficient while this operation was being performed.	Take either of the following actions: • Increase the memory heap size for the CLI, and then perform the operation again.

Message ID	Message Text	Description
		• Decrease the amount of information to be collected, and then perform the operation again.
KAIC90575-E	The value of the "*parameter-key-name*" parameter is outside the valid range from "*minimum-value*" to "*maximum-value*".	Specify a valid value.
KAIC90576-E	The sum of startElementNumFilter and numOfElementsFilter is outside the valid range from "*minimum-value*" to "*maximum-value*".	Specify a valid value.
KAIC90577-E	The "*parameter-name-list*" and "*parameter-name-list*" parameters cannot be specified at the same time.	Revise the specification, and then retry the operation.
KAIC90600-E	An invalid value "*specified-value*" has been specified for the option "*specified-option*".	Revise the specification, and then retry the operation.
KAIC90601-E	The options "*specified-option*" and "*specified-option*" cannot be specified at the same time.	Revise the specification, and then retry the operation.
KAIC90602-E	The option "*specified-option*" and the command "*specified-command*" cannot be specified at the same time.	Revise the specification, and then retry the operation.
KAIC90603-E	The option "*specified-option*" and the parameter "*specified-parameter*" cannot be specified at the same time.	Revise the specification, and then retry the operation.
KAIC90701-E	The user ID specified for the option -u does not match the user ID in the property file *property-file-name*.	Specify the correct user ID at the command line.
KAIC90702-E	The password specified for [Old password] does not match the password in the property file *property-file-name*.	Specify the correct password at the command line. If the password in the property file cannot be specified correctly at the command line, delete the password from the property file, and then execute the command again.
KAIC90703-E	The passwords specified for [New password] and [Re-enter new password] are not the same.	Specify the correct password at the command line.
KAIC90704-E	An attempt to encode the password has failed.	Revise the execution environment, and then execute the command again. If the problem persists, please contact the Support Center.

Message ID	Message Text	Description
KAIC90705-E	An attempt to decode the password has failed.	Specify the correct user ID that corresponds to the password set in the password2 option. If the problem persists, please contact the Support Center.
KAIC90706-E	An attempt to decode the password failed because the current environment is different from the environment in which the password was encoded.	Delete the password in the property file, and then execute the command again.
KAIC90707-E	Command execution failed because the environment does not support the specific encoding algorithm.	Revise the execution environment, and then execute the command again. If the problem persists, please contact the Support Center.
KAIC90708-E	I/O processing for a file failed or was interrupted. (cause = *Message*)	Remove the cause of error by referring to the error information in the message, and then execute the command again.
KAIC90709-E	An invalid password was specified.	Check which characters are valid and the maximum number of characters for a password, and then specify a valid password.
KAIC90710-E	An attempt to encode or decode the password failed because the execution environment was invalid.	You do not have the permissions necessary to read a file required for executing a CLI command. Make sure the user account used to log in to the OS has the necessary permissions. If you cannot resolve the problem, contact the Support Center.
KAIC90711-E	An attempt to encode or decode the password failed because the execution environment was invalid.	Revise the execution environment, and then execute the command again. If the problem persists, please contact the Support Center.
